SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF AUGUST 1896.

WEATHER for August was unusually settled over the Bay and was marked by very distinct peculiarities in Bengal. The most important of these was the great absence of rainfall in the east of the province, and to a smaller extent in all other districts except Orissa, where there was a considerable excess. Along with the light rainfall and the comparatively clear skies temperature was as a rule above the normal, and the means for the month of both maximum and minimum readings are in considerable excess at nearly all stations. The main reasons for these irregularities in rainfall and temperature are not difficult to find, if the assumption be made that they are dependent on the pressure arrangement. This has been unusual in two respects (1) in the absence of depressions over either the north of the Bay or in Bengal, (2) in the tendency for pressure to be relatively higher in the north-east of the province as compared with the south-west, whereby the monsoon current received its westerly deflection further south than usual, that is, over the north of the Bay and in Lower Bengal instead of in East and North Bengal and the south of Assam.

It will be remembered that the weakness of the monsoon in 1895 was partly shown in the irregular distribution of the rainfall, there being in practically alternate months heavy rainfall in the north-east and light rainfall in the south-west or *vice versâ*. During the present year a similar irregularity is shown in an even more marked degree, but with the difference that the heavy rainfall has rarely penetrated to North Bengal, and at times it has been extremely scarce. In June the average fall in North Bengal was 49 per cent. of the normal, and in August it was only 39 per cent., while in July the fall was about normal.

In considering the rainfall distribution which depends very largely, especially in the latter half of the monsoon season, on atmospheric depressions, a distinction should be drawn between deep depressions over the Bay and shallow ones over the land. In years when the monsoon is weak the northern half of the province loses a portion of its rainfall by the occurrence of the former, as while they are over the Bay the indraught from the north is attended by fine and almost cloudless weather, and as they afterwards move to the west or north-west the easterly winds which they leave in Lower Bengal prevents the northward extension of the usual monsoon current. The shallow depressions, on the other hand, which begin generally over the land move to the north or north-west and cause heavy general rain. This is particularly noticeable if they break up on reaching the lower ranges of the Himalayas in the neighbourhood of Bihar or North Bengal. Their disappearance is followed almost immediately by thunderstorms and heavy rain over the plains near the hills.

During the month just past there was only one depression of any importance over the Bay, and it attained no great depth, and only one land depression which, though it caused a great deal of rain especially in Bihar at the end of the third weak, moved to the west out of the province before it finally broke up.

The pressure distribution which prevailed with two interruptions—one on the occasion of the land depression mentioned above and the other towards the end of the month when readings became low in North-East Bengal—was as follows: readings were lowest in Orissa or Chota Nagpur, from which they increased with somewhat greater rapidity towards the north-east than in average years. The isobars ran almost north and south or from north-west to south-east, an arrangement which caused winds more from the east than usual.

Weather conditions had just recovered from the effects of a disturbance in the north-west angle of the Bay at the end of July, but there was still a rather large defect in pressure. A moderate fall in Lower Bengal, Orissa, and the adjacent part of the Bay on the 1st of August caused a depression to form with its centre a little to the south or south-east of Saugor Island. The pressure gradient became much steeper both over the Bay and the province, because of the brisk fall in Orissa and the rapid rise in Burma and Assam. The centre of the disturbance moved rather slowly to the west and was near Balasore on the 2nd, but after that it either filled up or moved away more rapidly, as by the 3rd it had almost entirely ceased to affect the weather in Bengal. The increase of pressure on the 3rd was ·25 inch in Orissa and between ·1 and ·2 inch at all the south-western stations.

The stormy weather which the depression caused was confined largely to the west of the Bay, the strongest winds being reported from Gopalpur, and when the rapid rise of pressure occurred between 2nd and 3rd these strong winds soon moderated.

Heavy rain fell in the south of Orissa during the formation and passage of the disturbance, but only light showers were received in Lower Bengal, and very little in the northern districts. The rise of pressure which was so rapid on the 3rd continued in the western districts on the 4th, and by that time readings were above the normal by nearly ·1 inch. As the excess diminished towards the south the differences were sufficient to prevent the weak monsoon current which might have forced its way to the north of the

province. This arrangement continued for some days during which there was fine weather, with passing light showers in the south of the province.

On the 11th a very shallow depression formed in the north-west angle of the Bay off the coast of Orissa, where it developed slightly owing to a rapid fall of pressure on the 12th. The rise which followed on the 13th caused it to concentrate still near the Orissa coast which the centre crossed in a north-westerly direction in the course of the day between False Point and Balasore. Though gradients were fairly steep over the Bay weather was not disturbed to any great extent, and only light rainfall occurred in Bengal even after the depression had moved away.

By the 15th the pressure distribution had become approximately normal, and on the 16th the differences from the normal were only a few thousandths of an inch except in North Bengal and Assam, where there was still a small excess.

The changes then began which led to the land depression. A brisk fall of pressure prevailed on the 17th, changes being somewhat larger in the north-east. The easterly winds which had been a regular feature up till then changed to south in Lower Bengal, and westerly directions began to appear in Chota Nagpur and the west of Bihar. The slight low pressure area, of which this was an indication, developed very slowly and was each day more to the south till the 19th when the centre was in South-West Bengal, and the greatest defect in pressure was in the north-east of the Bay. It remained there on the 20th and then moved towards the north-west causing general and in places very heavy rainfall. On the 21st it was over the centre of the province, the heaviest falls of rain on that day being 5 inches at Saugor Island and Midnapore and 3 inches at Chaibassa. On the 22nd it was in Bihar, where general heavy rain was falling, especially in the western districts; and on the 23rd it had moved to the west out of the province.

During the last three days of the existence of the depression general heavy rain fell over nearly the whole province except Orissa, where it was almost rainless owing to the westerly land winds which at that time were blowing over Orissa. But it was in Bihar where its influence was most decided, as the rainfall during the rest of the month forms but a fraction of what fell between the 18th and 22nd, as may be seen by a reference to the table preceding this summary.

On the 24th lowest pressure was again in Orissa, and light easterly winds prevailed over the province. Pressure was in excess by small amounts, and remained so till the 28th, when the reversal began to take place by which the area of lowest pressure was transferred from Orissa to North Bengal. The fall on the 28th was brisk to rapid in North Bengal and Bihar, and slow on the 29th, by which time a moderate defect prevailed. The rise which followed was rapid in Bihar and the Circars and only moderate in North Bengal, so that readings were lowest at some of the northern stations, and isobars instead of running north and south or even north-west and south-east as they were in the early part of the month were now approximately east and west.

Westerly winds became general penetrating as far east as Sibsagar. Though showers continued, the rainfall was generally light, and in the early part of September gradually diminished as the system of westerly land winds became established over the province.

Pressure.—As stated above very few depressions occurred in August, and none of them were of much importance. There were two over the Bay and one inland. The first formed at the beginning of the month, close to the head of the Bay, the second somewhat further south, about the middle of the month. Both moved to the west or north-west and passed over only the south-western districts. The third at the end of the third week was a shallow land depression and had an important influence on the rainfall in the north of the province. As pressure has been almost uniformly low in the south-west as compared with the northern districts, the means for the month are considerably lower in Orissa and South-West Bengal than in North Bengal, where the means are nearly normal. Defect in Orissa is about ·04 inch, in South-West Bengal ·03 inch, in the central districts ·02 inch, and in Bihar ·015 inch.

Temperature.—Owing to the settled weather and the comparative absence of cloud and rainfall, temperature was with few interruptions above the normal, especially in North Bengal and Bihar, where means are largely in excess. Even in Orissa, where rainfall was above the normal, mean temperature is high, but only by about half a degree. In South-West Bengal, Chota Nagpur and Assam mean excess is about 1°, in East Bengal 1°·3, and in Bihar and North Bengal nearly 2°.

Mean maximum temperature is normal or slightly below the normal in Orissa, about 1° above in Lower Bengal and Chota Nagpur, and from 2° to 3° above in the northern districts. Mean night temperature is more uniform, but above the normal everywhere by amounts varying up 2° in the north of the province.

Rainfall was very deficient in North and East Bengal, and in considerable defect in all other districts except Orissa, where there was an average excess of more than 3 inches. The average fall in North Bengal was only 5·68 and in East Bengal 7·31 inches, less than 40 and 50 per cent. respectively of the normal fall in August. South-West Bengal received

8·4, Bihar 9·03, Chota Nagpur 11·8, and Orissa 15·31 inches. Thus instead of having about the heaviest rainfall North Bengal had the lightest in the province. Defect in Bihar and South-West Bengal was more than 3 inches, and in East and North Bengal between 8 and 9 inches.

Usually in August a considerable proportion of the rainfall at the various stations is caused by local thunderstorms, and consequently the falls are more irregular than in the earlier months of the monsoon season, but the same general arrangement obtains. The heaviest falls are in the south-east, south-west and north-east corners of the province, while the lightest are in a tract of country running diagonally across the province from south-east to north-west. Owing to the continued low pressure in Orissa and the north-west of the Bay, and the steady easterly winds, the heaviest rainfall during the month just past was largely confined to the south-west or Orissa, and from there the falls diminish steadily to almost the extreme north-east.

In Orissa the actual falls were generally between 10 and 15 inches, but in places were over 20 inches. In the south-west of Chota Nagpur most of the stations reported more than 15 inches, and the area over which 10 inches or more prevailed included almost the whole of Orissa, Chota Nagpur, and part of the west of Bihar. Part of South-West Bengal extending south-westwards from Calcutta, and small parts of South-East and North-East Bengal received more than 10 inches, but generally in the western half of Bengal proper and the greater part of Bihar falls were between 5 and 10 inches. Over large parts of East and North Bengal the falls were under 5 and in places under 3 inches.

The comparison of the actual rainfall in the various large divisions of the province with the normal is most accurately and conveniently shown in the form of a percentage. The figures representing the rainfall for the month, calculated in this way, are included in the table below under the heading of August. This table really gives a condensed summary of the rainfall statistics of the present year up to date for each meteorological division, the first eight columns giving the actual average rainfalls in each division in each month expressed as a percentage of the normal, while the ninth column gives the total rainfall for the first eight months expressed as a percentage of the normal rainfall for that period :—

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	July.	August.	Actual rainfall of first eight months of 1896 expressed as a percentage of the normal fall for the period.
South-West Bengal ...	31	18	18	36	97	128	95	71	89
North Bengal ...	8	5	2	63	142	49	106	39	75
East Bengal ...	48	110	43	94	115	99	72	46	80
Bihar ...	16	5	0	26	102	84	85	75	79
Orissa ...	3	0	50	31	78	162	131	128	122
Chota Nagpur ...	6	9	0	0	49	139	112	89	98

The following table gives full data for comparison of the actual and normal rainfal of the month of August in all districts of the province. The figures are derived from the average and actual rainfall of the rain-recording station in each district, due allowance or weight being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 25 years; the second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district; the third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage; the fourth column states as a percentage how much the district rainfall of the month varied from the normal;—

Percentage Table for August 1896.

RESOLUTION ON THE REPORT OF THE BOARD OF REVENUE ON THE ADMINISTRATION OF THE SALT DEPARTMENT FOR THE YEAR 1895-96.

FINANCIAL DEPARTMENT—SEPARATE REVENUE.

Darjeeling, the 11th September 1896.

RESOLUTION—No. 329T.F.

READ—

The Report of the Board of Revenue on the Administration of the Salt Department for the year 1895-96.

The chief administrative change during the year was the passing of the new Inland Bonded Warehouses Act, VIII of 1896, to provide for the establishment of bonded warehouses at places other than customs ports, and to afford facilities for the bonding of salt in such warehouses. The Act being permissive, salt dealers are at liberty to choose whether they will carry on operations as before under the old Act XXI of 1887, or whether they will avail themselves of the new system of removing and warehousing salt under time-bonds. The rules for working the Act are now under consideration. In 1894-95 private warehouses were established by Messrs. Turner, Morrison and Company at Khulna and Balasore: during the year under review the same firm obtained licenses for warehouses at Bhairab Bazar and Chandbali, and they are now arranging to open a fresh bonded warehouse at Narayanganj. The question of the retransfer of the administration of the Salt Department in Orissa from the Madras Board of Revenue to the Government of Bengal, is now under the consideration of the Government of India, together with other proposals which affect the general salt administration of the Province.

2. The following statement shows the receipts and charges of the Salt Department during each of the last six years:—

HEADS.	1890-91.	1891-92.	1892-93.	1893-94.	1894-95.	1895-96.	Increase in 1895-96 compared with 1894-95.	Decrease in 1895-96 compared with 1894-95.

TOTAL CHARGES ...	4,08,118	4,05,720	4,50,590	3,60,773	4,04,511	4,35,899	31,388	...
Approximate net revenue ...	2,31,22,905	2,37,00,568	2,38,80,839	2,34,59,470	2,42,97,855	2,46,68,408	3,70,553	...

3. The year shows a further increase of Rs. 4,01,941, or 1·6 per cent., in the receipts, and of Rs. 31,388, or 7·7 per cent., in the charges, the net revenue thus being higher by Rs. 3,70,553, or 1·5 per cent., than in the previous year. The salt revenue, in fact, has for the first time exceeded that collected in 1881-82, the last year in which the duty was levied at Rs. 2-14 per maund, when the net revenue amounted to Rs. 2,45,24,353. Under the head of import duty, a falling off at Calcutta and Chittagong was more than counterbalanced by the receipts from increased clearances at Balasore, Naraingunj, Chandbali, and the bonded warehouses at Khulna and Bhairab Bazar. The revenue from excise salt shows a material improvement owing to the larger sale of salt manufactured at the Government factories in Orissa. There was also a considerable advance in the proceeds from rent of warehouses, owing to the golas having been fully occupied during the year. The Provincial expenditure on account of salaries, warehouses and rewards shows a small increase of Rs. 626.

The Salt Trade.

4. The following statement shows the fluctuations in the volume of the salt trade in Bengal during the last ten years excluding salt imported by land from Ganjam and the Upper Provinces on which duty is not paid in Bengal:—

The stock of salt in the golas at the commencement of the year was over 36 lakhs of maunds, an amount far exceeding the opening stock of any of the ten previous years, and at the close of the year this had only been reduced by 92,330 maunds, since the sales during the year did not materially exceed the imports and local manufacture. The quantity of salt lying afloat in the port of Calcutta, ready to be sold direct to purchasers, which at the end of the preceding year amounted to 7,02,189 maunds, dropped during 1895-96 to 1,602 maunds.

Imports.

5. The combined imports into Calcutta and Chittagong show a net decrease of 26,08,816 maunds, or 20·2 per cent., as compared with the previous year. The decrease was confined to Calcutta, the imports into Chittagong showing the large increase of 2,42,648 maunds. The decline in Calcutta is attributed to the large stock brought forward from the previous year, combined with the low range of prices which prevailed throughout the year and the want of bonding space. The increase of imports into Chittagong is said to be due to the easy state of the Liverpool salt market, to larger sales expected on the opening of the Assam-Bengal Railway, and possibly to the fact that ships from salt-producing countries, which visited Chittagong for the export trade in rice and jute, and which in 1894-95 had come laden with railway plant, had more space to spare for salt at a lower rate of freight. The shipments of salt were received from the following countries:—

	1893-94.	1894-95.	1895-96.	Percentage of quantity imported for each group in 1893-94.	Percentage of quantity imported for each group in 1894-95.	Percentage of quantity imported for each group in 1895-96.

Shipments were received for the first time from Muhammad Goul, a port on the Red Sea, while Hamburg salt is reported to have fallen into disfavour with the traders, owing to the fact that if kept in the golas for any length of time, it hardens into a solid mass and is costly to remove. Regarding the demand for foreign salt, Mr. Baker, the Collector of Customs, Calcutta, furnishes figures which show that, while the consumption of Liverpool salt shows a decrease of over 4 lakhs during the year, there has been an increase of nearly 3¾ lakhs in the consumption of crushed salt both from shipboard and the golas. Mr. Baker writes:—

"Karkach salt, both crushed at the golas and that which is imported ready crushed from Aden, is gradually gaining ground and supplanting Liverpool salt. Karkach salt imported from Red Sea ports and crushed at the golas closely resembles Panga (Hamburg and Liverpool), and is sold at a much cheaper rate. At present the difference per 100 maunds between Liverpool and crushed Karkach is Rs. 20. There is no doubt that the dealers take advantage of the close resemblance between the two descriptions to pass off crushed Karkach as Liverpool or Hamburg, and also to mix the two descriptions of salt."

Clearance of salt.

6. Including 1,22,593 maunds of Bombay and Madras salt cleared free of duty in Calcutta, duty was paid on 64,64,797 maunds cleared from shipboard, against 69,40,855 maunds cleared in the previous year; while the clearances from bond rose from 34,81,646 to 39,01,585 maunds. Nineteen thousand four hundred maunds were cleared for the first time from the newly-established bonded warehouse at Bhairab Bazar, and the other warehouses at Khulna, Balasore and Chandbali show clearances of 19,650 and 92,694 maunds respectively, against 400 each in the previous year. On the whole, the total clearances of all kinds, including those of excise salt, fell from 1,04,61,216 to 1,04,41,017 maunds.

Consumption of salt.

7. Deducting from the above clearances the excess of exports from Bengal by land and river over the imports by the same routes, amounting to 9,07,518 maunds, and adding 33,964 maunds of saltpetre salt brought into use, the balance of salt left for consumption in the province fell from 97,80,674 maunds in 1894-95 to 95,67,463 in the year under review. The rate of consumption per head, after allowing for a yearly rate of increase of 7 per mille in the population since last census in place of the excessive rate of 10·45 per mille hitherto adopted works out to 4 seers 15 chitaks, against 5 seers 1 chitak in 1894-95. In the saliferous districts, excluding Orissa, there was a net decrease of 8,232 maunds in the consumption of licit salt, and the average consumption fell from 5 seers 4 chitaks to 5 seers 2 chitaks. As in 1894-95, the lowest rates were in Midnapore (4 seers 8 chitaks) and the 24-Parganas (4 seers 13 chitaks), the former district showing an increase of consumption as compared with the previous year. It is remarked that the figures for Midnapore do not represent the total consumption, since several large marts are situated close to the border of the saliferous tract and salt sold at these is consumed within salt law limits. In Midnapore, indeed, there is some question whether illicit manufacture for the purpose of sale prevails extensively enough to cause serious loss to the revenue; but Mr. Ashton's inquiries render it probable that a considerable amount of smuggling is carried on in the southern portion of the 24-Parganas, and this belief is strengthened by the Board's remarks in paragraph 17 of their report. It is there observed that the short rainfall rendered the high tides of autumn more saline than usual, and that this, coupled with deficient harvests, gave an impetus to illicit manufacture during the year under review. The Sundarbans and the country bordering on them afford special facilities not only for making illicit salt, but for conveying it into the interior of the 24-Parganas and the neighbouring districts through a network of rivers and khals which cannot be effectually watched by the ordinary police. The temporary employment of a special staff of police under a qualified Assistant Superintendent was lately sanctioned for the purpose of making an enquiry into the extent to which illicit manufacture in the southern portions of the 24-Parganas has been carried on, and the Commissioner of the Sundarbans was also instructed to enquire into and report on the same subject. The Lieutenant-Governor is awaiting the result of these enquiries. Various causes, which do not call for special notice, are assigned for the decline of consumption in the rest of the salt-bearing districts. Orissa shows

a slight falling off in consumption from 9·28 lbs. to 9·25 lbs.; the decrease, however, is more nominal than real, as the consumption appears to have been over-stated in 1894-95.

Price of salt.

8. Statements A and B appended to the Board's report give for the last two years the wholesale price of salt at monthly intervals in the bazars of district head-quarters, and at fortnightly intervals in certain selected marts. The prices on the whole were generally lower than in the previous year, the decrease being due to abundant supplies. The average wholesale price (exclusive of duty) of 100 maunds of Liverpool salt purchased from the ship's side in the port of Calcutta fell from Rs. 60-10-6 to Rs. 57-14, a decrease of 5 pies per maund, while the actual price ranged from Rs. 81-2-8 to Rs. 44-5-6. In explanation of this marked variation, the Collector of Customs observes:

"Owing to the action of certain importers during the year 1894-95, when it is believed that attempts were made to make a corner in salt, the imports were in excess of the demand, and all the available bonding space was monopolised. The effect of this was to compel other importers during a period of 1895-96 to sell their salt at a sacrifice from shipboard, no bonding space being available and there being no other alternative. The direct effect of this was that imports have been checked and the average price of Liverpool salt from the golas, which touched Rs. 45 per 100 maunds in the month of November 1895, has now risen to Rs. 83."

The average wholesale price including duty, at the nine chief marts of Bengal decreased from Rs. 3-9-1 to Rs. 3-7-5, or 1 anna 8 pies per maund. The corresponding average based on the wholesale prices of all the districts in Bengal fell from Rs. 3-12-10 to Rs. 3-11-1 per maund, a decline of 1 anna and 9 pies. From the foregoing figures the Board infer that while the dealer bought his salt from the importer at an average reduction of 5 pies only as compared with the previous year, he had to pass it on to the consumer at a reduction of 1 anna 9 pies, but this conclusion can hardly be pressed, as the average of prices at the ship's side relates only to Liverpool salt, while the average of wholesale prices quoted for the districts includes all the different kinds of salt, and moreover represents the sales, not to the actual consumers, but to the middlemen, from whom the consumers procure their supplies.

Inter-provincial trade.

9. The total imports from Madras the Upper Provinces and Assam of duty-paid salt fell from 4,29,120 to 3,83,940 maunds during the year, the decrease being due to the lower prices of foreign salt. For the same reason the exports from Bengal to Assam, Northern India, and Foreign States beyond the northern border, rose from 11,36,837 to 12,91,458 maunds, giving an excess over the imports of 9,07,518 maunds, against 7,07,717 maunds in 1894-95.

Working of the Salt Laws and Rules.

10. The number of cases in which contraband, salt was confiscated including those in the Orissa districts, fell from 1,098 to 504 during the past year, and the quantity confiscated from 296 to 161 maunds. In Midnapore there were 59 cases against 227 in the previous year, but the quantity seized amounted to 10-17-7 maunds, against 7-18-15 maunds in the previous year. Of this quantity, 8-2-1 maunds were seized in cases of illicit manufacture, and 2-15-8 maunds in cases of illicit possession and transport. In the 24-Parganas the quantity confiscated fell from 30-15-4 maunds to 20-36-14 maunds, 13-26-6 maunds having been seized for illicit manufacture and 7-10-8 maunds for illicit possession and transport In Orissa there was a decrease of 68·8 per cent. in the number of seizures and of 83·3 per cent. in the quantity of salt confiscated. The number of cases instituted in the Courts throughout Bengal was 506, chiefly for illicit manufacture and possession or transport, against 967 in 1894-95, a decrease occurring in all the salt districts except the 24-Parganas and Backergunge, which show an increase of 18 and 17 respectively. One of the reasons given by the Collector of Midnapore for the large decrease (146) in the number of cases instituted is the inadequacy of the detective establishment, but the Board point out that there has been no change in the strength of the establishment since 1894-95. The decline of 275 cases in Orissa is attributed by the Board "partly to the improved condition of the people and partly to constant patrols of the officers of the Salt Department and the punishments awarded by the Magistrates."

Of 72 cases sent up for trial with evidence of illicit manufacture in the Orissa districts, 15 were for the possession of earth-salt, 26 for the possession of salt-earth, and 31 for the possession of brine. Taking all the saliferous tracts together, there were 487 seizures and 101 unsuccessful searches against 1,054 and 134 respectively in the previous year. Out of a total of 513 persons apprehended, 469 were convicted, and the rewards disbursed amounted to Rs. 2,721.

Salt in Orissa.

11. In accordance with custom, the Board devote a separate part of their report to the administration of the Salt Department in Orissa. *Karkach* salt was manufactured under the direct management of Government at the factories of Gurubai and Tua on the Chilka Lake. The Madras Salt authorities give a good account of the Gurubai factory; but the quantity manufactured at Tua was only 53,214 maunds, against 92,307 in the previous year. At this factory the soil is said to be subject to constant saturation with fresh-water, and the climate is unsuitable for the manufacture of salt by solar evaporation, while the salt-makers (*mulangis*) are really agriculturists who only work at the factories when there is no work in the fields, and even then require an exceptionally high rate of remuneration. The Commissioner of Salt Revenue, Madras, and the Board of Revenue, Lower Provinces, recommend, however, that the decision of the question whether the factories on the Chilka should be abandoned should be deferred until the close of the current manufacturing season, and until it is known what effect the East Coast Railway will have on the sales of salt manufactured at these factories. The Lieutenant-Governor accepts this recommendation.

The receipts of the Orissa Salt Department rose from Rs. 1,06,406 to Rs. 2,05,432, while the expenditure fell from Rs. 1,54,023 to Rs. 1,48,880. The percentage of the charges to the receipts thus amounted to Rs. 72·4. The following statement shows the consumption of salt during the last five years, and its rate per head of the population, allowance being made for a yearly increase of 7 per mille upon the figures of the census of 1891:—

Year.	Sold from local manufactories.	Imported from Calcutta.	Imported from Ganjam.	Total consumption.	Rate per head.
1	2	3	4	5	6
	Mds.	Mds.	Mds.	Mds.	
1891-92 ...	18,866	2,51,971	4,48,071	7,13,908	10·15
1892-93 ...	81,329	2,76,408	3,37,423	6,95,160	9·82

1895-96 ...	74,635	2,99,836	2,94,326	6,68,797	9·25

12. The thanks of the Lieutenant-Governor are due to the Board for their careful supervision of the Department.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Govt. of Bengal.

WEATHER AND CROP REPORT.

For the week ending the 21st September, 1896.

Burdwan.—Rainfall at Sadar 5·54, Kalna 7·45, Katwa 3·56, Raniganj 3·55. Weather fair. Prospect of *aman* crop is most hopeful. There has been sufficient rainfall, and it has done considerable good to *aman* crop. Sugarcane doing well. Fodder and water sufficient. Condition of cattle good. Common rice selling as follows:—

	Srs.	
Sadar	11½ to 15	per rupee.
Kalna	11½ to 13	
Katwa	12 to 14	
Raniganj	13 to 14	

Midnapore.—Rainfall at Sadar 1·90, Contai 2·26, Tamluk 2·23, Ghatal 4·18. Weather seasonable. Prospects of crops excellent. *Aus dhan* is being cut. Indigo is being sown. Cattle-disease is reported from Garhbeta and Binpur thanas. Common rice sells as follows:—

	Srs.	
Sadar	15	per rupee.
Contai	16 to 18	
Tamluk	13	
Ghatal	14 to 15	

24-Parganas.—Rainfall at Sadar 3·73. Weather cloudy with occasional rain. Prospects of standing crops favourable. Harvesting of jute and *aus* still continues. Fodder and water sufficient. No cattle disease. Common rice sells as follows—

	Srs.	c.	
Sadar	10 to 11	8	per rupee.
Barasat	9	0	
Basirhat	10	10	
Diamond Harbour	11	6	

Murshidabad.—Rainfall at Sadar 4·69, Kandi 3·54, Jangipur 5·03. Weather seasonable. The recent rain has done much good to *aman* crop. Harvesting of *bhadoi* still going on. Jute, mulberry, and sugarcane doing well. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	11¼	per rupee.
Kandi	12	
Jangipur	10½	

Khulna.—Rainfall at Sadar 3·52, Bagirhat 4·42, Satkhira 2·57. Weather rainy and cloudy. *Aus* being harvested; outturn about 8 annas. More rain wanted in southern part of the district for transplantation of *aman* paddy. Prices of common rice:—

	Srs.	c.	
Khulna	8 to 9	0	per rupee.
Satkhira	10	8	
Bagirhat	9	8	

High price of rice greatly felt in parts of district.

Dinajpur.—Average rainfall 8·91. Weather very hot. The rainfall of the week has done much good to *aman*, which is still being transplanted. No report of cattle-disease. Common rice selling from 10 to 12 seers per rupee.

Rangpur.—Average rainfall 11·43. Transplantation of *aman* and washing of jute still continue. No more rain wanted. Prospects fair. Fodder and water sufficient. Common rice selling from 7 to 12 seers per rupee.

Pabna.—Weather hot and cloudy. The rainfall of the week has benefited the standing crops. Common rice sells at 8 seers per rupee on an average. Fodder sufficient.

Dacca.—Rainfall 4·64. Weather seasonable. The recent rain has done some good to *aman* crop. Fodder available. No cattle-disease. Price of common rice varies from 7 seers per rupee at Munshiganj to 9 seers at Sadar.

Chittagong.—Weather hot and occasionally cloudy. Harvesting of *aus* completed; average outturn estimated at 14 annas. Prospects of *aman* improved, but more rain is wanted. Water and fodder sufficient. Rice sells at 10 seers per rupee.

Patna.—Rainfall at Sadar 3·32, Barh 4·25, Bihar 5·45, Dinapore 2·04. Prospects of rice crop much improved. *Bhadoi* harvested. Fodder and water for cattle sufficient. Common rice sells at 12 seers per rupee. Prices tending to fall. Parts of Bihar subdivision flooded by hill-streams; water receding.

Gaya.—Prospects of *aghani* crop fair, though some damage caused in Nawada subdivision by flood. Harvesting of *bhadoi* completed. Fodder and water ample. Common rice selling at 12 seers, against average of 14 seers per rupee.

Champaran.—Rainfall at Sadar 0·88, Bettiah 2·57. Rain still urgently wanted for *aghani*. *Bhadoi* being harvested in places. Fodder and water sufficient. Price of common rice at Sadar 12½ seers, against average of 15½ seers per rupee.

Darbhanga.—Rainfall at Sadar 5·88, Madhubani 3·66, Samastipur 2·82. Rainfall of the week has done immense good to paddy, and has given moisture for preparing lands for *rabi*. Harvesting of *makai* completed; that of *marua* in progress.

Bhagalpur.—Rainfall at Sadar 7·68. Weather rainy for some days; sky quite clear now; temperature mild. Heavy rain all over the district. Prospects of crops improved. Cow-pox in thana Sultanganj. Average price of coarse rice in Sadar 12 seers 10 chitaks per rupee. Fodder and water sufficient.

Purnea.—Rainfall 10·69. Immense good done to crops by recent rain. Transplantation of *aghani* rice still going on in places. Jute-steeping in progress. Fodder and water sufficient. Common rice sells at 11 seers per rupee.

Cuttack.—Rainfall 4·22. Weather seasonable. *Beali* rice being reaped. *Sarad* being transplanted and weeded. Condition of cattle generally good. Fodder sufficient. Common rice sells as follows:—

				Srs.	c.	
Cuttack	...	...	...	15	12	per rupee.
Jajpur	...	...	...	21	0	
Kendrapara	...	...	...	18	6	
Banki	...	...	...	22	13	

Hazaribagh.—Rainfall at Sadar 3·46, Giridi 9·21. Prospects of crops very good. Rice sells from 9 to 12 seers per rupee.

General Summary.—Abundant rain has fallen over the greater part of the Province during the week. It has greatly improved the prospects of winter rice, the transplantation of which is now being rapidly completed. Swollen hill-streams have done some damage in the south of Gaya and Patna districts. In Champaran more rain is still urgently wanted. Early rice and jute are still being reaped. The harvesting of *bhadoi* crops in Bihar is almost finished. Sugarcane is doing well. No cattle-disease is reported except from two thanas in Midnapore and one thana in Bhagalpur. The price of common rice continues generally high, and is said to be still rising in some districts.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT, M. FINUCANE,

The 22nd September, 1896. *Offg. Secy. to the Govt. of Bengal.*

The following Statement shows the Quantities of the Principal Staples of Traffic imported into Calcutta from the Interior by Rail, Road, River (Country-boat and Steamer), and Canal during the month of May, 1896.

The total fall from 1st January to 19th September 1896		51·77
The average fall of the corresponding period for 24 years, Surveyor-General's Office		55·56

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; t, thunder; ≺ lightning; p, passing temporary showers; ⌓, dew.

RESOLUTION ON THE ANNUAL GENERAL ADMINISTRATION REPORT OF THE BURDWAN DIVISION FOR THE YEAR 1895-96.

GENERAL DEPARTMENT.—MISCELLANEOUS.

Darjeeling, the 28th September 1896.

RESOLUTION—No. 3127.

READ—

The Annual General Administration Report of the Burdwan Division for the year 1895-96.

The Commissioner reports that most of the district reports were received late, and his own report to Government was in consequence delayed. The Lieutenant-Governor hopes that more punctuality will be shown by the officers concerned in future.

This Division was for the greater part of the year in the charge of Mr. J. A. Bourdillon. He took charge on the 9th April 1895 from Mr. R. C. Dutt, C.I.E., was on leave for about a month, when Mr. H. C. Williams officiated, and made over charge to Mr. C. E. Buckland, C.I.E., on 17th March 1896. Mr. Buckland, who submits the report, was thus under the disadvantage of having served in the Division only for the last 15 days of the year under report. In all the districts except Birbhum and Howrah there were several changes of District Officers.

2. *Tours and Inspections.*—The Commissioner was on tour in all the districts of the Division, and inspected the offices at all head-quarters stations except Burdwan, and all the subdivisional offices, except those at Vishnupur and Jahanabad. He also visited six municipalities besides those at the head-quarters of districts and subdivisions.

All the District and Subdivisional Officers spent the prescribed number of days in camp, and the only offices of which they did not make the full number of inspections required by the orders of Government were the Hooghly Collectorate, the Burdwan treasury, and the Vishnupur subdivisional office. Each of these was inspected only once. The Government and Wards' estates under direct management of Government in this Division are large and particularly important, but it is not stated whether they were inspected, as they ought to have been under Government orders.

3. *Weather and Crops.*—The Commissioner sums up the conditions of the year in this respect as one of short rainfall and poor crops. The monsoon broke somewhat late and ceased early. The rainfall was short and unevenly distributed in every district, and the divisional mean was more than 17 inches below that of 1894-95, with the result that the harvests were generally scanty and the usually abundant supply of drinking water deficient in some parts of the division. Sugarcane is the only crop that appears to have done well generally. The Contai subdivision, which in ordinary years is partially waterlogged, is said to have benefited by the scanty rainfall, while the Ghatal subdivision suffered most from it. In spite of a poor harvest, it is reported that the material condition of the people was good. The prices of food-grains ruled fairly low, being probably influenced by reserves from the good crop of the previous year; and there was plenty of work available for the labouring classes both in the factories about Calcutta and in the railways now under construction. Mr. Buckland is probably right in thinking that the unfavourable agricultural outturn of the year affected most severely the lower middle classes with small fixed incomes

4. *Public Health and Sanitation.*—The year 1895 was an unhealthy one, and the ratio of reported deaths per mille of population was 31·7. The number of deaths from cholera was, however, less by about one-seventh than in the year 1894, and it is satisfactory to note that the health of the important towns of Burdwan, Bankura, Midnapore, and Hooghly showed a decided improvement. The recorded death-rate in Bankura town was as low as 23·3 per mille. Much inconvenience and sickness were caused by the scarcity of drinking water towards the close of the year. Steps were taken by District Boards and Municipalities to improve the water-supply, and it is hoped that more extended and systematic efforts in this direction will be put forth in the near future; but, as the Commissioner remarks, no great amelioration in this direction can be expected until the people understand the elementary principles of sanitation, and themselves realize the benefit of enforcing them. The orders issued by Government with a view to check the practice of throwing dead bodies into rivers will, it is hoped, effect some good. The Howrah water-works were completed and opened by His Honour the Lieutenant-Governor during the year, and other municipalities spent small sums on petty sanitary works.

5. *Emigration and Immigration.*—The number of emigrants registered for the tea districts was about two and half times as great as in the previous year, and it is believed that the emigration of "free" coolies has increased in the same proportion More than 12,350 coolies of all classes are believed to have passed through the Raniganj and Asansol depôts. An Assistant Surgeon has been appointed to those places as Assistant Superintendent of Emigration, who will supervise the treatment in transit of these large numbers: it is hoped that this appointment will do much good. But the Lieutenant-Governor is disposed to agree with the view taken by the recent Labour Commission that a much closer control over so-called free emigration is urgently called for.

In Bankura recruitment by garden-sardars is said to be gradually superseding recruitment by *arkatis*, who are looked upon with the greatest fear and suspicion; both in Bankura and Burdwan a considerable number of cases were instituted against person of this class.

The mines and factories in the Division attract large numbers of labourers from the North-Western Provinces and elsewhere. Generally they return home after short periods; but those who work in the mines about Raniganj gradually settle down there.

6. *Manufactures, Mines, Trades and Commerce.*—The chief articles of manufacture are silk and *tasar*, jute, cotton, molasses, lac, rope, brass and hardware, indigo, paper, pottery and iron. The silk and hardware industries are steadily declining; and the same remarks is made with regard to the weaving of cotton cloth, but the figures given do not show the outturn of indigenous

looms separately from that of the mills. Messrs. Burn and Company's potteries at Raniganj show an outturn more than doubled; and the other principal industries seem to be steadily progressing, though comparative statistics are not available for all of them.

The quantity of coal raised was large, and prices are said to have fallen. The output in the calendar year 1895 was 1,582,499 tons.

A comprehensive statement of the principal imports and exports by rail, river and canal is given for the first time in accordance with recent orders of Government. District Officers have been unable to review these figures in detail, presumably because they were received too late. The imports amounted to 132½ lakhs of maunds, and the exports to nearly 321 lakhs. It is only in respect of the trade between Calcutta and the districts of Burdwan, Birbhum, Midnapore and Hooghly that the statistics can be compared with those of previous years; and in them there was a considerable falling off both in imports and exports. The total exports of rice and paddy exceeded the imports by nearly 49 lakhs of maunds, in spite of the poor harvest. On the other hand, there was a net surplus import of pulses, wheat, and other food-grains exceeding 6 lakhs of maunds; but even taking this into account, it is a striking fact that the Burdwan Division should be able to spare for export so very large a quantity of foodstuffs as 43 lakhs of maunds, in a year when the crops are below the normal, and that no serious rise in prices should ensue. The figures are, however, of doubtful accuracy, and should, as the Commissioner remarks, be carefully examined by District Officers in future years.

7. *Vital statistics.*—It is satisfactory to note that greater attention has been paid to the recording of birth and death statistics, and that omissions to report were promptly dealt with. The Commissioner considers, however, that the wide variations between the statistics recorded for different towns show that there is still considerable room for improvement. That this is so is clear, too, from the preponderance of deaths over births as recorded in the districts of Burdwan and Hooghly and in almost all the municipalities. It is incredible that such a preponderance exists in fact throughout any large areas, or could be brought about by any form of unhealthiness short of a devasting epidemic. His Honour trusts that the continued efforts of District Officers may in time succeed in establishing an approximately complete system of registration.

8. *Crime, Police, Criminal Justice.*—Both cognizable and non-cognizable crime showed an increase; of each description rather more than 20,000 cases were reported, but of the non-cognizable cases about 8,000 were connected with sanitary matters and do not come under the category of crime, properly so called. More than 96 per cent. of all cases reported were found to be true; 752 were declared false, and in 83 of these prosecutions were instituted under section 211 Penal Code, but convictions were obtained only in 24. In a large proportions of cases (6·10 per cent.) the police refused enquiry. Mr. Bourdillon drew the attention of Magistrates to this matter.

More than half the cases sent up by the police for trial were disposed of at the first hearing, and only 7 per cent. were remanded four times or more. In this matter Hooghly has contributed to raise the standard of the Division, and Burdwan to lower it. In Burdwan 14·6 of the cases were remanded four times or more; and it is difficult to assign any reason but dilatoriness for a state of things so different from that which prevails in the surrounding districts.

Of the cases committed to the sessions for trial 61·7 resulted in conviction.

Altogether about 25,000 cases were tried, and of these Honorary Magistrates disposed of 9,900. Over 31,000 persons were tried, and 70 per cent. of them convicted; nearly 62,000 witnesses were examined, and of this large number only 3 per cent. were detained more than two days. Fines to the amount of Rs. 1,00,800 were imposed during the year; Rs. 96,000 were collected out of the total demand, and the large sum of Rs. 17,000 had to be remitted. The aid given by Honorary Magistrates and Benches has been most useful, but the Lieutenant-Governor regrets to notice that their attendance in some places was irregular. The average number of cases disposed of by each Magistrate was larger, and the percentage of their decisions confirmed on appeal was somewhat less, while the percentage of witnesses detained for more than two days was slightly larger than in the previous year, and so far there has been retrogression instead of improvement, but on the whole the administration of criminal justice appears to have been fairly satisfactory.

With regard to the police, the criticisms of Magistrates are directed mainly to the evil effects of frequent transfers upon the discipline and local knowledge and influence of the force; and there can be no doubt, as remarked by the Magistrate of Birbhum, that too frequent changes of officers both in the higher and lower grades must seriously impair its efficiency. The Lieutenant-Governor notices with regret the unfavourable comments made by District Officers on the new class of Sub-Inspectors, who, it is said, do not mix freely with the people, and report a number of cases as true which they should send up for trial but do not send up. One of the objects of the late reorganization of the police was to improve the *personnel* of the force, and the Lieutenant-Governor hopes with the Commissioner that under proper advice and guidance, the new Sub-Inspectors will be found capable, in time, of being turned to good account. Satisfactory progress was made in the resumption of chaukidari chakran lands, and the introduction of Act VI of 1870 in all the districts but Burdwan. The number of chakran chaukidars was reduced by more than one-tenth during the year, but there are still nearly 20,000 of them in the Division.

9. *Land Revenue.*—There was a falling off in the collections of land revenue, road cess, zamindari dak cess and embankment cess, as compared with the previous year. Out of a total demand, current and arrear, of Rs. 1,00,56,698, a sum of Rs. 93,77,850, or 93 per cent., was collected, and Rs. 46,670 remitted, the balance being Rs. 6,28,770.

In the permanently settled estates the percentage of current land revenue collections on current demand reached the prescribed standard of 99 per cent. in Burdwan, Birbhum, and Bankura. In Midnapore and Howrah and Hooghly it was 97 and 98 per cent. respectively. So far the results in permanently settled estates are not unsatisfactory.

But in temporarily settled estates the collections were far below the standard, except in Birbhum, where, however, the revenue from this class of estates is trifling.

The percentages of collections on current demands in the temporarily settled estates in the different districts, as compared with the standard of 95 per cent., are as follows:—

Burdwan	48·4
Birbhum	100·00
Bankura	69 1
Midnapore	87·1
Hooghly }	70·6
Howrah }	

In the case of the khas mahals the realisations amounted to only 56 per cent. of the total demand in Midnapore, and this, though the subdivision of Contai, in which the principal estates managed direct by Government are situated, is said to have benefited by the scanty rainfall.

There is much room for improvement in the land revenue administration of this division as a whole; collections in estates managed by Government and in Wards' estates are far below the prescribed standards, frauds have been discovered in the land revenue accounts of some districts, road cess valuations have been badly made, and the number of compulsory processes for realisation of rents and revenue, though reduced during the year under report, is still very great. The present Commissioner and District Officers are not responsible for these defects, but the rectification of them requires their unremitting attention.

10. *Wards' Estates.*—There were 8 estates in the division under the Court of Wards, against 9 in the previous year. The percentage of total collections on total demands (*i.e.*, current and arrear) in the Burdwan Raj estates, including the Sujamutha estate, amounted to nearly 65 per cent., whilst the collections in the estates in the district of Midnapore varied from only 5 to 68 per cent. and those in the two estates in Bankura and Howrah were 59 and 50 per cent. respectively. The collections in the Burdwan Raj estates amounted to nearly 96 per cent., on the total current demand—a fairly satisfactory result. The outstanding arrears in wards' estates in this Division are very heavy, and should, if irrecoverable by legal process or if beyond the ability of the raiyats to pay, be remitted, as frequently ordered by Government, as there is no object in showing them year after year in the accounts if they cannot be paid.

11. *Excise, Stamps, Income-tax.*—The total excise revenue was Rs. 13,30,000, showing an increase of nearly a lakh, the incidence being now 2 annas 9 pies per head of population. The revenue from country spirit was highest in Burdwan, but illicit distilation appears still to be common both in that district and in Midnapore. A revenue of Rs. 19,18,000 was derived from stamps, being Rs. 31,000 less than in 1894-95. The income-tax yielded Rs. 2,32,000, the percentage of collection on the final demand being as high as 99·5.

12. *Communications.*—Two new branch lines—the Toposi branch of the East Indian Railway and the Bengal Provincial Railway from Mugra to Tarkeswar—have been opened during the year. Other new lines have been projected, and lands are being acquired for the Sini-Midnapore-Cuttack Railway. No new roads have been made, but some existing roads have been metalled, and some have been bridged.

13. *Education.*—There were 11,000 schools with 303,000 pupils at the close of the year, being 250 schools and 7,800 pupils less than at the close of the preceding year. Of the total number of boys of a school-going age, 53·4 per cent. were at school; last year the percentage was 54·1: 18,500 girls went to school. The total expenditure rose, in spite of the decrease of pupils, by Rs. 5,000 to 11¾ lakhs. It is satisfactory that the municipalities have been able generally to give increased grants towards primary education; but the District Boards of Burdwan and Bankura have curtailed their grants for some reason unassigned.

Twenty-nine thousand of the pupils at school were Muhammadans; most of these, the Commissioner remarks, were receiving primary education. The District Board of Hooghly has transferred two of its model schools to purely Muhammadan centres.

The Lieutenant-Governor is pleased to notice the good reports of the college kept up by the Burdwan Raj, and of the Raja of Maisadal's technical school.

14. *Dispensaries and Hospitals.*—The institutions kept up by the Burdwan Raj are again distinguished, and the success of the municipal dispensary at Burdwan has rewarded the interest taken in it by the Municipal Commissioners and Civil Surgeon. Other successful dispensaries are maintained by zamindars at Hetampur, Chuckdighi, Ayodhya, Kirnahar, Amragoria, Shampur, Nayabasan, and elsewhere. It is to be regretted that the District Board's dispensaries in Hooghly are not more popular.

15. *Local Self-Government Institutions.*—The work of District Boards is well spoken of their Chairman, but not so that of the Local Boards, whose responsibilities are thought to exceed their power. Mr. Bright, Magistrate of Midnapore, reports unfavourably of their management of pounds and of the village road grants (as do other Magistrates), and says that he was able during the recent water-scarcity to derive no help from their advice.

The same officer has, however, been struck which the interest shown by the leading members of the new Union Committees in his district, of which there are six. Six have also been formed in Burdwan, four in Hooghly, and four in Howrah; except in Burdwan, they began work during the year, and some have already excavated tanks.

The Howrah Municipality has incurred a debt of fifteen lakhs of rupees for its new water-works. It is hoped that the Commissioners will be able to secure the regular repayment of the loan. A special auditor had to be appointed by Government to adjust the accounts of the Burdwan Municipality, which were in great disorder. The smaller municipalities have been managed with fair success, but the Magistrates of Midnapore and Hooghly deplore the factious spirit which prevails in some of them.

16. *Landlord and Tenant.*—The relations between landlords and tenants were, with a few exceptions, satisfactory; and the liberality and good management of Raja Jyoti Prosad Garga, of Maisadal, are specially noticed.

17. The Lieutenant-Governor desires to thank Mr. Bourdillon for his careful administration of the Division and Mr. Buckland for his clear and interesting report, from which extracts are published for general information.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,

Offg. Secretary to the Government of Bengal.

Extracts from the Annual General Administration Report of the Burdwan Division for the year 1895-96.

Midnapore ...	577	294	1,534	13,071	12,330	14,557	66,515	73,061	73,960	25·2	27·76	28·0
Hooghly ...	9	63	400	6,999	5,922	5,304	33,588	37,539	40,005	31·8	36·6	37·7
Howrah ...	8	54	482	4,626	8,263	9,075	18,488	20,991	25,379	24·21	27·49	33·24
Total ...	899	519	3,069	45,462	48,082	49,767	198,902	241,463	244,565	25·73	31	31·7

31. The year under review was more unhealthy than the preceding two years. The districts of this Division are more or less subject to malaria, and fever as usual claimed the largest number of victims. With the exception of Bankura and Midnapore, the death-rate exceeded 30 per mille in all the districts. It may, however, be noted that while the mortality in the rural area has increased, that in the urban tract has generally decreased. The health of some of the important municipal towns named in the margin show a decided improvement in this respect, while the contrary is the case with Howrah and a few other towns.

Towns.	Death rate per mille. 1894-95.	1895-96.
Burdwan ...	45·8	42·4
Bankura ...	34·4	29·3
Midnapore ...	42·9	35·4
Hooghly ...	47·8	41·3

32. In Burdwan the general health of the district was as bad as in 1894, the mortality in some of the thanas, viz., Raina, Khandaghosh, Kalna and Jamalpur being very heavy. The number of deaths from cholera shows a slight increase; the mortality from small-pox, which prevailed more largely during the period under review than in any of the previous four years, increased considerably. The largest number of deaths was, as usual, due to fever, the district being notoriously malarious. Mr. Windsor, the late Magistrate, observes:—

"The effects of fever can be seen even by a layman when passing through the district. I was struck by the aspect of the children in some villages in Purbusthali and Satgachia thanas. They looked as though they had been born and bred in fever, as very likely they have been. If sanitary drainage can relieve the people from the burden of ill-health from which they suffer, an effort in that direction should certainly be made. Owing to the poor rainfall and the diminished supply of good drinking water, there has been a number of deaths from cholera in the last few months, and I anticipate that the year 1896-97 will be a memorable cholera year, unless there are heavy storms in April and May."

Luckily the rainfall in May was good, and the anxiety about scarcity of drinking water and the prevalence of famine soon passed away.

33 In Birbhum the public health was comparatively better than in the preceding year, but it was by no means absolutely good.

34. In Bankura there was also some improvement in the health of the people, and there was a decrease in the number of deaths from fever, cholera and other complaints. Cholera, however, was prevalent almost all over the Vishnupur subdivision, and special measures were adopted by the District Board under the guidance of the Magistrate. Scarcity of good drinking water is believed to have been one of the causes of the outbreak of this disease.

35. In Midnapore the year was more unhealthy than the previous two years. Malarial fever was as bad as it was during 1894-95, the mortality being heaviest during November and December, when more than seventeen thousand persons were carried off by the disease. As usual, some of the rural tracts suffered most heavily. Cholera prevailed almost throughout the year, the most affected localities being the rural areas of Dantun, Maisadal, Contai and Nundigram. Deaths from small-pox also show a large increase. The disease was believed to be imported from Calcutta, and prevailed with most fatal results during March and June. Steps were taken to arrest the progress of the disease by means of vaccination.

36. In Hooghly, too, the public health was worse than in the preceding year. Cholera and fever raged with unusual severity, but, with the exception of Serampore, Baidyabati and Kotrang, the mortality in the municipal areas was lower than in 1894. The prevalence of these diseases is attributed primarily to the scarcity of drinking water towards the close of the year, when a wave of cholera passed over the district from north-west to south-east. The ravages caused by this pestilence in Serampore and its neighbourhood were distressing and serious in the extreme. Every precaution was taken to lessen the death-rate. Dr. Haffkine came up from Calcutta and inoculated a large number of coolies with successful results.

37. In Howrah there was a large increase in the number of deaths, the ratio per mille having risen from 27 to 33. In the town area the ratio of deaths was 42 against 25 per mille in 1894. This increase is attributed partly to better registration and partly to the unhealthiness of the year, caused, it is believed, by the early stoppage of the rains.

38. Much inconvenience and sickness was no doubt caused by the scarcity of drinking water, which was experienced in all the districts of the Division towards the close of the year, and yet not only was nothing done by the people themselves to improve the water-supply, but they did all they could to render what little water still remained unfit for human consumption. The description given by the Magistrate of Birbhum of the tanks in that district is so true that it may be quoted as applicable to those in other parts of the Division. Mr. Drake-Brockman writes:—

"Most villages are provided with sufficient tanks, but their state is deplorable, due to neglect and to the habits of the people, who use the banks and even the water for the calls of nature. It is impossible to walk along the banks of any tank in this district without being offended by sight and smell."

39. Steps were taken to some extent by District Boards and Municipalities to improve the water-supply, but such efforts, considering the limited means at the disposal of these bodies, can at best but afford partial relief, and no real amelioration in this direction can be expected until the people understand the elementary principles of sanitation, and realize the benefit of enforcing them in their own households.

The practice of throwing dead bodies into rivers has been another source of nuisance, but Government has already issued orders in their Resolution No. 546, dated 28th January 1896, with a view to stop the evil.

Sanitary works.

40. The Municipality of Bardwan spent Rs. 2,454 in constructing drains, filling up filthy tanks, and reducing the height of a road. The Raniganj Municipality spent nearly four thousand rupees in the improvement of drainage and the re-excavation of tanks. Small sums were spent in Kalna for the purpose of making a sanitary survey of the town, and preparing a plan and estimate of a connected system of drainage. In Katwa the preliminary survey and levelling of the town were carried out at a cost of Rs. 1,050. In the small Municipality of

Dainhat a tank was re-excavated at a cost of Rs. 1,000, and the drainage scheme of the town was completed.

41. The Suri Municipality in Birbhum carried out the suggestions made by the Magistrate and the Deputy Sanitary Commissioner for the sanitary improvement of that town. The survey and levelling of the existing drains still remain incomplete, and an attempt to carry out preliminary work resulted in failure. Mr. Drake-Brockman notices the want of any sanitation in the rural area, where it is a general practice on the part of the villagers to store their manure and other rubbish close to their houses and by the sides of dirty hollows, the water of which is used for all purposes by the owners.

42. Bankura is naturally well off in respect of drainage. The District Board have therefore decided not to initiate any measures under the Sanitary Drainage Bill at present. The District Board spent Rs. 896 in sanitary improvements, but, in the absence of any funds or inspecting agency, no systematic attempt was made during the year to improve sanitation in rural areas.

43. In Midnapore the sanitation of the town appears to have been generally good during the year, and efforts were made to improve the conservancy of the town. Attention was paid to water-supply by the reservation of tanks, &c.

44. In Hooghly the municipalities devoted a fair share of their income to sanitation, and the conservancy arrangements are good so far as they go, but there is still much room for improvement. An elaborate drainage scheme for the town of Hooghly was drawn up by the Sanitary Engineer some time ago, but the estimated cost having proved far beyond the means of the municipality, the matter was allowed to remain in abeyance. The Municipal Commissioners are more in favour of improving their water-supply than their drains. The overtures made by them to the Railway authorities for a supply of river water to selected tanks in the town by means of pipes to be connected with those which supply the Hooghly railway station have so far resulted in nothing. The Municipality of Serampore, with a view to improve the internal drainage of the town, has appointed a surveyor for the preparation of a complete and accurate map with levels of the internal drains.

As regards the rural areas, the District Board have under consideration a scheme for reclaiming and improving the dry bed of the Kausiki river in the Serampore subdivision.

45. The Municipality of Howrah devoted a fair share of its income to sanitation and conservancy.

46. The subjoined table shows the number of persons vaccinated during the year as compared with that of the preceding two years:—

Vaccination.

District.	Number of persons vaccinated.		
	1893-94.	1894-95.	1895-96.
1	2	3	4
Burdwan	32,263	40,976	32,119
Birbhum	15,107	22,892	20,820
Bankura	31,849	27,928	36,263
Midnapore	60,168	84,244	61,421
Hooghly	20,561	28,472	21,341
Howrah	18,064	24,182	20,296
Total ...	178,012	207,943	192,260

There was a decrease in the number of persons vaccinated during the year as compared with that of 1894-95, but the number is still far in advance of that vaccinated in 1893-94. The decrease is shared by all the districts

except Bankura, where the number of persons vaccinated exceeds that of the preceding two years.

47. The decrease in Burdwan is due to the greater prevalence of fever and influenza among the people and the vaccinating staff; in Hooghly this was due to a falling off in the number of children and illness of a vaccinator. The other Magistrates have not explained the decrease.

48. The people are believed to be gradually appreciating the benefits of vaccination, but there is still considerable opposition on religious grounds on the part of certain Muhammadans in Burdwan and Hooghly, and some devotees of the goddess Sitala Devi in the latter. Objections were also raised in the district of Midnapore, which is still in a backward condition.

Calf vaccination.

49. Calf vaccination was tried near Serampore, and out of 145 operations, 140 were successful. In Midnapore, of 133 calves vaccinated during the year, the operations were successful in 125 cases. From these calves 6,355 persons were vaccinated against 1,890 during the previous year; the total expenditure incurred was Rs. 67.

V.—MATERIAL CONDITION OF THE PEOPLE.

50. Though the outturn of the winter crop was poor throughout the Division, yet, thanks to the reserves of grain possessed by the people, their material condition continued to be good during the year. The prices of food-grain ruled low, and there was plenty of work available for the labouring classes. From parts of Midnapore and Bankura, which suffered most from the failure of the crops, large numbers of people are reported to have emigrated to Calcutta and elsewhere in quest of work, which they easily obtained at the factories and the railways in process of construction. In fact, in consequence of the daily increasing facilities of communication and transport, the position of the agricultural and labouring classes may be regarded as secure.

51. Those who have suffered most from the unfavourable agricultural results of the year, are as usual the lower middle classes with small fixed incomes. The difficulties they have to contend with are serious, nor is there any immediate prospect of improvement in their condition. The small plots of land on which they principally depend for support were sufficient for the purpose in bygone days, when rice sold at one maund the rupee and labour could be had for the asking; but the case is different now, as, while the standard of living rises every day and the price of labour increases, they have still appearances to keep up and traditions to maintain. Taught to despise manual labour by custom, and averse to it by habit, with little enterprise and less capital, they are compelled to swell the ranks of "Umedwars" for private and Government service, and it may be truly said of this section of the community that the amelioration in the condition of the labouring classes operates to its detriment. Unless, therefore, there is a radical change in the ideas and customs of those who compose it, the out-look, so far as this section of the population is concerned, is anything but promising.

* * * * *

VII.—PRICES OF FOOD AND LABOUR.

60. The agricultural depression during the year led to a rise in the price of rice in all the districts of the Division, except Midnapore and Howrah, where it remained stationary. The good harvests in the previous years proved beneficial in checking any abnormal rise in prices. The price of common rice ranged from 13 seers in the rupee in Hooghly to 24 seers at Contai. These fluctuations are due chiefly, as explained last year, to the sufficiency or otherwise of means of communication. In the Contai subdivision the closing of the canal shortly after the thrashing of the paddy was over led to a stoppage in the transport of paddy and the consequent fall in the price of rice.

The prices of wheat and gram underwent very slight variations. Salt was sold cheaper than in the preceding year in the districts of Burdwan and Birbhum; the price of the article was almost stationary in Hooghly and Howrah, but in Bankura and Midnapore it was much dearer than it was during the previous year.

There was no appreciable change in the labour market except in Midnapore and Howrah, where there was a slight increase in wages. The increase in the former district is explained by the construction of the railway commenced during the year. No explanation has been given of the increase in Howrah.

* * * * *

XIII.—CRIME.

99. There was an increase both in cognizable and non-cognizable crime. The number of cognizable cases reported during the year was 20,282 against 19,329, and that of non-cognizable cases was 20,526 against 17,219. Excluding sanitary cases, which have no bearing upon crime proper, the number of cognizable cases was 12,196 against 11,534.

With regard to cognizable crime, the increase was contributed by all the districts except Hooghly, which shows a decrease. The increase occurred under all classes, especially in Class V (Minor offences against property) and class VI (Other offences). The increase in Burdwan is ascribed by the Police to the bad harvest of the year, but the Magistrate believes that it was chiefly due to inefficient supervision on their part over the movements of bad characters. Better reporting of crime is said to be the cause of the increase in Birbhum and Midnapore. Failure of crops in the different parts of the district of Bankura is reported to have led to the increase in that district. The increase in Howrah is accounted for by the higher prices of food-grain consequent on the scanty rainfall. The decrease in Hooghly is due to the ordinary fluctuations in crime.

The increase in non-cognizable crime, which is shared by all the districts, occurred chiefly in cases of criminal force and of breach of municipal laws.

False cases.

100. There was an increase both in the number and percentage of cases declared to be false, but more than 96 per cent. of the cases reported were found to be true.

There was a rise in the percentage of false cases in Burdwan, Birbhum and Midnapore, and a fall in Hooghly and Howrah, while in Bankura the percentage of false cases remained stationary. The Magistrates of Burdwan and Birbhum attribute the increase to the various idiosyncracies of the Magistrates who passed the final orders. The Magistrate of Midnapore has offered no explanation of the increase in his district.

Prosecution in false cases.

101. Out of 752 cases declared false, prosecutions under section 211, P.C., were instituted in 83 or 11 per cent. of the cases, against 13·8 per cent. in the previous year. The result of prosecutions in these cases, though comparatively better than those of the previous year (convictions having been obtained in 24 cases or 28·9 per cent., against 27·8 per cent., in 1894), is still far from satisfactory. The difficulty of obtaining conviction was nearly as great, as it always has been. It is always difficult in following the procedure required by the High Court rulings on the subject to bring home to the guilty person the charge of making a false complaint. There appears to be no radical remedy possible in the existing state of the law, and with the material we have in the Police force, the improvement which is being effected in the latter will in due time produce better results in conviction under section 211 as in other respects, but the main requirement is that District Magistrates should continue to give the matter their personal attention or insist on prosecutions being instituted whenever a chance of conviction appears to be reasonably possible.

Reported cases not enquired into by the Police.

102. The Police refused enquiry, under section 157, C. P. C., in 1,345 cases, against 1,419 in 1894 and 1,597 in 1893. Except in Birbhum and Hooghly, the number of cases dealt with under this section shows a decrease, but the proportion of refusals appears to be still too high. While it is not desirable to interfere too much with the statutory discretion vested in the Police by section 157, C. P. C., to abstain from enquiries, it should always be remembered that an indiscriminate use of this section is calculated to discourage people from giving intimation of cases which they know will be shelved by the Police. My predecessor, in reviewing the returns of serious crime, took occasion to draw the attention of the Magistrates to this matter, with a view to

checking the tendency on the part of the Police to resort to this section too freely.

Compensation under section 560, C. P. C.

103. Compensation was awarded in 99 cases against 84 in 1894. The Magistrates are still found to be generally disinclined to make a free use of this section, though their attention has been frequently drawn to it as a means of checking the institution of frivolous and vexatious cases. I agree, however, in the following observations made by Mr. Drake-Brockman, Magistrate of Birbhum:—

"At the same time the section cannot be extensively used, inasmuch as it can only be applied after a case is heard by the Magistrate, and it is usually in the preliminary stages of a case that a vexatious or frivolous charge is thrown out, *e.g.*, it is either returned as false by the Police, or the petition of complaint is dismissed under section 203, C. P. C., by a Magistrate; and the case never comes to trial."

Remands.

104. Out of 5,215 A forms sent up, 2,621, or a little more than 50 per cent., were disposed of at the first hearing, and only 407 or 7 per cent. of cases had to be remanded four times and more. Hooghly, as in the previous year, attained the best results, as out of 1,636A forms 1,167 were disposed of at the first hearing. In Burdwan, where 131 out of 894 A forms had to be remanded four times or more, Mr. Windsor attributes the adjournments to the dilatoriness of the Deputy Magistrates at the Sadar station, who, he adds, are apt to remand cases on very inadequate pleas of "want of time," &c. He reports that he has constantly insisted on the prompt disposal of cases, but that with some Magistrates his remarks had no effect.

Result of Sessions trial.

105. The result of sessions trials continued to be unfavourable, the percentage of acquittals having steadily increased during the last four years. The figures are especially unfavourable to Burdwan, Birbhum and Bankura, where the percentages of acquittals were 63·7, 60 and 73 respectively. In Bankura, where the percentage was highest, the cases fell through for want of sufficient evidence. In Burdwan, the failure of 5 culpable homicide cases is attributed by the Magistrate (Mr. Windsor) to a tendency on the part of jurors to give the accused the benefit of any possible or probable shadow of doubt. There is nothing new to be said on these points.

Bad livelihood cases.

106. There was a decrease in the number of these cases. Except in Burdwan and Howrah, the result of prosecutions has been satisfactory.

Arms Act.

107. Out of 12,358 applications for the grant or renewal of licenses, 174 only were refused. The number of licenses granted under the Act rose from 11,811 to 12,608 during the year. The increase is shared by all the districts except Birbhum. As reported last year, arms are kept for self-protection or sport and also as marks of respectability. There were 96 prosecutions under the Act, of which 90 ended in conviction. The accused were all convicted and fined, except one in Burdwan, who was sentenced to one week's rigorous imprisonment, and one in Hooghly, who has absconded, for whose arrest a warrant has been issued. The fines imposed amounted to Rs. 690, portions of which have been paid away in rewards. The shops licensed under the Act were duly inspected, and the accounts of the vendors were found to be generally correct, except in one instance in Midnapore, in which the dealer was prosecuted and fined.

* * * * *

Rural police.

114. The provisions of Part II of the Village Chaukidari Act were largely introduced into the districts of this Division. No less than 2,386 villages were brought under the operation of the Act during 1895, and the number of chakaran chaukidars was reduced from 22,161 in the beginning of the year to 19,867 at its close. The work of resumption and formation of unions is going on satisfactorily in all the districts except Burdwan, where very little was done during the year. I have

urgently called the attention of the Magistrate to this matter. He has pleaded the want of establishment as an excuse for the little progress made, and it will be necessary to apply for the services of an additional kanungo. Fair progress was made in the resumption of the ghatwali lands in Bankura during the year.

115. The chaukidars under Act VI (B.C.) of 1870 are as a rule low caste men, and the attempt to improve the constitution of the rural police by appointing men of superior castes has not so far been successful, the duties of the post being regarded as degrading. In one village in Birbhum, where some Brahmins were appointed, they have objected to wearing a uniform and beating a drum on the appearance of dacoits. As a means for improving the efficiency of the rural police, the Magistrate of Bankura suggests that the chaukidars should be paid regularly, and this may well be effected if a member of each panchayat be induced to appear at the thana on a fixed day after each quarter and pay the chaukidars in the presence of the Sub-Inspector of Police. If the panchayats' accounts are occasionally inspected, and the chaukidars are questioned on parade days as to payment of wages, irregularities in the payment of wages, which has so often been complained of, are likely to be greatly reduced. Reports have been called for from district officers on this point.

* * * * * *

118. Out of 31,584 persons tried, 22,271, or a little over 70 per cent., were convicted. The percentage of convictions in cases tried by the Honorary Magistrates was 78 per cent. against 75 in 1894. Taking the figures of each subdivision separately, it will be seen that the percentage of conviction varies from 32·4 to 93·8. The worst results are returned by the Honorary Magistrates in Kalna, Vishnupur, Contai, Tamluk and Jahanabad, the percentage of convictions being less than 50 per cent., while at Burdwan, Raniganj, Ghatal, Serampore, and Howrah the percentage exceeded 70 per cent. In the case of the Stipendiary Magistrates the rates of conviction range from 54·7 to 91·3.

119. In reviewing quarterly statements of criminal business and returns of serious crime, occasion was taken to call the attention of district officers and the trying Magistrates to cases in which the proportion of acquittals appeared to be unduly large, or in which the sentences passed seemed to be inadequate. An instance of this latter nature occurred in Howrah. A woman who had deserted her husband seven months before was met by him in the street and desired to accompany him home. On her refusing to do so he knocked her down, beat her, and bit off her nose. He was tried before one of the Stipendiary Magistrates and sentenced, under section 335, I. P. C., to one month's rigorous imprisonment. The matter being brought to the notice of my predecessor by the District Magistrate, the Legal Remembrancer was asked to move the High Court for an enhancement of the punishment, which was accordingly raised to two years' rigorous imprisonment.

120. In all 61,945 witnesses were examined, of whom 2,708, or somewhat over 3 per cent., were detained over two days: the ratio per cent. of witnesses detained over two days is 4·4 in the case of the Honorary Magistrates, and 3·8 in that of the Stipendiary Magistrates, against almost a similar percentage in 1894. The ratio is very unfavourable to the Subdivisional Officers of Kalna and Rampur Hât, and to the Honorary Magistrates of the Burdwan, the Katwa, the Bankura, and the Ulubaria Benches. No reason has been assigned for the high percentage of detention in Kalna; in Rampur Hât it is due to the Subdivisional Magistrate having had a heavy file and being without a Sub-Deputy Collector for some months. The long detention of witnesses by the Bankura Bench is reported to be partly due to the non-attendance of particular Honorary Magistrates who had commenced the trials. No explanation has been offered in the remaining cases, but most probably the non-attendance of Honorary Magistrates led to the result.

121. The two Benches at Serampore were amalgamated, and the establishment of a new Bench at Amta in the district of Howrah was sanctioned during the

Benches.

122. The subjoined table shows the attendance of Honorary Magistrates in the districts of this Division during the year :—

District.	Number of times the Honorary Magistrates were asked to attend.	Number of times they actually attended.	Number of times they were absent—			Percentage of attendance to summons.	Remarks.
			With leave or notice.	Without leave or notice.	Total.		
1	2	3	4	5	6	7	8
Burdwan	2,469	1,553	290	678	916	62·9	
Birbhum	562	365	44	134	178	68·3	
Bankura	755	654	45	198	243	...	
Midnapore	2,236	1,249	134	851	988	55·8	
Hooghly	2,319	1,745	381	235	616	...	
Howrah	1,720	1,056	155	509	664	61·3	
Divisional Total for 1895	10,063	6,644	997	2,608	3,605	...	
Divisional Total for 1894	9,148	6,059	1,046	2,053	3,099	66·2	

123. With a few exceptions, the Honorary Magistrates in this Division continue to render good service. Some of them deserve commendation for their attention to their duties, and I have asked the Magistrates to communicate to them an expression of my appreciation of the help rendered by them to the Stipendiary Magistrates in the disposal of cases.

Some of the Honorary Magistrates, however, have been very irregular in attendance, notwithstanding repeated references from the Magistrates.

The system of having a permanent roster, showing the particular days on which each Honorary Magistrate has to attend, has been introduced. It is hoped that this will have the effect of improving generally the attendance of Honorary Magistrates.

Fines.

124. Fines amounting to Rs. 1,08,276 were imposed during the year, against Rs. 93,271 in 1894. The total realizable demand, including the balance outstanding at the commencement of the year, was Rs. 1,38,124, of which sum Rs. 96,003 were realized, Rs. 16,931 remitted or written off, leaving an outstanding balance of Rs. 25,190 at the close of the year. In granting remissions, careful enquiries are said to have been always made to ascertain whether the defaulters had any property, by the sale of which the fines could be recovered. In Midnapore and Hooghly a large portion of the excise fines was found to be irrecoverable, the defaulters being men of no substance. The Magistrate of Midnapore has drawn the attention of the trying Magistrates to the necessity of taking into consideration the circumstances of the accused when imposing fines, a rule which is too often disregarded in the trial of excise cases.

* * * * *

XVII.—CONDITION OF THE DIVISION AS REGARDS LAND AND LAND REVENUE ADMINISTRATION.

129. There was an important change in the system of administering the land revenue in the Division during the year, viz., that the accounts of the Zamindari Dâk cess were amalgamated with the Tauzi accounts in all the districts of the Division, and the Road and Public Works cesses in the districts of Birbhum and Bankura.

130. The total number of estates exceeded that of the previous year by 48; the increase is chiefly due to the resumption and settlement of pharidari lands. The total demand in respect of the several districts of the Division was Rs. 86,09,086, of which Rs. 82,47,986 were collected and Rs. 16,778 remitted, leaving a balance of Rs. 3,43,633. The percentage of the total collections on the total demand was practically the same as that of 1894-95, being 95·8 against 95·5. As in the previous year, the percentage of collections in Burdwan, Birbhum and Bankura was over 99. In Hooghly it rose from 96·8 to 97·3, while in Midnapore it was only 89·2. The falling off in Hooghly is nominal, being due to a sum of Rs. 19,708 having been received by transfer receipt too late to be credited within the year. The decrease in Midnapore was chiefly under class III (Estates under direct management). With regard to the estates of this class, the Collector (Mr. Bright) states as follows:—

"The percentage of collections in class III has risen from 48·3 to 51·4. Throughout the year I impressed upon the Khas Tahsil Departments the necessity of pushing on collections, and I carefully watched the progress they made. There is no doubt that we are as yet far from the prescribed minimum standard, but with an estate like Majnamutha, which bears an annual demand of rupees two lakhs and twenty-three thousand, and which in years of ordinary rainfall is liable to inundation, it is hopeless to attain anything like 90 per cent."

131. The number of estates and shares of estates which became liable to sale in this Division during the year for non-payment of Government dues was 2,347, of which 207 estates or 8·8 per cent. were actually sold, against 123 or 5·8 per cent. in the previous year. These figures show that the Sale Law was administered in the Division with great, if not with excessive, moderation.

Road and Public Works cesses.

132. The cess demand during the year was Rs. 11,18,608 against Rs. 10,97,705 in 1894-95, showing an increase of Rs. 20,903. The increase occurred in all the districts except Midnapore and Hooghly. The increase in Burdwan and Bankura is due to revaluations, and that in Birbhum to the valuation of rent-free tenures under section 68 of the Act. The decrease in Midnapore is the result of abatements sanctioned. Regarding Hooghly, the Collector says that the figures given in the previous year's report were wrong, and that the actual demand was found to be Rs. 2,24,324 on the correction of the mistakes and the disposal of objections, as anticipated in paragraph 129 of the previous year's report.

* * * * *

Public Demands Recovery Act.

137. During the year Act VII (B.C.) of 1880 was repealed by Act I (B.C.) of 1895. The new Act introduced some important changes, viz., (1) the realisation of interest after the date of the filing of the certificate, and (2) the right of redemption of the property sold under a certificate.

138. The number of certificates pending from the previous year was 12,913, the number filed during the year was 16,866 against 28,761 filed in the preceding year, showing a decrease of 11,895 or 41·3 per cent. The decrease occurred in all classes of demands and in all the districts of the Division. The falling off was principally under the head of demands under the Cess Act IX (B.C.) of 1880, the institutions being 9,612 against 17,178. This abnormal decrease is attributed partly to the amalgamation of petty rent-free holdings with their parent estates, and partly to the inability of the Road Cess office to issue requisitions owing to press of work thrown upon it by the introduction of the new Tauzi Manual. The disposals were in advance of the institutions in all the districts except Midnapore, where there was a slight decrease in the number of disposals. The result was a considerable decrease in the arrears as compared with those of the previous year, viz., 15,841 against 22,913. It is satisfactory to notice that out of 25,246 cases disposed of, recourse was had to the extreme measure of sale in 465 cases only, which is equivalent to a percentage of 1·8; in nearly 24 per cent. of cases the demands were satisfied on the mere issue of notices. The number of cases in which warrants were issued, and the amounts paid without recourse to imprisonment, rose from 111 to 575. This remarkable increase was confined to Bankura, viz., 560 against 4 in the preceding year. This was due to the issue of warrants of arrest in a large number of old cases. It is satisfactory to observe, however, that only one man was imprisoned for default of payment.

Partition.

139. As reported last year, operations under the Partition Act are practically unknown in this Division. In Burdwan two applications were received during the year, but they were rejected. Of the three cases pending in that district from the previous year, measurements in two have been completed, and in one notice under section 51 of the Partition Act has been served. The case pending in Hooghly from 1892-93 was struck off, as the parties refused to proceed with the case. It has been revived at the instance of one of them, and the proceedings will shortly be brought to a close.

Land registration.

140. The number of applications during the year was 3,669 against 3,135 in 1894-95. The increase occurred in the districts of Burdwan, Bankura and Midnapore. The increase is principally the result of more energetic steps taken by the District Officers to secure registration. Information of transfers of estates continued to be supplied by Sub-Registrars, Cess Deputy Collectors and Civil Courts, and this was of great assistance in tracing out the persons who omitted or neglected to register their names. The Collector of Midnapore suggests that a general order on all panchayats to send information of all changes of proprietorship within their respective jurisdictions is likely to prove very useful. The suggestion would have been of more practical value had the panchayats been under any legal obligation to furnish the information. The fees realised in the Division under section 64 of Act VII (B.C.) of 1876 amounted to Rs. 1,240.

141. There was no expenditure under the head of Land Registration in any of the districts of this Division, except in Burdwan, where a temporary establishment was entertained at a cost of Rs. 648 for the purpose of revising and completing Registers A, B and C.

* * * * *

Embankments.

144. No work of importance was constructed in any of the districts of this Division during the year 1895-96. In Burdwan a scheme for excavating a channel and constructing an embankment for the protection of certain villages on the right side of the river Damodar has been submitted by the Executive Engineer, Northern Drainage and Embankment Division, for the orders of Government. In Birbhum, out of the total cost of Rs. 1,777 advanced for the repair of a D schedule embankment on the river Kulia near Muhammad Bazar, the instalments recoverable during the year were realised, viz., Rs. 57 principal and Rs. 85 interest. The outstanding balance at the close of the year was Rs. 1,649. In Midnapore there are altogether 22 embankments, of which 18 are dealt with under the contract system and 4 under the Embankment Act. With regard to the former, the original contract with the proprietors for 20 years expired on the 31st March 1894, and an extension of the system for a further period of seven years was sanctioned by Government at the old jama of Rs. 55,225. Final orders as to the amount due under the new contract were not, however, published until 28th October 1895, and as a large number of notices had to be prepared and issued, which could not be completed before the end of the year, there was no current demand under the contract system during the year. Advance payments amounting to Rs. 50,546 were, however, made by proprietors during the two years following 31st March 1894. This amount represents about 46 per cent. of the total demand; there is no arrear demand under the expired contract, except Rs. 362-8-3, which are due from an estate under the Court of Wards. In Hooghly Rs. 24,867 were expended on old and Rs. 1,824 on new works. Of the demand on account of old works Rs. 12,331 were due from the Burdwan Raj estate and will be adjusted under the agreement with the proprietor of the estate. Out of the balance of Rs. 12,536, which is due from the proprietors whose lands have been benefited by the embankments, Rs. 5,949 principal and Rs. 43 interest were realised up to the end of the year. Another sum of Rs. 1,957 due from Raja Peary Mohun Mukerjee, C.S.I., will be realised by transfer from the amount held in deposit for the construction of the Kumrul sluice. With regard to the sum due on account of new works, the usual notices have been issued on the proprietors.

Drainage.

145. There are four drainage schemes in this Division, all in the district of Hooghly, viz., those of Dankuni, Howrah, Rajapur and Amta. The first three have been completed, and the last is still under the consideration of the Public Works Department.

Dankuni scheme.

146. The whole of the amount realisable on account of the original cost has been collected, except Rs. 1,735, which were realised from Maharaja Sir Jotindra Mohan Tagore, K.C.S.I., in excess of what was due from him, and which had therefore to be refunded under the orders of the civil court. Measures are being taken to realize the amount from the Receiver of the High Court under the Public Demands Recovery Act. The capitalized maintenance charges of this project were Rs. 65,344, of which Rs. 276 were remitted, leaving a balance of Rs. 65,068; of this sum Rs. 64,603 were realised up to March 1896. Out of the balance of Rs. 465, Rs. 312 will have to be ultimately remitted as due from Government.

Howrah scheme.

147. The net recoverable demand for both the original cost and capitalized maintenance charges was Rs. 5,24,924, of which Rs. 1,09,773 were collected as principal and Rs. 5,286 as interest up to March 1896, leaving a balance of Rs. 4,15,151 realisable in 13 years from 1st April 1893. The number of engagements executed up to the above period is 279, covering Rs. 3,56,452.

Rajapur scheme.

148. The survey operations in this scheme were reported to have been completed during the preceding year. During the year under review the apportionment of the original cost and maintenance charges was made and published under section 34 of the Drainage Act. The total original cost, together with simple interest up to March 1895, is reported to be Rs. 12,44,488. The original cost will therefore be 4·76 years' purchase of the annual increased value of Rs. 2,61,322 fixed by the Drainage Commissioners. The total cost including the capitalization of the maintenance charges will be a little more than 5 years' purchase.

Advances under the Land Improvements and Agriculturists Loans Act.

149. A sum of Rs. 28,000 was originally allotted to this Division by the Board in April 1895, and distributed among the districts of this Division according to their requirements. Subsequently, on the application of the District Officers, a further sum of Rs. 15,000 was allotted, viz., Rs. 10,000 to Midnapore and Rs. 3,000 to Bankura for advances under the Agriculturists Loans Act, and Rs. 2,000 to Hooghly for advances under the Land Improvements Loans Act. The total amount sanctioned during the year was therefore Rs. 43,000. Out of this large sum only Rs. 12,490 were advanced, viz., Rs. 10,750 under the Land Improvements Act and Rs. 1,740 under the Agriculturists Loans Act in Burdwan and Bankura. In Birbhum no advance was made out of the allotment of Rs. 4,000 granted to that district. The Collector explains that he personally took every opportunity to induce zamindars' agents to take loans for the improvement of tanks in their villages, but without success: wide publicity was given to the intention of Government to grant loans freely on good security, and accordingly a large number of applications poured in towards the close of the year, but most of them remained undisposed of pending inquiry into the validity of security offered.

150. In Midnapore, to which district the largest amount, viz., Rs. 18,000, was assigned, only Rs. 200 were advanced in a single case. The Collector ascribes his inability to make more advances to two reasons—(1) the inadequacy of the kanungo staff employed in making enquiries into the sufficiency of the security offered, and (2) the instructions issued by Mr. Bourdillon to the effect that these loans should be delayed until the local resources were exhausted.

151. The amount realizable during the year was Rs. 35,140 of which Rs. 22,774 were collected and Rs. 594 remitted, leaving a balance of Rs. 11,772. The balance was largest in Bankura, viz., Rs. 10,994. In Burdwan, Midnapore and Hooghly the balances at the close of the year were Rs. 596, 112 and 7 respectively. The whole of the outstanding balance is in course of realisation under the Public Demands Recovery Act.

Working of the Bengal Tenancy Act.

152. The Act appears to have worked smoothly in all the districts of this Division. The agitation prevailing among the raiyats of Midnapore about the institution of suits for commutation of rents in kind into money rents has subsided to a considerable extent. The Collector, Mr. Bright, observes that the Act has placed in the hands of the raiyats in the district powers which they, and especially those in the Contai subdivision, are beginning to recognize most fully.

153. The operations under the Act related chiefly to (1) the service of notices under sections 12 to 15 and 87, (2) to commutation of rents payable in kind into money rents under section 40, and (3) to the registration of improvements under section 80.

154. The number of applications for the commutation of rents in kind into rents in cash fell from 250 in 1894-95 to 17 in the year under report. The raiyats at first took it into their heads to file a few applications from each of several villages in the vicinity of the district head-quarters to serve as test cases, but the result was not as favourable to them as they hoped. The raiyats expected that the rates of their commuted rent would be fixed on the basis of the adjacent cash rents, but they have been to a great extent disappointed to find that the court in determining rates of money rent acted under clause 4 (*b*), section 40 by giving due weight to the average value of the rent actually received by the landlord during the 10 years preceding the year in which the application for commutation was filed. Speaking of the effect of these cases on the value of landed property in the district, Mr. Bright observes:—

"One of the effects of these rent commutation cases has been a novel and an unexpected one. In October last, when I sat to hold patni sales under Regulation VIII of 1819, I could not get adequate bids for certain patni taluks which were believed to be profitable properties. I inquired of the persons assembled in my court on the occasion why adequate bids were not being offered, and they stated that the recent rent commutation cases which had converted rents in kind into cash rents had been so disadvantageous to the patnidars, whose jama had been fixed in the belief that they would continue to receive rents in kind, that there was no demand for patni taluks, and that no one would bid for them. This is a most unexpected outcome of section 40 of the Bengal Tenancy Act."

* * * * *

XXVI.—EDUCATION.

195. There were in all 11,016 schools with 303,330 pupils on the rolls at the close of the year against 11,268 schools and 311,133 pupils at the close of the preceding year. This decrease of 252 schools and 7,803 pupils is shared by institutions of all classes. In Burdwan and Hooghly there was a diminution in the number both of institutions and pupils. Birbhum with a slight increase in the number of its schools shows a considerable falling off in the number of pupils. In the other districts there was an increase in the number both of schools and pupils.

Financial results.

196. The total expenditure on education in this Division rose from Rs. 11,71,531 to Rs. 11,76,835. The expenditure from Provincial revenues fell from Rs. 81,691 to Rs. 78,587, and that from District Board Funds from Rs. 1,63,209 to Rs. 1,61,644. But there was an increase in the expenditure from other sources, including municipal funds.

Colleges.

197. Besides the two colleges at Hooghly and Midnapore which are maintained by Government and local bodies, there are two colleges—one at Uttarpara in the district of Hooghly, and another at Burdwan. Both these institutions are supported and managed by private individuals. No information as regards the Uttarpara College is available. The Burdwan Raj College free institution, maintained by the Burdwan Raj, now under the Court of Wards, is in a very flourishing condition. It sent up 98 candidates for the last First Arts Examination, of whom 42 were successful, 2 passing in the first, 8 in the second, and the rest

in the third division; 3 of these won scholarships. The result is very creditable to the college staff, and especially to the Principal, Babu Uma Charan Banerji. I presided at the institution on the occasion of the last prize distribution in May 1896, and was much pleased with the accounts furnished to me of the good behaviour and discipline of the boys. I made a suggestion to the young Maharaj Kumar and the Manager of the Burdwan Raj that a boarding-house attached to the college, capable of holding 200 boys, is an improvement much to be desired.

High schools.

198. There were at the close of the year 87 high schools with an attendance of 13,783, against 83 high schools with 14,005 pupils at the close of 1894-95. Burdwan and Howrah each gained one and Hooghly two schools. The number of schools in the other districts remained the same as in the previous year. There was a falling off in the number of pupils in all the districts except Birbhum, which shows an increase.

The following is a comparative table of the results of the University Entrance examinations in the districts of this Division during the last two years:—

District.	1894-95.		1895-96.	
	Number of competitors.	Number of successful students.	Number of competitors.	Number of successful students.
1	2	3	4	5
Burdwan	153	78	153	87
Birbhum	48	39	46	35
Bankura	67	34	56	41
Midnapore	120	32	111	65
Hooghly	214	114	193	113
Howrah	128	46	117	47
Total ...	730	343	675	388

The result was much better than in the preceding year, 57 per cent. of the competitors having passed against 46 per cent. One of the unaided schools known as the Town School at Midnapore is entitled to special praise, having passed all the 15 boys it sent up at the last Entrance Examination.

Middle schools.

199. There were in all 407 Middle English and Middle Vernacular schools against 410 in the preceding year. Loss of 3 schools was attended by a loss of 742 pupils. All the districts, except Howrah, shared in the decrease in the number of pupils. There was, however, an increase in expenditure from fees and other sources in schools of this class. The subjoined table shows the result of the Middle Scholarship Examination during the past two years:—

Districts.	1894-95.		1895-96.	
	Competed.	Passed.	Competed.	Passed.
1	2	3	4	5
Burdwan	372	166	361	206
Birbhum	131	80	169	73
Bankura	185	94	180	113
Midnapore	335	185	377	150
Hooghly	242	152	219	97
Howrah	109	67	110	56
Total ...	1,374	744	1,416	695

The result of the examination was unsatisfactory, the proportion of successful candidates to their total number being small.

Primary education.

200. There were 10,512 Upper and Lower Primary schools with 263,935 pupils, against 10,624 schools with 267,977 pupils in 1894-95. The districts most seriously affected are Burdwan and Hooghly; in the former, a reduction of 66 schools was attended by a loss of 2,739 pupils, and in the latter, there was a decrease of 176 schools and 4,982 pupils. There was a falling off in the number of pupils in Birbhum. All the other districts show an increase. Under this head the large decrease in Burdwan has not been explained: it may be due to the prevalence of malarial fever. That in Hooghly is ascribed to the transfer of an outpost from Hooghly to Howrah. Malarial fever and the failure of crops led to the diminution in Birbhum.

Expenditure.

201. The total expenditure on primary education fell from Rs. 6,08,563 to Rs. 5,97,876. The decrease occurred in the grants from all sources except municipal funds, under which head there was an increase in all the districts except Burdwan. The District Boards of Midnapore and Hooghly spent much larger sums in the promotion of primary education, but the District Boards of Burdwan and Bankura curtailed their grants during the year. No reason has been assigned for these variations in the expenditure.

Examinations.

202. The following table shows the result of the Upper and Lower Primary Scholarship Examinations during the last two years:—

Districts.	Upper Primary.				Lower Primary.			
	1894-95.		1895-96.		1894-95.		1895-96.	
	Number competed.	Number passed.	Number competed.	Number passed.	Number competed.	Number passed.	Number competed.	Number passed.
1	2	3	4	5	6	7	8	9
Burdwan	356	161	338	132	1,088	562	1,474	785
Birbhum	144	52	121	73	686	299	611	248
Bankura	274	134	258	98	1,770	757	1,467	855
Midnapore	484	163	557	301	3,735	1,985	3,987	1,519
Hooghly	166	85	193	76	1,381	703	1,232	466
Howrah	108	57	142	99	735	316	765	343
Total ...	1,532	652	1,609	779	9,395	4,622	9,536	4,216

It will be seen from the above figures that while the proportion of candidates who passed the Upper Primary Scholarship Examination was higher than it was during the preceding year, the result of the Lower Primary Scholarship Examination was worse, the percentage of successful candidates being 44·2 against 49·1 in the preceding year.

Female education.

203. There were altogether 18,532 girls in receipt of education in girls' schools and schools attended by boys. Excluding Hooghly, for which no figures have been furnished, the number of girls' schools was 316. Bankura and Midnapore has returned the largest number of girls receiving education. The Hitakari Sava at Uttarpara is doing its best to further the cause of female education. Leaving out of account Howrah, for which no information is available, 248 girls from the districts of this Division appeared at the Uttarpara Hitakari Sava examination, of which 205 passed, some of them obtaining scholarships. The Magistrate of Hooghly reports that the missionary societies are doing much in the way of promoting female education.

Muhammadan education.

204. There was a considerable diminution in the number of Muhammadan pupils attending schools during the year. The loss was shared by the districts of Burdwan, Birbhum and Hooghly, while the other districts show an increase. The subjoined table shows the number of Muhammadan pupils attending schools in the different districts in this Division:—

1	2		3		4		5	
District.	Population.		Total number of pupils attending schools.		Number of Muhammadan pupils attending schools.		Percentage of Muhammadan pupils to total number of pupils.	
	Total. (a)	Muhammadans. (b)	1894-95. (c)	1895-96. (d)	1894-95. (e)	1895-96. (f)	1894-95. (g)	1895-96. (h)
Burdwan ...	1,391,880	267,224	46,679	43,753	6,733	6,056	14·4	13·8
Birbhum ...	797,833	169,752	25,264	24,134	5,101	4,699	20·1	19
Bankura ...	1,069,668	45,312	38,483	38,939	1,422	1,428	3·6	3·6
Midnapore ...	2,631,516	171,412	118,349	119,682	6,397	6,600	5·4	5·5
Hooghly ...	1,034,296	189,469	49,767	44,067	7,055	6,520	14·1	14·7
Howrah ...	763,625	156,022	32,600	32,755	3,086	3,608	9 4	11·01
Total ...	7,688,818	999,191	311,133	303,330	29,794	28,821	9·7	9·5

There was a slight variation in the percentage of Muhammadan pupils to the total number of pupils attending schools in this Division. Considering that the Muhammadans form 12·9 per cent. of the entire population, the proportion of Muhammadan pupils can hardly be regarded as low; but it should be remembered that most of them are receiving primary education. Excluding Hooghly and Howrah, for which figures are not available, the number of Muhammadan pupils who were successful at the different examinations was:—

F. A.	1	against	2 in 1894-95.	
Entrance	4	„	3 „	„
Middle English and Vernacular Scholarship	17	„	9 „	„
Primary Scholarship	287	„	251 „	„

Not a single candidate appeared at the Entrance or Middle Scholarship Examinations from Bankura. The largest proportion of successful Muhammadan candidates come from Burdwan.

Education of Santhals and other aboriginal races.

205. There were, as in the previous year, 8 schools for the education of the miners' children in the Raniganj and Barakar coal tracts, attended by 177 pupils, of whom 71 were aborigines, 97 low caste Hindus and 9 Muhammadans. The pupils receive free tuition at these institutions, each guru receiving a monthly stipend of Rs. 8 from Government. Four of these gurus have advanced so far as to teach up to the standards prescribed for the Lower Primary Examination: three of these sent up 4 candidates to the Lower Primary

Scholarship, but all were unsuccessful. These patshalas are reported to be accommodated in miserable thatched huts, not suitable for the purpose, the Managers of the Coal Companies taking very little interest in the welfare of these institutions.

In Birbhum there were 13 schools for the education of Sonthals, attended by 258 pupils. All these institutions are maintained by the District Board, which contributes a monthly stipend of Rs. 5 to each. Two boys passed the Lower Primary Scholarship Examination, one of whom was awarded a scholarship. Seventeen Sonthal lads passed at the Reward Examination.

In Bankura the number of pupils of the Sonthal and other aboriginal races increased from 1,227 to 1,570. The proportion of Sonthal boys actually at schools to the total number of scholars in the district rose from 3·1 to 3·9, and their proportion to the total number of Sonthal boys of school-going age was 16·7 against 13·1 per cent. in the previous year. The results of the several examinations, so far as pupils of this race are concerned, were not so satisfactory as in the previous year, except as regards the Upper Primary Scholarship Examination, at which 4 out of 9 candidates were successful. At the Lower Primary examination, out of 45 candidates 12 only passed against 17 in the previous year. At the Reward Examination 142 competed, of whom 120 passed against 138 in 1894-95.

In Midnapore 1,882 pupils belonging to the aboriginal tribes were under instruction. None of these passed the Middle Vernacular Scholarship Examination during the year, while in 1894-95 three candidates were successful. Two passed the Upper Primary and 24 the Lower Primary Scholarship Examinations during the year. For the encouragement of primary education, one of the lower primary scholarships is awarded annually to the best among the succesful students belonging to these races.

206. The Technical School at Burdwan, which was started in 1893, was affiliated during the year to the Sibpur Engineering College. The attendance is gradually declining, and the year closed with only 13 students on the roll. The total cost of maintenance amounted to Rs. 2,052, of which Rs. 1,812 were contributed by the District Board and Rs. 240 by the Municipality. The condition of this institution is by no means hopeful, and bespeaks a want of application by the local people of the importance of the institution.

Special education.

In Midnapore the Bhimpur Sonthal Normal School, which is under the management of the American missionaries, is doing much useful work by training up teachers for the education of Sonthals and other aboriginal races. The Maisadal Raja's Technical School at Midnapore, now under the management of the District Board, improved considerably during the year. Effect has been given to the recommendations made by the Director of Public Instruction during his last visit to the school. Classes have been organized for teaching theoretical subjects, and it is under contemplation to replace the present staff of artisan-instructors by better men.

207. There were 40 private schools in Burdwan attended by 370 pupils. Some of these are Koran schools and Muktabs, teaching a little of Arabic and Persian. All of these do not conform to the departmental standard. The number of private schools was reduced from 66 to 49, the decrease being due to the fact that some of them were not returned during the year. There was, owing to the same cause, a loss in Midnapore of 21 schools and 117 pupils. The sum of Rs. 2,014 was paid in rewards by Government to the pandits of Sanskrit tols in that district, in consideration of the good results of an examination held during the year.

Indigenous education.

* * * * *

XXX.—LOCAL SELF-GOVERNMENT INSTITUTIONS.

216. Mr. J. Windsor, the late Magistrate of Burdwan, while acknowledging freely the assistance rendered to him by the District Board, and the good practical work done by the several Committees, notices that the Board have not done all that could be done for the effective administration of education. The Magistrate of Howrah, Mr. H. F. T. Maguire, who joined the district when the year under

District Boards.

report was about to close, has expressed no opinion about the working of local bodies. The other District Officers speak well of the work done by the District Board in their respective districts.

Local Boards.

217. Mr. Windsor has remarked that he cannot say much in favour of Local Boards. They have not sufficient work to interest the members, and they often fail in the work assigned to them. Collections of pound and ferry rents were fairly good except in Kalna; Katwa alone administered the village road grant with discretion, and there is room for much improvement in the work of the Local Boards generally in respect of primary education. As noticed in paragraph 209 of the last report, Burdwan is the only district in this Division in which the management of secondary education has been made over to the Local Boards. The arrangement, as might be expected, has not worked well, and the District Board has resolved to withdraw the power in question from the beginning of the current year.

The Magistrate of Bankura, Mr. N. Bonham-Carter, reports that the Local Boards proved useful so far as primary education is concerned, but their management of village roads, pounds and ferries cannot be said to have been successful.

The Magistrate of Midnapore, Mr. W. R. Bright, makes the following remarks:—

"I am afraid that Local Boards are not very useful institutions. Their management of pounds has been open to much criticism, and the state of the village roads also leads to very unfavourable comments. It is difficult to see how it could well be otherwise, for they have large jurisdictions and no establishment. I think they are as institutions a mistake. They are expected to make a good number of bricks practically without straw. Theoretically, they should be useful as assisting the District Board with local information on local needs, but I have been much struck with their complete uselessness in this line during the water scarcity, which is just past."

The Local Boards in the districts of Birbhum and Hooghly are reported by the Magistrates concerned to have worked well.

Union Committees.

218. Twenty-one Union Committees, namely six in Burdwan, six in Midnapore, four in Howrah and five in Hooghly, were started in this Division during the year as an experimental measure. They have generally been entrusted with village roads, sanitation and water-supply, and also with the duty of inspecting primary schools. Funds were not allotted to the Unions in the Burdwan district, but those in the other districts commenced work during the year. It is still premature to pronounce an opinion about the success of these institutions. Mr. Bright visited all the Unions but one, and was struck with the interest shown by the leading members. Several of these Unions have already excavated tanks and thus improved the supply of drinking water.

Municipalities.

219. Howrah is by far the most important municipality in this Division. The water-works constructed during the year have removed the principal want of the town. The calls on this municipality are many and varied, especially in matters of sanitation, and the loan of Rs. 15,00,000 contracted for water-works has thrown an additional burden for the half-yearly repayment of the instalments on account of this loan. The Municipal Commissioners appear to be alive to the responsibilities of the position.

Burdwan stands next in importance to Howrah. The accounts of this municipality were in a most unsatisfactory condition, and a special auditor was appointed by Government for their due adjustment, the Municipal Commissioners having failed to set them in proper order within the time allowed. My predecessor discovered that the municipality had spent for other purposes Rs 22,500, (corrected by Accountant-General, Bengal, to Rs. 23,000), which should have been set aside as a sinking fund for the repayment of the three loans contracted for the execution and extension of water-works. In the opinion of Mr. Windsor the executive are not strong, and some of the Municipal Commissioners are more of a hindrance than a help in deliberations. Raniganj suffered somewhat from the transfer of the Subdivisional Officers, Mr. J. E. Webster and Mr. F. E. Jackson, who

were also Chairmen of this municipality, and the work was almost at a standstill during the interregnum between the resignation of one Chairman and the appointment of his successor. Kalna, with a non-official Chairman, continued to be well managed, and Dainhat did tolerably well under the guidance of the Subdivisional Officer of Katwa as Chairman. On the other hand, the municipal administration of Katwa has been stagnating for want of energy on the part of the Municipal Commissioners, including the Chairman and the Vice-Chairman.

The Suri Municipality was on the whole well managed, some of the Municipal Commissioners taking an interest in its affairs. The affairs of Bankura are managed with success by its zealous Chairman and Vice-Chairman. Vishnupur has a capable and energetic Chairman in Babu Umesh Chandra Chaudhri, but unfortunately some of the Municipal Commissioners allow themselves to be swayed by party feeling. Sonamukhi with its official Chairman was fairly well managed. The weak points in the administration of the Midnapore Municipality are its system of farming out cart registration fees which has recently been prohibited by Government, and its system of giving out contracts. Mr. Bright is of opinion that the task of managing it must be a considerable tax on the time of the non-official Chairman and Vice-Chairman. Ghatal and Tamluk were fairly well administered, but party spirit is said to have done much to interfere with the usefulness of the other municipalities in the district of Midnapore. The late Magistrate of Hooghly, Mr. Geake, has left the following remarks:—

"Municipal affairs occupy an undue share of the district officers' time. In at least two of the eight municipalities, obstructive tactics are pursued to such a degree as to seriously interfere with efficient control."

XXXI.—EMPLOYMENT OF MUHAMMADANS.

220. There was during the year a slight increase in the number of Muhammadans employed in the several offices and courts in this Division. They received a fair share of appointments, and their claims are generally duly considered when vacancies occur.

Though they have made some progress in primary education, yet in high education they are still much behind their Hindu fellow subjects. The Magistrates of Birbhum and Bankura report that suitable Muhammadans are not always available in those districts for appointments in the superior service of Government. Mr. Geake, the late Collector of Hooghly, thus writes:—

"Few survivors remain of the old families. Such as still exist, reared in penury and ignorance, retaining only an obstinate pride begotten of reminiscences of byegone grandeur, disdain an under-paid ministerial post, and eke out a miserable existence on the scant remains of ancestral aymas. Nothing would suit them but the easy work and ample remuneration of a Sub-Registrar—a post for which from lack of education they are totally unfitted."

To remedy this defect, Mr. Geake transferred two model schools at the disposal of the District Board from places where they were not appreciated to two purely Muhammadan centres.

* * * * *

XXXVII.—GENERAL REMARKS.

248. Having taken charge of the Division towards the very end of the year, my remarks under this head must necessarily be brief and perfunctory with regard to 1895-96. As observed elsewhere, it was a year of short crops and scanty rainfall. The people suffered severely in health. Fever prevailed with unusual violence, and there were outbreaks of small-pox in many parts of the Division. In consequence of the insufficiency of the rains, difficulty was experienced in regard to the water-supply at the end of the year in many places, but the inconvenience was unnecessarily exaggerated with a view to elicit aid from the public funds, and to increase the responsibilities of Government. As is usual when the tanks run low, mortality from cholera increased in certain localities. Among the other special features of the year may be enumerated an increase in crime, a rise in the number of emigrants to the labour districts, a falling off in the attendance of schools, and a decrease in the

number of deeds registered and in the receipts from stamps. It is remarkable, however, that the excise revenue instead of being in any way affected shows a considerable advance. Good progress was made during the year in the resumption and settlement of chaukidari chakaran lands, except in the Burdwan district. The local bodies appear generally to have worked well. The question of improving the Local Boards, so as to make them more useful than they have hitherto become, may well engage the serious attention of Magistrates and District Boards; but until they have larger sums of money to spend, the Committees cannot be expected to take a lively interest in their work.

The completion of the water-works in the town of Howrah has removed a long-felt want. A scheme had nearly been sanctioned when I left Howrah in 1883, and it has not been creditable to the Administration that the matter has so long been left in abeyance. A system of water-works, in the construction of which all the riparian municipalities in Hooghly should co-operate, is under contemplation. The sooner the project is carried out the better. It is satisfactory to note that increased attention was paid to sanitation and water-supply during the year by local bodies. Village sanitation, which is at present very much neglected, remains as much a counsel of perfection without any practical results as ever. I have made enquiries and have every reason to suppose that any proposal to make further taxation for village sanitation and water-supply possible will be most unpopular and meet with strenuous opposition.

WEATHER AND CROP REPORT.

For the week ending the 28th September, 1896.

Burdwan.—Rainfall at Sadar ·02, Kalna ·04, Katwa ·32, Raniganj nil. Weather hot and fair. Harvesting of *aus* and jute still continues. Sugarcane doing well. Condition of *aman* fairly good. Fodder and water sufficient. Condition of cattle good. Common rice selling as follows:—

		Srs.	
Sadar	...	11½ to 15	per rupee.
Kalna	...	12	
Katwa	...	12 to 13½	
Raniganj	...	12½ to 14	

Midnapore.—Rainfall in Contai ·89 and Ghatal ·28. No rain in Sadar and Tamluk. Weather seasonable. Weeding of *aman* going on. *Aus* is being cut. Prospects of sugarcane, *til*, and jute good. Indigo is being sown. Cattle-disease reported from thana Garhbetta. Common rice selling as follows:—

		Srs.	
Sadar	...	15	per rupee.
Contai	...	15 to 17	
Tamluk	...	13	
Ghatal	...	14 to 15	

24-Parganas.—One inch rain at Sadar on 27th, and showers elsewhere. Weather cloudy. Prospects of standing crops favourable. Harvesting of jute and *aus* still continues. No cattle-disease. Fodder and water sufficient. Common rice sells as follows—

		Srs.	c.	
Sadar	...	10 to 13	0	per rupee.
Barasat	...	9	0	
Basirhat	...	10	10	
Diamond Harbour	...	11	6	

Murshidabad.—Rainfall at Sadar 1·21, Kandi ·33, Jangipur ·35. Weather hot. Harvesting of *bhadoi* nearly finished. Cutting of jute going on. *Aman* and sugarcane doing well. Fodder and water sufficient. Common rice sells as follows:—

		Srs.	
Sadar	...	11	per rupee.
Kandi	...	13½	
Jangipur	...	11½	

Khulna.—Rainfall at Sadar ·28, Bagirhat ·62, Satkhira 1·00. Weather cloudy. Transplantation of *aman* paddy benefited by recent rain, but more rain wanted. No cattle-disease. Fodder and water sufficient. Rice sells as follows:—

		Srs.	c.	
Khulna	...	8 to 10	0	per rupee.
Satkhira	...	9	8	
Bagirhat	...	9	8	

Dinajpur.—Average rainfall ·56. Nights cool Prospects of *aman* and jute fair. Common rice selling from 10 to 12 seers per rupee. No cattle-disease reported. Fodder and drinking-water sufficient.

Rangpur.—Average rainfall ·65. Transplantation of *aman* and washing of jute still continue. Prospects fair. Common rice selling from 7 to 12 seers per rupee. Fodder and water sufficient.

Pabna.—Rainfall ·20. Some rain during the week. Weather hot. *Aman* paddy very poor. Prospects of winter crops fair. Sugarcane good. More rain wanted. Fodder available. Rice selling at 7½ seers per rupee at Sirajganj and 9 seers at Pabna.

Dacca.—Rainfall ·05. Weather seasonable. The recent rain has done some good to standing *aman* crop. Fodder available. No cattle-disease. Price of common rice varies from 8 to 9 seers per rupee.

Chittagong.—Rainfall ·09. Weather hot. Transplantation of *aman* continues, but more rain is needed. Water and fodder sufficient. Rice sells at 10 seers per rupee.

Patna.—No rain. Transplantation of paddy finished. Prospects fair. Rain wanted but not urgently yet. Fodder and water sufficient. Prices stationary, except in Patna and Dinapore. Common rice selling as follows:—

		Srs.	c.	
Patna	...	12	4	per rupee.
Barh	...	11	8	
Dinapore	...	11	8	
Bihar	...	12	8	

Gaya.—Prospects of paddy fair. More rain urgently wanted for the crops on high lands. Common rice selling at 10 seers per rupee.

Champaran.—No rain anywhere. It is urgently wanted for the rice crop, which will, however, pull through if good rain in a fortnight. Price of common rice fallen from 12½ to 14 seers per rupee, against average of 15¼ seers owing to new grain in market. Fodder and water-supply ample.

Darbhanga.—No rain during the week. Standing crops are doing well. Rain is urgently wanted for the proper growth of paddy. Fields are being prepared for *rabi*.

Bhagalpur.—No rain. Weather seasonable. The recent rain has improved the prospects of winter rice. Harvesting of *bhadoi* nearly over. Cattle-disease in Pertabganj and rare cases in thana Madhipura. Fodder and water sufficient. Coarse rice sells as follows:—

				Srs.	c.	
Sadar	...	...	.....	12	10	per rupee.
Banka	...	...	.....	11	14	
Madhipura	...	...	.....	14	0	
Supaul	...	...	.....	17	0	

Purnea.—Rainfall ·04. Prospects of standing crops good. Jute steeping still going on in places. Lands being prepared for *rabi* sowings. Many cattle have died from exposure to recent rain. Fodder and water sufficient. Common rice sells at 11 seers per rupee.

Cuttack.—Rainfall ·96. Weather hot and occasionally cloudy. Agricultural prospects in protected tracts promising. *Beali* rice being reaped. Transplantation and weeding of *sarad* rice continue. Sowing of *rabi* commenced in places. Condition of cattle generally good. Fodder sufficient. Common rice sells as follows:—

				Srs.	c.	
Cuttack	...	...	...	15	12	per rupee.
Jajpur	...	...	...	17	1	
Kendrapara	...	...	...	18	6	
Banki	...	...	...	22	13	

Hazaribagh.—Weather hot; overcast. Prospects of crops good. Ploughing for *rabi* crops going on. All thanas report 16 annas crops. Rice sells from 10 to 12 seers per rupee.

General Summary.—Rainfall during the week was generally light. In Bihar there was no rain at all. The heavy rain of the previous week improved the winter rice crop generally, but more rain is still required in parts of the Patna Division, also in Pabna, Khulna, and Chittagong. The harvesting of early rice and other *bhadoi* crops is nearly over. Jute is still being steeped and washed. The preparation of lands for the *rabi* crops has begun in some districts. Sugarcane is generally reported to be a good crop. There is no cattle-disease except in Midnapore and Bhagalpur. In Purnea many cattle are said to have died from exposure to the recent heavy rain. There was no important change in the price of common rice, which continues very high.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT, M. FINUCANE,

The 29th September, 1896. *Offg. Secy. to the Govt. of Bengal.*

I.

The following Statement shows the Quantities of the Principal Staples of Traffic imported into Calcutta from the Interior by Rail, Road, River (Country-boat and Steamer), and Canal during the month of June, 1896.

		Inches.
The mean pressure of the seven days		29·754
The average pressure of the corresponding period for 24 years, Surveyor-General's Office		29·707
		Hours.
The total number of hours of bright sunshine		39·7
The maximum possible number of hours of sunshine		84·5
		°
The mean temperature of the seven days		83·7
The average temperature of the corresponding period for 24 years, Surveyor-General's Office		83·0
The extreme variation of temperature		15·4
The maximum temperature		92 6
		Miles.
The highest velocity of the wind in one hour		8
		%
The mean relative humidity		86
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office		86
		Inches.
The total fall of rain from 20th to 26th September 1896		0·01
The average fall of the corresponding period for 24 years, Surveyor-General's Office		2·36
The total fall from 1st January to 26th September 1896		51·78
The average fall of the corresponding period for 24 years, Surveyor-General's Office		57·98

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; t, thunder; ☂, dew.

(a) The decrease under passengers was due to pilgrims returned from Gaya *via* Digha Ghat in the corresponding period of last year.
(b) The increase in weight of goods traffic was due to brisker traffic.
(c) The apparent decrease in goods earnings was due to Rs. 16,000 having been adjusted in corresponding period of last year.
(d) Includes 4,441 ballast train miles.
(e) Includes audited figures up to week ending—Nil.
(f) Includes 1,602 ballast train miles.

RESOLUTION ON THE TRIENNIAL REPORT ON THE ADMINISTRATION OF THE REGISTRATION DEPARTMENT FOR THE YEARS 1393-94, 1894-95 AND 1895-96.

RESOLUTION No. 196P.D.

REGISTRATION.

Dated Darjeeling, the 28th September 1896.

READ—

The Triennial Report on the Administration of the Registration Department for the years 1893-94, 1894-95 and 1895-96.

Read also—

The Triennial Report on the Administration of the Registration Department for th years 1890-91, 1891-92 and 1892-93, and the Resolution of Government record thereon.

Read also—

The Statistical Returns for the years 1893-94 and 1894-95, with the remarks thereon.

During the triennial period four offic..s held charge of the Department fc various periods. The Report has been punctually submitted to Government b the present Inspector-General, Khan Bahadur Delawar Hosaen Ahmed.

2. The following table shows the total number of registrations, as wel as the receipts and expenditure, and the number of offices open during eac

year of the triennial period under report, as compared with each of the three preceding years :—

Year.	Number of Registrations.				Total receipts.	Total expenditure.	Surplus.	Number of registration offices.	Average receipts.	Average expenditure.
	Affecting immoveable property.		Other registrations.	Total.						
	Compulsory.	Optional.								
1	2	3	4	5	6	7	8	9	10	11
					Rs.	Rs.	Rs.		Rs.	Rs.
1890-91	660,413	148,755	148,148	957,316	12,40,481	6,29,359	6,11,122	332	3,662	1,896
1891-92	659,028	174,701	165,736	988,463	13,31,736	6,84,204	6,47,532	333	4,005	2,054
1892-93	73.,2.9	207,395	152,667	1,102,321	14,35,541	7,2.,771	7,08,770	346	4,149	2,109
Total ...	1,991,668	530,851	466,551	2,984,100	40,09,758	20,40,334	19,69,424	... ..	.....	.....
1893-94	771,531	227,347	170,845	1,169,723	13,98,154	7,88,142	6,02,042	365	3,803	2,158
1894-95	743,337	255,115	170,723	1,202,675	..,52,.28	8,02,03	5,5 , 17	383	3 530	2,094
1895-96	762,304	215.5 9	181,635	1,144,508	13,43,588	8,03,.46	5,3 ,,843	397	3,384	2,024
Total ...	2,327,072	681,071	508,193	3 516,936	40,84,100	24,91,918	16,92 142	... ..	.. ...	.....
Increase ...	335,974	151,220	41,642	528,836	74,342	3,51,584	... ...	51	.....	.....
Decrease	.....	.. ...	.....	.....	.....	.....	2,77,242	.....	.....	.....

It will be seen that, while the total number of registrations under each head during the three years 1893-94 to 1895-96 exceeds the corresponding total for the preceding period of three years, there has been a falling off under each head during the last year as compared with the years 1893 94 and 1894-95. The Inspector-General points out that the proportionate increase in the last triennial period is larger in the case of optional registration than in that of compulsory registration, and that this indicates an appreciation of the advantages of registration. The fall in the total number of registrations in 1895-96, as compared with 1894-95, is common to all Divisions except Chota Nagpur and Chittagong, and is ascribed, generally, to the better harvests of the year and the consequent diminution in the number of transactions for raising money. A considerable decrease occurred in instruments of sale or exchange and of mortgage of value less than Rs. 100, and deeds of the same classes of higher value also show a reduction, though only nominal in the case of sale or exchange. Perpetual leases, which are generally granted for the sake of the premium, were also fewer. The fluctuations in different classes of deeds are noticed below. The total receipts of the Department for the three years amounted to Rs 40,84,100, as compared with Rs. 40,09,758 in the three years 1890-91 to 1892-93. If each year is taken separately, however, a steady decrease is observed in the receipts, from Rs. 14,35,541 in 1892-93 to Rs. 13,43,588 in 1895-96. The orders of Government reducing the minimum *ad valorem* fee from 12 annas to 8 annas, which came into effect from July 1893, have no doubt contributed considerably to the falling off in the last three years as compared with 1892-93, part of the decrease in 1895-96 being also due to the smaller number of registrations. The total expenditure, on the other hand, has been steadily rising during the past ten years, from Rs. 5,64,274 in 1886-87 to Rs. 8,03,745 in 1895-96, owing principally to the increase in the number of offices, and the consequent increase in the total amount of remuneration drawn by the Sub-Registrars. The average expenditure per office has, however, decreased from Rs. 2,153 in 1893-94 to Rs. 2,094 in 1894-95 and Rs. 2,024 in 1895-96.

3. The Inspector General notices a continuous increase in gifts of both immoveable and moveable property in the past six years, and observes:

"The contemporaneous increase in both these classes of documents, in spite of fluctuations in all other classes, tends to show that people are now becoming desirous that distant heirs shall not deprive near or close relations of any of the owner's property. Many people have an aversion to testamentary dispositions of property, and the Muhammadans have no power to make such dispositions. Those who will not or cannot make wills have recourse to gifts of property which they make when they become old, fail in health, or expect soon to die."

Wills, however, also show a gradual increase.

4. While fluctuations, due to good and bad seasons, are observed from year to year in the number of sales and mortgages of immoveable property, registrations tend, on the whole, to advance, 8,86,822 deeds of sale and 9,59,534

deeds of mortgage having been presented in the last three years against 7,29,449 and 7,54,574, respectively, in the previous triennial period. There is evidently an increasing desire on the part of the people to have their rights properly secured, as the Inspector General remarks, and the number of deeds brought to the registration offices is likely to increase. There can, however, be little doubt that many transactions are still not registered or even reduced to writing. In the past year 2,01,644 deeds of sale of less value than Rs. 100 were registered, against 2,12,036 in 1894-95, and 1,88,280 deeds of mortgage of similar value, against 2,11,628. The decrease in sales occurred in all Divisions except Chittagong, and in mortgages in all Divisions without exception. In both cases it was most marked in the Patna Division, where it is ascribed to good harvests and to the partial suspension of land transfers in some districts while rights are being ascertained and recorded in the survey and settlement operations. Further evidence of the effect of a good season on registrations is afforded by a reduction in 1895-96 in the number of obligations for payment of money, including bonds, in most districts of the province.

5. The number of perpetual leases registered shows a steady decrease each year, from 90,959 in 1892-93 to 85,679 in 1895-96. About three-fourths of all perpetual leases are executed in the seven Bengal districts of Chittagong, Noakhali, Backergunge, Faridpur, Jessore, Khulna, and the 24-Parganas, nearly all of which are littoral districts. In 1892-93 the total number of perpetual leases, registered in these districts, was 70,316, and in 1895-96, 65,255, the decrease occurring chiefly in the Chittagong Backergunge and Faridpur districts while the number registered in the four Divisions of Rajshahi, Patna, Bhagalpur, and Orissa aggregated only 3,002. A decrease was to be expected in the Eastern districts after the very large number of leases executed in former years. Among the causes favouring the permanent settlement of lands with tenants in those districts are perhaps (*a*) the independence of the tenants and their general prosperity, which enables them to pay the premium usually demanded for perpetual leases, (*b*) the great prevalence of sub-infeudation which enhances the difficulty of management and induces proprietors to accept fixed rents, and (*c*) the existence of newly-formed and waste lands, which cultivators do not find it profitable to take up except on a permanent tenure.

6. The total number of leases other than perpetual rose from 239,921 in 1892-93 to 246,526 in 1895-96, showing an increase of only 6,605, as compared with an increase of 66,668 during the previous triennial period. The largest numbers of such leases were registered in the Jessore (27,999), Mymensingh (21,214), Backergunge (15,639), Faridpur (12,652), and Khulna (12,517) districts. There has been an increase in the number of leases of Rs. 25 in value and under, and the average value of the land covered by each lease has fallen from Rs. 46 in 1892-93 to Rs. 41 in 1895-96.

7. A further increase has taken place in the number of applications for search and copy, which has risen from 36,107 in 1892-93 to 54,432 in 1895-96, 88 per cent. having been made at Sadar offices. The practice of making searches, for the purpose of ascertaining whether or not immoveable property is encumbered, before making purchases or lending money on the security of such property, is gaining ground.

8. The following figures (which include those for perpetual leases) show the percentage of the entire number of lettings of land coming under cognizance of the Department during the past six years in which pattas were given by the landlords to their tenants :—

Year.	Registration compulsory.	Registration optional.	Total.
1890-91	22·60	11·28	22·07
1891-92	29·98	9·89	29·37
1892-93	29·18	10·03	28·58
1893-94	29·31	9·55	28·58
1894-95	27·77	7·53	26·95
1895-96	26·30	8·19	34·28

Although the percentage has increased considerably during the past year, the proportion is still very low, and this must be ascribed principally to the reluctance of zamindars to grant pattas to their raiyats, the lettings being completed by the taking of counterparts or kabuliyats from the tenant. The

highest percentages are reported from the Lohardaga (90·20), Sonthal Parganas (78·41), Gaya (69·9), Palamau (68·1), and Purnea (65·1) districts. In most of the Bihar districts the number of pattas exceeded the number of counterparts, and this the Inspector-General attributes partly to the *sar-i-peshgi* leases, equivalent to mortgages with possession, which are common in those districts and rarely have counterparts corresponding to them.

9. The total number of registrations affecting moveable property (excluding wills and written authorities to adopt) was 164,029, as compared with 168,357 in 1894-95, 168,508 in 1893-94, and 160,490 in 1892-93. The decrease occurred in sales and obligations for the payment of money.

10. The aggregate value of property transferred by registered documents during the past year was Rs. 20,18,58,282, as compared with Rs. 17,73,50,008 in 1892-93, and Rs. 14,90,40,558 in 1889-90. Of this amount, the value of immoveable property was Rs. 17,81,76,788 and the value of moveable property Rs. 2,36,81,494, as compared with Rs. 17,63,27,871 and Rs. 2,40,51,106, respectively, during the previous year. The increase in the value of immoveable property is reported to have been due to the registration of documents of unusually high value in many districts. No special cause has been assigned for the decrease in the case of moveable property.

11. The total number of transactions involving the transfer of estates or tenures fell from 1,03,259 in 1893-94 to 1,01,489 in 1894-95 and 98,454 in 1895-96. The percentage of purchasers of each class in such transactions during the past four years is shown below:—

Year.	Mahajans, traders and money-lenders	Zamindars.	Intermediate tenure-holders.	Raiyats.	Others.
1	2	3	4	5	6
1892-93 ...	10·4	15·2	30·6	25·3	18·5
1893-94 ...	10·1	15·6	31·0	24·5	18·5
1894-95 ...	9·6	15·3	32·9	23·1	18·8
1895-96 ...	8·8	14·4	31·8	23·9	20·8

The number of transactions relating to entire revenue-paying estates was 1,985, to shares in such estates 12,077, to revenue-free properties 7,660, to intermediate tenures 51,823, and to properties of other kinds 21,389. The revenue-paying estates and shares were mostly acquired by zamindars, the revenue free properties and intermediate tenures by intermediate tenure-holders and raiyats, and the other properties by the same classes and others not specified.

12. The number of raiyati-holdings transferred by deed of sale during each of the last four years, and of purchasers of the different classes, are compared in the following Table:—

Year	RAIYATI-HOLDINGS AT FIXED RATES.							RAIYATI-HOLDINGS WITH RIGHT OF OCCUPANCY.						
	Number of transactions.	Purchasers.						Number of transactions.	Purchasers.					
		Mahajans, traders or money-lenders.	Zamindars.		Raiyats.	Others.	Total.		Mahajans, traders or money-lenders.	Zamindars.		Raiyats.	Others.	Total.
			Landlords of holdings transferred.	Other landlords.						Landlords of holdings transferred.	Other landlords.			
1	2	3	4	5	6	7	8.	9	10	11	12	13	14	15
1892-93 ...	43,749	7,881	1,238	4,777	23,760	9,486	47,106	125,259	16,135	3,241	7,889	87,160	12,729	1,27,454
1893-94 ...	47,471	8,489	1,007	6,081	25,188	10,494	51,200	135,584	17,224	3,518	9,389	1,00,622	14,712	1,44,469
1894-95 ...	49,384	8,808	1,073	6,358	26,019	10,720	52,886	145,846	17,894	2,772	9,032	1,09,806	15,873	1,55,536
1895-96 ...	46,403	7,546	892	6,678	24,514	10,749	50,479	142,771	15,845	2,171	9,548	1,06,783	17,443	1,51,990

The number of transactions of both classes fell off in 1895-96, as compared ith the figures of the preceding year, but during the past ten years the increase both classes has been very marked, the numbers having nearly doubled in e case of raiyati-holdings at fixed rates, and nearly trebled in the case of iyati-holdings with a right of occupancy. It is satisfactory to note that tiyats formed 70 per cent. of the purchasers of the latter class of holdings id the majority also of the purchasers of holdings at fixed rates. The number sales of raiyati-holdings at fixed rates in 1895-96 was largest in the 24-arganas (6,557), Chittagong (5,382), Midnapore (4,561), and Bankura (3,900) istricts; sales of holdings with a right of occupancy being most frequent in the ippera (17,394) Midnapore (15,067), Mymensingh (9,641) and Dinajpur (9,485) istricts. The average price of raiyati-holdings, both at fixed rates and ith occupancy rights, was higher in 1895-96 than in the previous year. 1 1895-96 2,12,091 standard bighas of holdings at fixed rates were sold r Rs. 48,45,903, or an average of Rs. 22 per bigha, as compared with 30,722 bighas sold for Rs. 50,47,302, or an average of Rs. 14 per bigha in 394-95. Similarly, the average price of holdings with occupancy rights has sen from Rs. 16 to Rs 19 per bigha. The Inspector-General attributes this rtly to a greater demand for land due to increase of population, and partly the increased acquaintance of the raiyats with the rights secured to them der the Tenancy Act. The recognition by the Act of the transferability of cupancy holdings where it exists by custom and the greater security given settled and occupancy rights generally by the passing of the Act have, no ubt, greatly contributed to enhance the value of such holdings.

13. The number of registrations under sections 12 and 18 of the Tenancy ct has fallen in a remarkable manner during the past decade, from 79,109 1886-87 to 14,780 in 1895-96. The decrease has been explained in pre-ous Reports as due to the unpopularity of the system of levying landlords' es under these sections of the Act, and to the discontinuance of the wrong actice of registering deeds relating to fractional portions of permanent tenures holdings at fixed rates. Many transfers of occupancy holdings were also roneously registered in past years, until the Sub-Registrars became better quainted with the law.

14. The number of documents impounded by the registering officers ring the past year was 2,033, of which 1,545 were declared by the Collectors be insufficiently stamped, and 250 to be properly stamped. Excluding 64 osecutions on account of documents insufficiently stamped, the total number prosecutions instituted under the Indian Registration Act was 123, the same mber as in the preceding year, as compared with 88 in 1892-93 and 105 in 93-94. The number of persons tried in these cases was 174, of whom 65 were quitted, 99 convicted, and the remainder were pending trial at the close of the ar. The majority of the prosecutions were under the headings "false state-ent" and "false personation." From the facts of several cases which are ported by the Inspector-General it appears that the introduction of the stem of thumb impressions has been instrumental in providing evidence r conviction in cases of false personation. All District Registrars, the spector General says, are unanimous in reporting that the system is a great feguard in ensuring correct registration, and in preventing false personation; hile several zamindars are said to have become convinced of its utility, d to have expressed a desire to introduce it in their zamindari transactions. he Inspector-General also reports that although many registering officers ve not yet learnt to take correct impressions, they are gradually improving, d it is hoped that, in the course of a year or so, they will have acquired e knowledge. It is essential that they should learn without delay. The sence of the system lies in the accuracy with which the impressions are taken.

15. The Lieutenant-Governor is pleased to see that greater activity has en shown generally in the duty of inspection, the number of inspections ving risen from 1,072 in 1892-93 to 1,305 in the past year, and a steady crease being observable in inspections made by District Registrars and Special b-Registrars. In many districts the number of subordinate offices has so gely increased that, in the Inspector-General's opinion, it will shortly be cessary to relieve Special Sub-Registrars of the work of registration, and

confine their duties to inspection and such work as the hearing of appeals and applications in cases of refusal of registration. At present the duties of the Special Sub-Registrar are frequently assigned to a Deputy Collector, and this is open to objection. With a view to obviate the inconvenience felt in this respect, joint offices have been opened at the Sadar stations, in order that the Joint-Registrar may remain in charge while the Special Sub-Registrar is absent on inspection. The Lieutenant-Governor agrees as to the importance of proper inspection of rural offices, which are often situated in remote localities, where, as remarked by the Inspector-General, there is no public opinion to control the Rural Sub-Registrars. Of the 397 offices open during the year, 211 were inspected by the special Inspectors of the Department.

16. During the past year a complete Manual of Rules and Circular Orders was published, as revised by Mr. Holmwood. Rules under the Act for the maintenance of records of rights were passed, and the scale of fees to be levied on account of registration of mutations and the scale of compensation to be allowed to Sub-Registrars were determined. Two mutation offices have been established, at Hajipur in Muzaffarpur and at Bettia in Champaran, but it is premature to express an opinion on the working of the Act. The existing accommodation for the office of the Registrar of Calcutta having proved inadequate, a sum of Rs. 55,030 was sanctioned during the year for the construction of new offices in the west block of the Collectorate building. They have been completed and will be shortly occupied.

17. The following table shows the working of Act I (B.C.) of 1876 for the voluntary registration of Muhammadan marriages and divorces since its introduction:—

Years.	Number of district in which the Act was in force.	Number of offices open on the 31st March.	Number of marriages registered.	Number of divorces other than *kholas* registered.	Number of *kholas* registered.	Total number of ceremonies registered.
1	2	3	4	5	6	7
1876-77 ...	14	77	2,555	402	161	3,188
1877-78 ...	14	103	7,391	1,404	595	9,390
1878-79 ...	14	103	8,161	1,705	771	10,637
1879-80 ...	14	107	7,137	2,097	623	9,857
1880-81 ...	14	106	5,777	1,874	779	8,430
1881-82 ...	14	107	4,951	2,239	667	7,857
1882-83 ...	14	112	5,068	2,247	766	8,081
1883-84 ...	14	112	4,273	2,315	895	7,483
1884-85 ...	14	112	3,913	2,540	957	7,410
1885-86 ...	14	112	3,993	2,422	1,109	7,524
1886-87 ...	14	112	3,926	2,179	1,147	7,252
1887-88 ...	14	112	4,100	2,478	1,090	7,668
1888-89 ...	14	113	4,527	2,819	1,113	8,459
1889-90 ...	14	113	3,959	3,119	1,137	8,215
1890-91 ...	14	115	4,063	3,154	1,234	8,451
1891-92 ...	19	151	5,442	3,260	1,474	10,176
1892-93 ...	19	151	6,780	3,853	1,542	12,175
1893-94 ...	20	169	8,205	4,485	2,053	14,743
1894-95 ...	25	191	9,488	4,784	1,789	16,061
1895-96 ...	25	211	16,675	4,996	1,709	23,380

During the triennial period the Act has been extended to 6 more districts, and 60 new offices have been opened. The total number of marriages registered has more than doubled, and the number of other ceremonies has also, largely increased, as compared with the total for the previous three years 1890-91 to 1892-93.

The Inspector-General, although thinking that the extension of the Kazi's Act, XII of 1880, has not had much influence on the number of registrations.

considers that registration is gradually becoming popular. The opinions of several District Registrars have been quoted, who suggest that the registration of marriages and divorces should be made compulsory; but the Inspector-General is unable to recommend this. Opinion on this subject is clearly much divided among the Muhammadans, and any proposal for compulsory legislation is likely at present to meet with much opposition.

18. The thanks of the Lieutenant-Governor are due to Khan Bahadur Delawar Hosaen Ahmed for his efficient administration of the Department. The names of the officers favourably mentioned by the Inspector-General will be noted in the Appointment Department.

19. In future years the Inspector-General will forward an early copy of his report to the Director of Land Records, in order that the Lieutenant-Governor in reviewing it may have before him the remarks of that officer.

ORDER.—Order that a copy of this Resolution be forwarded to the Inspector-General of Registration, for information and guidance.

Ordered also that extract paragraph 13 of the Resolution and extract paragraphs 63 to 67 of the Report be forwarded to the Revenue Department, for information.

Ordered also that a copy of the Resolution, together with a copy of the Report, be submitted to the Government of India, in the Home Department, for information.

Ordered also that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

C. W. BOLTON,

Offg. Chief Secy. to the Govt. of Bengal.

RESOLUTION ON THE REPORT ON EXCISE ADMINISTRATION IN THE LOWER PROVINCES FOR 1895-96.

FINANCIAL DEPARTMENT (SEPARATE REVENUE)

Darjeeling, the 3rd October 1896.

RESOLUTION—No. 630T.—F.

READ—

The Report of the Commissioner of Excise for the year 1895-96, with the observations of the Board of Revenue.

Mr. Krishna Govinda Gupta held the appointment of Excise Commissioner throughout the year, with the exception of four months during which he was absent on leave, when his duties were discharged by the Junior Secretary to the Board of Revenue in addition to his own work. The Excise Commissioner had the direct assistance of three Deputy Collectors, one of whom was his Personal Assistant, and two were travelling Inspectors of Excise. In 18 districts, 14 of which have central distilleries, the department was in charge of Special Deputy Collectors, whose whole time was given exclusively to Excise and Income-tax work, except in Gaya, Champaran and Bhagalpur, where the order forbidding the employment of Special Deputy Collectors on judicial work was not wholly observed, on the plea of insufficiency of establishment. In 25 districts, excise work was performed by the ordinary Deputy Collectors in addition to their regular duties. Nine Sub-Deputy Collectors were in charge of the more important distilleries, and 27 kanungoes were employed as Superintendents and Deputy Superintendents of the other distilleries and depôts open during the year. In the executive branch of the subordinate establishment, two appointments were abolished, which reduced the number of employés from 203 to 201, drawing salaries ranging from Rs. 20 to Rs. 400, while five of the old excise darogas were replaced by men of a superior class. The number of clerks in the office branch remained the same (141) as in the previous year.

2. *Inspections.*—A sufficient amount of inspection was done by the Inspectors of Excise, and considering the absence of the Excise Commissioner on leave for a portion of the year, and the lengthy periods when he was unavoidably detained in Calcutta, he seems to have travelled as much as could be expected. As suggested in last year's Resolution, every district and distillery in the Province was visited at least once during the year by the Excise Commissioner himself or one of his Inspectors. With regard to Collectors, it is reported that the sadar excise offices were not inspected at all by the District Officers of Hooghly, Khulna, Dacca and Backergunge, and that in Shahabad the Collector did not visit the central distillery. No explanation is forthcoming from Backergunge and Shahabad, and the explanations furnished by the Collectors of the other defaulting districts are not sufficient. It is satisfactory to observe that in 14 out of the 18 districts in which Special Deputy Collectors are employed, the minimum number of days prescribed for inspections in the interior (150) was attained or exceeded; in two districts the deficiency was very slight; in one the Deputy Collector was kept at head-quarters for criminal work; and in the remaining district the officer's tour was cut short by a grave domestic affliction. For Deputy Collectors of the ordinary staff, who supervise excise, the minimum period of touring is fixed at 90 days; in 12 out of 23 districts, excluding Darjeeling and the Sonthal Parganas, the circumstances of which are exceptional, the prescribed amount of touring was done, and in four districts the deficiency was trifling. The largest deficiency (46 days) occurred in Pabna, where the repeated illness of the Deputy Collector is said to have interfered with his touring, but it is not stated why the officer who acted for him during two months of the cold weather was out of the station for only three days. The short tours made in the remaining districts are generally

ascribed to paucity of officers at head-quarters, and to the exigencies of judicial and other work.

3. *Revenue and charges.*—The excise revenue was, as in previous years, realized from fees on licenses for the wholesale and retail sale of distilled and fermented liquors and drugs, distillery fees, and duty on the actual quantity of country rum, country spirit prepared in the central distilleries, opium, and hemp drugs that passed into consumption. Duty on imported liquors forms part of the Imperial Customs revenue. An increase of one rupee per seer in the Government selling price of opium was the principal change made last year in the rates at which duty is levied. The duty on charas has been raised from Rs 8 to Rs. 12 a seer since the 1st April 1896. The following statement shows the gross excise revenue, the charges and the net revenue for the last five years :—

Period.	Revenue.	Charges.	Net revenue.	Percentage of charges.
1	2	3	4	5
	Rs.	Rs	Rs.	
1891-92 ..	1,11,29,818	6,67,792	1,04,62,021	6·
1892 93 ...	1,16,00,621	6,53,715	1,09,46,906	5·6
1893-94 ...	1,21,37,096	6,47,740	1,14,89,356	5·3
1894-95 ...	1,25,67,855	6,37,858	1,19,29,997	5·07
1895-96 ...	1,33,77,980	6,74,582	1,27,03,398	5·03
Difference of the past two years.	+8,10,125	+36,724	+7,73,401	— ·04

In the above table, the net revenue for the year is shown at Rs. 1,27,03,398; but if Rs. 6,420 on account of refunds and Rs. 8,221, the difference between fines collected and rewards distributed, be added to the charges, the true figure for net revenue stands at Rs. 1,26,88,757, against Rs. 1,19,14,155 in the previous year or an increase of Rs. 7,74,602. At the same time the total number of licenses sanctioned under all heads, excepting beer, tari, poppy-heads, druggists' licenses for opium, and methylated spirits, fell from 11,056 to 10,855, and the number of licenses actually settled from 10,877 to 10,792. All exciseable articles show an increase of revenue in the past year, with the exception of majum and madak, the largest increase being obtained from outstill and distillery fees and the duty on ganja. The increase of Rs. 36,724 in charges is distributed over a number of heads, the largest items of increase being Rs. 9,733 under executive or inspecting establishment, due chiefly to the employment of a special preventive force in Bankura and Hooghly, and to the deputation of Sub-Inspectors to Noagaon to supervise the manufacture of ganja, and Rs. 9,025 under travelling allowance, while the charges for district office establishment and Special Deputy Collectors decreased by Rs. 6,386.

4. *Revenue by Divisions.*—Distributed according to divisions, the gross receipts for the last five years are shown thus :—

Divisions.	1891-92.	1892-93.	1893-94.	1894-95.	1895-96.	1895-96 compared with 1894-95.

Total ...	1,11,29,813	1,16,00,621	1,21,37,096	1,25,67,855	1,33,77,980	8,10,125	.....
					Increase ...	8,10,125	

* Revised figures.

The Presidency, Burdwan and Patna Divisions together contribute more than one-half of the increase in receipts as compared with the previous year.

5. *Revenue and consumption.*—The following table illustrates the relation of the growth of consumption to the growth of revenue from the four chief articles of excise :—

	Revenue.		Percentage of difference.	Consumption.		Percentage of difference.
	1894-95.	1895-96		1894-95.	1895-96.	
1	2	3	4	5	6	7
	Rs.	Rs.		Gall.	Gall.	
Distillery liquor	25,61,538	27,3[illegible],312	6·9	456,396	490,476	7·5
Outstill shops	29,9[illegible],978	31,78,528	5·8	.....	...	
Country rum	4,32,227	4,66,296	7·9	63,285	68,014	7·5
				Md. s. ch.	Md. s. ch.	
Opium	22,13,721	23,65,128	6·8	2,037 20 0	2,159 29 6	5·10
Ganja	24,92,755	26,80,819	7·5	4,827 30 8	5,202 20 11	7·8

Under the head of distillery liquor it is satisfactory to find that the proportionate increase of revenue has risen from 4·7 to 6·9, while at the same time the proportionate growth of consumption has fallen from 9·2 to 7·5. Taken with the fact that in the Patna Division, which yields the largest revenue from country spirit, the consumption of distillery liquor has increased from 577,131 gross gallons to 618,138, while at the same time the reported consumption of outstill spirit has fallen throughout the Province from 8,550, 224 to 8,526,056 gross gallons, these statistics seem to show that the reduction of duty in Behar and the adjustment of distillery fees with reference to the actual strength of the liquor produced have enabled distillery spirits to resist the competition of outstill liquor and have lessened the trade in illicit spirits.

6. *Sources of revenue.*—Classified according to articles, the gross excise revenue of the past five years may be shown as follows:—

Articles of Excise.	Revenue.					1895-96 compared with 1894-95.	
	1[illegible]-92.	1892-93.	1893-94.	1894-95.	1895-96.	Increase.	Decrease.

Miscellaneous	7,973	10,413	10,910	12,468	14,120	1,652	.. ...
Total ...	1,11,2[illegible],613	1,16,00,621	1,21,37,096	1,25,67,955	1,33,77,9[illegible]0	8,22,[illegible]94	12,569
					Net increase ...	8,10,125	

The receipts from country spirits have continued to advance steadily, and now make up 44 3 per cent. of the total excise revenue. Hemp drugs come next with a percentage of 21·3, followed by opium and its preparations (18·1) tari (8·1), rum (3·3), pachwai (3·1) and imported liquors (1·7). Calculated on the population ascertained at the census of 1891, and allowing for natural increase at the rate of 7 per thousand per annum, the average incidence of the excise revenue was 2 annas and 11 pies per head against 2 annas 9 pies in 1894-95, while during the latter year the incidence in Bombay was 8 annas 7 pies and in Madras 6 annas 2 pies per head of the population recorded at the last census. The settlements of the licenses for the current year have again been favourable, the fees showing a net increase of Rs. 2,32,807, shared by all Divisions except Chittagong and Patna, which show decreases of Rs. 71,373 and Rs. 81,329. The decrease in the Chittagong Division is attributed to the lower rates at which opium licenses were settled in Chittagong, the fees having been unduly run up at the auction sales in 1894-95, and in the Patna Division to the non-settlement of outstills carrying heavy fees in Gaya owing to the combination of the abkars.

7. *Country spirit.*—The revenue from country spirit rose from Rs. 55,61,516 to Rs. 59,11,840, being an increase of Rs. 3,50,324, or 6·3 per cent. Of the total amount collected, Rs. 31,73,528 were contributed by outstills and Rs. 27,38,312 by distillery spirits, the latter under the three heads of license fees (Rs. 8,81,324), still head duty (Rs. 17,95,429), and distillery fees (Rs. 61,559). The income from outstills rose by Rs. 1,73,550, and that from distillery liquor by Rs. 1,,6,774. The statistics of licenses show that the number of outstills sanctioned increased from 2,095 in 1894-95 to 2,099 in the year under review, and the number settled from 2,087 to 2,091 ; while the number of shops sanctioned for distillery spirits was reduced from 1,257 to 1,203, and the number settled from 1,217 to 1,197. In the case of outstills, however, the increase is only apparent, being due to the fact that several branch shops were given separate numbers for the first time during the year; and in paragraph 55 of his Report the Excise Commissioner points out that the aggregate number of outstill shops was really reduced by 25. In the Burdwan Division all the districts show an increase of revenue aggregating Rs. 19,677, the largest increase occurring in Burdwan (Rs. 5,174). The reduction of duty in Bankura from Rs. 2-8 to Rs. 2 per gallon London-proof, and in the Jahanabad sub-division of Hooghly from Rs. 4 to Rs. 2, which was carried out with the object of preventing illicit distillation in those tracts, took effect from 1st April 1895. In Bankura, the reduction of duty did not, it is said, reach the consumers, as what the vendor gained by it was lost in the shape of enchanced license fees which he had to pay owing to increased competition, with the result that the retail price remained the same as before. The result of the reduction of duty in Jahanabad has been successful: the retail prices have been lowered, the revenue has increased, and the cheaper liquor is stated not to have been smuggled into the surrounding area, where the duty is Rs. 5 a gallon. Both here and in Bankura the employment of a special detective force resulted in a considerable increase in the number of convictions for illicit distillation and the smuggling of country liquor into outstill areas. The Presidency Division shows an increase of nearly Rs. 96,000 in the revenue, of which nearly Rs. 73,000 was contributed by Calcutta, this being due to the great influx of up-country labourers of the drinking classes, who find employment in the mills. In the Rajshahi Division, which, with Purnea and Malda, is under the outstill system, a rise of Rs. 68,110 in revenue was obtained. All the districts in the Dacca Division show an increase of revenue amounting to nearly Rs. 25,000. The amalgamation of the distilleries at Dacca and Mymensingh in 1894-95 is reported to have proved a complete success, while the equalization of the rates of duty in the two districts from 1st April 1895 has encouraged healthy competition among the distillers. In the Chittagong Division the consumption of spirits is very limited; the revenue rose during the year by Rs. 2,000, owing chiefly to better settlements. The Patna Division, which for excise purposes may be regarded as including the districts of Monghyr, Bhagalpur and Hazaribagh, in all of which the dual system of central distilleries supplemented by outstills prevails, yields the largest revenue from country spirit; the amount realized in the past year being Rs. 21,80,750 against Rs. 20,86,095 in 1894-95, showing an increase of Rs. 94,655. This increase was obtained in both the outstill and distillery areas. The revenue from outstills shows an increase of Rs. 63,165, a slight falling off in Gaya, Shahabad, and Muzaffarpur being compensated by a large increase in the remaining districts. The distillery revenue rose from Rs. 4,16,647 to Rs. 4,48,137, the increase being largest in Patna, where it is ascribed to better settlements and to larger consumption owing to the small yield of the tari trees. The Orissa Division, with central distilleries everywhere except in the wilder tracts of Cuttack, shows a small decline of revenue (Rs. 9,749), while the Chota Nagpur Division had an increase of Rs. 32,957. The Excise Commissioner observes that the liquor revenue of the province is really derived from country spirit, tari and pachwai; and reviews its progress of recent years as follows:—

"Before the abolition of outstills and the re-introduction of the distillery system in several districts of this province, in accordance with the recommendations of the Excise Commission of 1884, the highest country spirit revenue on record (52 lakhs) had been obtained in the year 1887-88. It then began to fall, but the downward course was arrested in 1891-92. Since that year it again commenced to rise, and in 1993-94 overleaped the revenue of even 1887-88. The past two years pushed it up further, and at the end of 1895-96 it stood at

59 lakhs. Tari and pachwai also made great strides during the period, and the aggregate liquor revenue of the year under report exceeded that of the past year by Rs. 4,33,451, and that of 1887-88 by Rs. 12,41,110. There was an increase under each of the heads, as compared with both the years 1894-95 and 1887-88. It will be observed that since 1887 88 the revenue from country liquor has advanced by over 7 lakhs, and that from tari by nearly 3 lakhs, while that from pachwai has more than doubled itself. As stated in the last report, there can be little doubt that the development of this revenue is mainly due to increasing population and prosperous times It may also, to a certain extent, be attributed to the repression of illicit practices."

8. *Changes in the management of Central Distilleries and Outstills.*—The distillery and outstill areas remained the same as in the previous year, but a small distillery at Pakour was abolished, and arrangements made to supply the shops in the sub-division from the distilleries at Dumka and Rajmahal. In paragraph 53 of his Report, the Excise Commissioner discusses the effect of the substitution of a distillery fee of $2\frac{1}{2}$ annas per gallon London-proof for the former fee of an anna per gallon, irrespective of strength. This change was introduced about three years ago in sixteen out of the twenty-seven districts where the distillery system is in force. In eleven districts, the old rate was maintained by reason of the high duty or the prevalence of illicit distillation and smuggling of outstill or foreign liquor. The object of the change was to equalize the incidence of the distillery fee on the outturn of liquor in the distilleries, and to remove the inducements to distil strong liquor. In the Patna Division, where very weak liquor is consumed, and where the incidence of the fee was relatively very high, the revenue from distillery fees fell from Rs. 26,157 in 1892-93 to Rs. 20,991 in the past year, though the consumption steadily rose from 82,382 gallons London proof to 125,801 gallons London-proof. In the other districts, where comparatively stronger liquor is drunk, both the revenue and consumption advanced, and the loss of revenue in the Patna Division was made up for by the gain in the other districts, the total revenue showing an increase of Rs. 2,103. The plan of fixing minimum prices for the retail sale of liquor, which involved minute interference and was never effectual, has been abolished everywhere, but the experiment of prescribing a maximum price for the retail sale of distillery liquor is being tried in Gaya. In that district a condition is inserted in the licenses of distillery retail shops, that khasia or weak liquor, which has the largest sale in the district, should be sold at not more than 7 Gorokhpuri pice ($1\frac{1}{4}$ annas) a bottle. The measure was reported by Mr. Macpherson, the late Collector, to have worked well on the ground that it reduced smuggling by equalizing the retail prices of distillery and outstill liquor, improved the distillery revenue, and placed distillery liquor within the reach of the majority of the drinking population. Mr. Savage, the present Collector, while of opinion that it was the introduction of new vendors and competition among them, rather than the system of maximum prices, that brought about a reduction of prices and increased sales, still suggests that the system sholud be retained to serve as a useful weapon in future cases of combination among vendors. Mr. Gupta, the Excise Commissioner, is also in favour of fixing a maximum; but the Board discourage it as an interference with free trade and in itself difficult to enforce. The whole question should be discussed at length by the Board in a separate report which, with Mr. Gupta's letter No. 50 of 16th May last, referred to in paragraph 251 of the Excise Commissioner's present report, should be submitted for the orders of Government. All restrictions on the capacity of vats have been absolutely withdrawn, but the capacity of stills continues to be regulated as far as possible according to the local demand for liquor and the amount of license fee paid by the vendor.

9. *Sites of shops.*—The rules regarding sites of shops, which require that no liquor shop should be opened in a bazar, on high roads, or close to places of public resort, seem to have been carefully attended to. The sites are selected in consultation with the magisterial and other local authorities, changes being made in deference to their views and the opinion of respectable residents. During the year, three outstills and four pachwai shops in Midnapore, a pachwai shop in Burdwan, two tari shops in Howrah and Darbhanga and an outstill in Tippera, were removed in deference to local opinion; in Dacca an excise shop was removed at the request of the postal authorities; and in Purnea one outstill was transferred at the instance of the manager of an indigo factory, and another on account of its proximity to a school.

10. *Country rum.*—The rum produced in the province is charged with a duty of Rs 5 per gallon London-proof, which is higher than the duty on country spirits except in the metropolitan districts. This higher rate is levied with the view of checking the competition of country rum with country spirit, the substitution of a strong for a weak liquor being calculated to encourage bad habits. The total quantity passing into consumption from the distillery at Sibpur and the new distillery opened at Sakri in Darbhanga, and by importation from Shahjehanpur in the North-Western Provinces, and Aska and Arkot in the Madras Presidency, was 91,144 gallons London-proof (68,014 gross gallons), against 83,624 gallons London-proof (63,285 gross gallons) in 1894-95, showing an increase of 7,520 gallons London-proof. Of this increase, 5,073 gallons London-proof were contributed by Sakri rum alone, which appears to be steadily gaining ground in the market, and the manufacturers of which have contracted to supply 6,000 gallons a quarter to the army. Excluding 9,103 gross gallons exported to Assam and the North-Western Provinces, the actual consumption in Bengal itself was 58,911 gross gallons. The amount consumed in Calcutta itself is taken to be 51,729 gallons at 34° O. P., or 86,646 gallons at 20° U.P., the strength at which rum is usually sold, while the quantity exported from Calcutta to the mufassal districts came to 15,215 gallons. Besides this 2,041 London-proof gallons, or 1,767 gross gallons, were imported into the Bengal mufassal direct from Shahjehanpur. The total revenue from rum rose from Rs. 4,32,227 to Rs. 4,66,296, of which only Rs. 18,498 was contributed by license fees. As, however, rum may be sold under licenses for the sale of country spirits or imported liquor, the above figure does not represent the true revenue from license fees. About the close of the year the Calcutta Wine, Spirit and Beer Association complained that the Shahjehanpur rum was being labelled as brandy, whisky and gin; and the vendors have, under the orders of the Board of Revenue, been required to show the country of manufacture conspicuously on the labels.

11. *Imported Liquor.*—The excise revenue from imported liquor is made up entirely of fees for licenses for wholesale vend, and for licences for retail sale in shops, at hotels, dâk-bungalows and railway refreshment-rooms, and on steamers. The total receipts amounted during the year to Rs. 2,87,995 against Rs. 2,81,588 in the preceding year. The number of hotel and railway refreshment-room licenses and licenses for wholesale shops increased, but licenses for retail shops fell from 455 to 450 and steamer licenses from 18 to 6. The revenue increased in 29 districts and fell in 16. Regarding the sale of cheap imported spirits, the Board write:—

"It is disappointing that in spite of the restrictions placed on the traffic in these deleterious liquors, the trade flourishes and the imports of inferior spirits from Germany continue to increase. When the license fees for the sale of imported liquors in Calcutta were raised, it was expected that higher prices would drive this class of liquor from the market. Since then a rule has been issued prohibiting licensed vendors from selling or having in their possession imported liquors unless the bottle shows the country of origin. It is therefore no longer possible to deceive the customers as to the real nature of the stuff they are buying, but the euphonious names given to the articles, the gaudy labels attached to the bottles, and, above all, the low price at which they are sold as compared with their alcoholic value, no doubt attract a large number of buyers."

12. *Tari.*—The receipts from tari, or the fermented and unfermented sap of palmyra and date trees, amounted to Rs. 10,24,031 against Rs. 9,97,852 in 1894-95. The revenue from license fees on fermented tari shows an increase of Rs. 26,913, which was chiefly contributed by Darbhanga, Patna, Howrah, the Sonthal Parganas, Hooghly and Saran. The number of licenses issued fell from 13,902 to 13,317 in the past year, the decrease being most prominent in the Patna Division, where the number fell from 10,706 to 10,072. The Board attribute this decrease to the endeavour which has for some time past been made to introduce the tree-tax system in the Division. Reference was made in last year's Resolution to the introduction of this system into certain selected districts in Bengal, and for the current year the fee for a license to sell tari has been fixed in the Patna Division, and in the districts of Monghyr, Bhagalpur, Cuttack, Puri and Hooghly, with reference to the number of trees which the licensee declares his intention of tapping, the rate being tentatively fixed at from one anna to eight annas in the case of date trees,

and six annas to twelve annas in the case of palmyra trees. In the Patna district, a further step in the direction of the Madras system has been taken, and the revenue has been divided into two parts, one representing tree tax and the other the fee for permission to sell. Experiments are in progress with a view to ascertain the average yield per tree, but the results of one year differ so widely from those of another as to cast doubts on the accuracy of the figures. For instance, the average yield of a date tree in Burdwan was reported to be 18·7 gallons in 1893-94 and 35·2 gallons in 1894-95. Differences of soil and climate, the stages of maturity of different trees, and the manner in which the experiments were conducted, probably account for most of the variations. The largest decrease in revenue (Rs. 4,537) occurred in Gaya, and is attributed to the withdrawal of the restriction as to the minimum retail price of country spirit having enabled the outstill holders to compete openly with the tari sellers. There was also a fall in revenue of Rs. 3,937 in Calcutta, owing to the difficulty of finding unobjectionable sites for some of the principal shops, which consequently remained unsettled. The number of licenses for fresh tari fell by 722, of which Tippera alone contributed 584, the decrease in this district being ascribed to the fact that certain persons who had extracted juice only for the manufacture of molasses had been led to take out licenses in the previous year under a misapprehension of the law and rules. Unfermented tari has hitherto been exempt from taxation in the Dacca Division in the interest of the trade in date-sugar, but the exemption has recently been withdrawn. The Board have at the same time been instructed to see that the provisions of section 62 of the Excise Act, relating to the possession of tari when supplied or used for the manufacture of *gur* or molasses, are liberally interpreted and effectively carried out.

13. *Pachwai.*—The number of licenses for the retail sale of pachwai, which includes both rice and millet beer, declined from 1,668 to 1,665, but the retail license fees rose from Rs. 3,61,376 to Rs. 4,11,786. There was a very large increase (4,306) in the number of home-brewing licenses for domestic consumption, the revenue under this head amounting to Rs. 27,498 against Rs. 20,960 in the previous year. This has resulted from the system of issuing family licenses to the aboriginal tribes in Darjeeling on payment of an annual fee of Rs. 2 per house, explained in last year's Resolution. On the working of this arrangement the Deputy Commissioner observes:—

"The raiyats have not only been protected from harassment at the hands of detective officers, but they have been saved the trouble of journeying for passes at each domestic occurrence from long distances in the interior, and the risk of prosecution for failure to do so. It also tends to keep them from consuming the fiery stuff sold in the form of outstill *rakshi*, which is the most satisfactory feature in the scheme. The system has not affected the licensed trade in marua to any extent, the loss being very slight."

During the year the privilege of brewing pachwai for home consumption was extended to the aboriginal tribes of Hazaribagh. The Superintendent of St. Mary's, Kurseong, was as a special case granted permission to brew beer for the use of the inmates of that seminary, on his agreeing to pay the usual duty of one anna per gallon on the quantity of beer consumed.

14. *Ganja.*—Ganja is grown under close supervision in a compact area, with Naogaon in Rajshahi as its head-quarters, and is exported thence to golas in the districts, from which it is issued on payment of duty to retail vendors. In accordance with the suggestion of the Hemp Drugs Commission, Government has sanctioned the establishment of a public gola at an approximate cost of Rs. 71,000, for the compulsory storage of the whole of the ganja produced in the Province. The following statement shows the main facts relating to ganja revenue in the last three years:—

	Licenses sanctioned.	Licenses issued.	Quantity consumed.	Revenue.
	No.	No.	Mds.	Rs.
1893-94 ...	2,736	2,715	5,116	25,85,045
1894-95 ...	2,725	2,702	4,828	24,92,755
1895-96 ...	2,696	2,696	5,202	26,80,819

For the first time after several years there was an increase in the consumption of ganja in Bengal from 4,828 maunds to 5,203 maunds. There were decreases under round and flat ganja, and an increase under *chur*—the receipts

fragments which contain the largest proportion of the narcotic. The fluctuations in the consumption of the different kinds of ganja are reported to depend on the quantities of each available in the market, the crop of one year being better suited for manufacture into one particular kind of ganja than into another. The revenue from duty rose from Rs. 13,34,269 in 1894-95 to Rs. 14,67,498 in the past year, and from license fees from Rs. 11,58,486 to Rs. 12,13,321. The figures of consumption are highest in Calcutta (483 maunds), Mymensingh (441 maunds), Dacca (266 maunds), Purnea (235 maunds), and Bhagalpur (201 maunds). The consumption in Orissa shows an increase of 58 maunds over that of 1894-95. To the net increase of 374 maunds Calcutta contributed 121, Dacca 57, and Puri 41. Lower retail prices, the breaking up of a local monopoly, and the influx of coolies to railway works, are the causes assigned. Along with the large increase of consumption in Calcutta (121 maunds), there was a decrease of 181 maunds in the quantity exported to London. It is surmised, however, that this may be more nominal than real, for, as duty is now levied on all such exports, the merchants no longer care to declare any quantity to be intended for export as distinguished from local consumption. The Cooch Behar system, referred to in last year's Resolution, has been introduced into the Tributary States of Orissa from the beginning of the current financial year. Under this system the local cultivation of ganja is prohibited and the chiefs are allowed to get Rajshahi ganja at cost-price, and issue it to the consumers after levying duty at the rates in force in the British districts. In Chota Nagpur some cases of smuggling of Sirguja ganja have been detected in Palamau, but the local officers remark that ganja is not regularly cultivated in the Tributary States, and that the stringent measures adopted in the Orissa Tributary States need not be extended to Chota Nagpur. The imports of such ganja, however, require to be carefully watched by the local officers. In order to prevent the recurrence of frauds such as occurred in 1894 at Netrokona, the Board have prescribed a supplementary register, or daily abstract of receipts and expenditure of ganja, and have directed that the balance should be initialled by the officer in charge of the warehouse every time he receives or issues ganja. An important change was introduced during the year in the method of dealing with the manufactured crop. The old practice of estimating the quantity manufactured by counting the number of bundles was abandoned, and the produce was weighed before being removed to the private storehouses of the cultivators. Although the change at first caused some alarm, it was carried out with conspicuous success, and the work was finished during March, while the rougher process of estimating had invariably lasted on into April.

15. *Production and distribution of ganja.*—The following statement illustrates the production of ganja in, and its export from, Rajshahi during the past year:—

	Mds.
Production—	
Balance of previous years	933
Crop of 1895, less amount exported in 1894-95 ...	5,338
Crop of 1896	7,008
Total to be accounted for ...	13,279
Export—	
Of crop of 1894-95	5,306
„ „ of 1896	2,105
Quantity destroyed under sanction	7
Total accounted for ...	7,418
Balance in hands of cultivators—	
Crop of 1895 and earlier years	958
Crop of 1896	4,903
	5,861

The further distribution of the drug after it leaves Rajshahi may be illustrated thus:—

	Mds.
Balance in district golas on the 1st April 1895	978
Imported from Rajshahi	7,411
Total to be accounted for ...	8,389
Consumed in Bengal	4,488
Exported to North-Western Provinces	337
„ to Nepal	283
„ to London	68
„ to Mauritius	81
„ to Sikkim	1
„ to Hill Tippera	3
„ to Garhjat States	20
„ to Assam	717
„ to Cooch Behar	79
Quantity destroyed	466
Wastage	160
Total accounted for ...	6,603
Actual quantity in stock on 1st April 1896 ...	1,786

There has been a steady decline in the exports of ganja to the North-Western Provinces, the Bengal product being displaced by cheap varieties from the Central Provinces and other places. Since the close of the year, it has been decided to allow the export of ganja to the North-Western Provinces under bond without prepayment of duty in Bengal.

16. *Bhang.*—Bhang grows wild in many parts of Bengal, and when the Excise Act is amended, power will be taken to prohibit its collection except under license. It is collected for wholesale vend, chiefly in Monghyr, Purnea and Bhagalpur, and in the last-mentioned district a certain amount of control has for some years past been exercised by the issue of licenses authorising the collection under the supervision of an excise officer. During the past year this practice was introduced in Monghyr. The question of extending the limit of lawful possession of bhang from one quarter of a seer, to a seer, as recommended by the Hemp Drugs Commission, is under the consideration of Government. The number of licenses fell from 320 in 1894-95 to 315 in the past year, but the consumption rose from 1,064 maunds to 1,071 maunds, and the revenue from Rs. 55,394 to Rs. 59,498.

17. *Opium.*—Excise opium is supplied to the licensed vendors from the district treasuries at prices varying from Rs. 17 a seer in the Patna Division to Rs. 33 in Orissa. The following statement illustrates the demand for excise opium during the last three years:—

	Licenses.	Consumption.	Revenue.
	No.	Mds.	Rs.
1893-94	3,297	1,970	21,34,867
1894-95	3,067	2,037	22,13,721
1895-96	3,127	2,159	23,65,128

The figures for licenses include permits to licensed druggists to sell opium and its preparations, and poppy-heads, for medical purposes only. The number of these increased by 89, while the number of ordinary licenses diminished by 29 as compared with the previous year. Notwithstanding the raising of the treasury price of opium by one rupee with effect from the 1st July 1895, the consumption rose by 122 maunds and the revenue by Rs. 1,51,407, both license fees and duty contributing to the increase in receipts. The largest increase in consumption occurred in Calcutta (36 maunds), and the Superintendent of Excise Revenue repeats the opinion expressed by him last year that a large quantity of duty-paid opium, supposed to be consumed in Calcutta, found its way to Burma, where the price is very high. This view is to some extent confirmed by the fact that three persons were detected in despatching 9 seers of opium to Rangoon by post. The increase of 30½ maunds in the 24-Parganas is attributed to the cheaper prices of food-grains and to purchases made for

consumption in Midnapore, where the treasury and retail prices were higher. In Midnapore the rise of 12½ maunds is ascribed to the breaking up of the town monopoly, which led to the reduction of retail prices; and in Patna, which showed a decrease of 39 seers in 1894-95, the increase of 12 maunds is supposed to be the effect of the orders requiring retail vendors to keep lists of purchasers, by which some check is exercised over illicit dealings. The competition for shops is highest in Chittagong, where the fact of the vendors not being allowed to sell more than the equivalent of the ascertained local demand has indirectly forced up the retail price to Rs. 80, an amount nearly treble the treasury price, and bearing a fair proportion to the Burma price of Rs. 100.

18. *Madak and Chandu.*—The revenue from madak, the Indian preparation of opium for smoking, fell from Rs. 89,439 to Rs. 77,342, and the number of licenses from 308 to 300. The corresponding Chinese preparation (chandu) yielded Rs. 30,360 against Rs. 29,624, while the number of licenses fell from 67 to 58. On the recommendation of the Opium Commission, all madak and chandu shops have been closed from the beginning of the current year, but consumers are allowed to make madak or chandu for private use, and not for sale, up to the limit of one tola. The further question whether legislative measures should not be adopted to suppress opium-smoking saloons, is now under the consideration of the Government of India.

19. *Methylated spirits.*—The quantity of spirits passed out in a methylated state rose from 54,282 gallons in 1894-95 to 59,854 in the past year, and the revenue also increased from Rs. 4,417 to Rs 4,942. This spirit is professedly imported or prepared for use in the arts, manufactures or chemistry, and the principle of taxing it at an *ad valorem* duty of 5 per cent. is based on the assumption that it cannot be used for human consumption. Experience, however, has shown that spirit methylated with wood-naphtha, the agent hitherto in use, can be manipulated into a potable liquor, and rules are now under consideration, the object of which is to ensure, before the spirit is cleared from the Custom House, that it shall have been rendered completely and permanently unfit for human consumption by mixing it with caoutchoucine. At the same time, as methylated spirit is used largely for burning in sick rooms and dressing rooms and for other domestic purposes, the restriction relating to use in arts, manufactures or chemistry has recently been withdrawn, and all spirit which has been rendered effectually and permanently unfit for human consumption has now been exempted from the whole of the custom duty in excess of 5 per cent. *ad valorem.* A similar exemption will be granted in respect of excise duty in the case of spirits manufactured in India. The Excise Commissioner reports that the trade in the so called country-made eau-de-cologne prepared with spirit methylated with wood-naphtha, which was at one time carried on to a large extent in Backergunge, has almost ceased.

20. *Offences against the Opium and Excise Laws.*—While the number of licensees prosecuted for infringing the conditions of their licenses rose from 273 to 342, the number of other persons prosecuted fell from 4,146 to 4,070. The percentage of convictions rose from 86·5 to 86·9. There was an increase in the number of persons arrested by the police, and a decrease in the number arrested by excise officers; but the Board point out that the latter have to work under the disadvantage of being unable to search houses without the presence of police officers. A marked increase in the number of prosecutions for illicit distillation of country spirit occurred in the Sonthal Parganas, and the Board are in correspondence with the local officers and the Excise Commissioner on the subject. Illicit distillation is also stated to prevail largely also in Bankura and Hooghly. A considerable increase in the number of convictions for illicit possession of opium occurred in Calcutta and Chittagong, and in the opium-producing districts of the Patna Division. Among foreign exciseable articles, liquor was smuggled from Chandernagore into Hooghly and the 24-Parganas, and from Bhutan, Sikkim and Nepal into the districts of Jalpaiguri and Darjeeling, while both ganja and liquor were smuggled from Nepal into Bhagalpur and Purnea, from the Garjhats into Cuttack and Puri, and from the Sirguja State into Palamau. Most of these cases are, however, reported to be of a petty character. The total amount of fines imposed for

breaches of the excise laws and rules was Rs. 79,377, of which Rs. 59,364, or 74·7 per cent., were realised. A sum of Rs. 67,585 was distributed in rewards to police and excise officers and informers as against Rs. 58,195 in the previous year.

21. The thanks of Government are due to Mr. Krishna Govinda Gupta for his successful administration of the Department, and to the Board for their supervision, during the year. The Excise Commissioner expresses his obligation to the district officers generally, and to some officers in particular, including the Hon'ble Rai Durgagati Banerji, Bahadur, C.I.E., Superintendent of Excise Revenue, Calcutta. The names of the officers specially mentioned by him will be communicated to the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Government of Bengal.

RESOLUTION REVIEWING THE ANNUAL REPORT ON THE BENGAL VETERINARY INSTITUTION AND THE WORKING OF THE CIVIL VETERINARY DEPARTMENT, BENGAL, FOR THE YEAR 1895-96.

REVENUE DEPARTMENT—AGRICULTURE.

Darjeeling, the 5th October 1896

RESOLUTION—No. 847T.—R.

READ—

Letter No. 1199A., dated the 31st July 1896, from the Director of the Department of Land Records and Agriculture, Bengal, submitting Veterinary Captain Gunn's Report on the Bengal Veterinary Institution and the working of the Civil Veterinary Department, Bengal, for the year ending 31st March 1896.

Read also the undermentioned Resolutions, Notifications and letters:—

(1) Bengal Government Resolution No 3886Agri., dated 22nd December 1891, announcing the gifts of Rs. 30,000 and Rs. 25,000 by Babu Sheo Bux Bogla and Sir Dinshaw Manockjee Petit, Bart, of Bombay, in aid of the establishment of a Veterinary Institution near Calcutta.

(2) Bengal Government Resolution No 1176Agri., dated 12th April 1892, announcing the offer of Rs. 2,500 made by Dr. Kenneth McLeod, late Professor of Surgery, Calcutta Medical College, for the founding of a scholarship of Rs. 10 a month in connection with the Bengal Veterinary Institution.

(3) Bengal Government Notifications Nos. 1, 2 and 3Agri, dated the 2nd January 1894, announcing the establishment of a Veterinary Institution at Belgachia and publishing rules for the admission of students and of sick cattle.

(4) Letter No 1790, dated the 7th July 1894, from the Director of the Department of Land Records and Agriculture, Bengal, submitting the Annual Report for the year ending 31st March 1894.

(5) Bengal Government letter No. 4180Agri, dated the 16th August 1894, to the Director of the Department of Land Records and Agriculture, Bengal, reviewing the abovenamed report.

(6) Letter No. 1034A., dated 17th July 1895, from the Director of the Department of Land Records and Agriculture, Bengal, submitting the Annual Report for the year ending 31st March 1895.

(7) Bengal Government letter No. 3754Agri., dated the 5th August 1895, to the Director of the Department of Land Records and Agriculture, Bengal, reviewing the abovenamed report.

(8) Bengal Government letter No. 44T.R., dated the 25th April 1896, to the Government of India, communicating the views of the Lieutenant-Governor on the subject of the proposed organisation of the Subordinate Veterinary Service in Bengal.

1. During the year under report the first students' course of the Bengal Veterinary Institution was completed; and during the current year that Institution and the Civil Veterinary Department in Bengal are to lose Veterinary-Captain W. D. Gunn, the first Superintendent of the Veterinary Department in Bengal. The Lieutenant-Governor therefore takes the opportunity afforded by the present report to review the progress made by the Institution and the Department generally in the last four years.

2. In November 1891, Babu Sheo Bux Bogla (now Rai Sheo Bux Bogla Bahadur) made the generous gift of Rs. 30,000 towards the establishment of a veterinary school and hospital for cattle in the vicinity of Calcutta, a scheme which had then for some time been under the consideration of the Government of Bengal. He subsequently presented Government with a site and house at Belgachia near Dum-Dum. Sir Dinshaw Manockjee Petit, Bart, of Bombay, also made a handsome donation of Rs. 25,000 towards the scheme. On the eve of his departure from India, Dr. Kenneth McLeod, whose labours in the cause of veterinary improvement are well known, endowed a scholarship to be held at the new school. A Committee was appointed to superintend the Institution, consisting of the Director of Agriculture, Babu Sheo Bux Bogla, and Mr. W. B. Gwyther, Executive Engineer; Dr. Koilash Chandra Bose was subsequently added to their number. The foundation stone was laid by Sir Charles Elliott on 20th April 1892. Shortly after this, the orders of the Government of India were received, conveying the Secretary of State's sanction to the establishment of a Civil Veterinary Department [illegible]

appointing Veterinary-Captain W. D. Gunn to be the first Superintendent of the Department in these provinces. He joined his appointment on 31st May 1892, and in conjunction with Mr. W. B. Gwyther set himself to work out the design of the buildings required for the Veterinary Institution. They were completed by the end of the year 1893, Government contributing to their cost the sum of Rs. 27,800 which was found necessary in addition to the donations already mentioned. Government also bears the cost of establishments and maintenance.

3. The Institution consists of a Veterinary School and a Veterinary Hospital. The former is named the "Kenneth McLeod Veterinary School," at the request of the donor, Babu Sheo Bux Bogla, and the latter the "Sir Dinshaw Manockjee Petit Veterinary Hospital." This building includes four wards for horses and four for cattle, a *post-mortem* room, a forge, and stables for isolation. The establishment of the Institution was notified in the *Calcutta Gazette* of 3rd January 1894, and the conditions for the admission of students to the school and of sick animals to the hospital were published at the same time; it was opened in the following month. Candidates for admission must be not less than 16 years of age and must either have passed the Entrance or the Middle English Scholarship Examination or have been promoted to the first class of a high school. Government offered in each year 15 stipends of Rs. 5 a month, tenable for two years, in addition to the Sheo Bux Bogla scholarship of Rs. 10, which is tenable for three years. The course of studies lasts for two years, each year comprising nine months of teaching, as at the Calcutta Medical College. The curriculum for the first year consists of elementary anatomy, animal physiology, materia medica, botany (so far as it relates to medical plants); that for the second year, of advanced anatomy, equine and bovine medicine and surgery, veterinary hygiene, obstetrics and breeding, and horse-shoeing. The teaching staff consists of the Superintendent, an Assistant Superintendent and two lecturers; and the teaching is in English. Throughout the course practical instruction is given at the hospital and forge, the students attending at all operations and performing the duties of dressers. An examination is held at the end of each year of study.

Notifications Nos. 1, 2, 3 Agri. of 2nd January 1894.

4. The first course of two years has now been completed, and the first final examination was held in March last; 19 students attended the course throughout, and 12 passed the examination and obtained certificates. Twenty-three students joined in 1895, and 22 in the present year; there are now 48 students at the Institution. Besides the holders of the 30 Government stipends and Sheo Bux Bogla scholarship, 7 students have been enabled to attend the school by the liberality of the Burdwan Raj and Darjeeling Municipality, each of which has given two stipends, and of the Chittagong, Patna and Balasore District Boards, which gave one stipend each. Of the 12 students who have completed their course and qualified, one has been appointed an overseer at the Institution, the services of two have been retained by the Calcutta and Howrah Municipalities respectively, one has been engaged by a local Veterinary Committee at Sitamarhi, four more have been selected for appointments at Patna, Dacca, Port Blair and Nagpur, and two have commenced private practice in Calcutta.

5. It has been found that the remote situation of the school is a source of inconvenience to the students, most of whom reside at a distance from Belgachia and are thus hindered from attending to the practical part of their training. This disadvantage to a certain extent keeps back young men from joining the school and, in order to remedy it, it has been decided to attach to the Institution a hostel capable of accommodating 35 students. This house is now in course of construction, at an estimated cost of Rs. 39,000, which sum has been provided by Government.

6. The Committee have recently proposed that the Institution should be raised to the status of a College, and the course of studies extended from two years to three; they consider that a three years' course is required to familiarize students with the handling of animals and to enable them to acquire a sufficient knowledge of pathology, a remark which applies more particularly to students of the literary and commercial classes, by whom the Bengal Veterinary Institution is now mainly attended. The extension of the course would, it is urged, enable all the students to qualify for appointment as

Senior Veterinary Assistants; this matter will be referred to at greater length below. The proposal is under the consideration of the Government of India.

7. The hospital attached to the Institution provides accommodation for 60 head of cattle and for 40 horses; and a daily charge is made which covers the cost of feeding, nursing, operations and general treatment, and is graduated according to the circumstances of the owner. The Superintendent has power to admit free of charge cattle belonging to persons who are in his opinion unable to pay. The following statements show the number of sick animals treated and the number of operations performed since the opening of the Institution:—

I.

Year.	Horses and ponies—				Cattle—				Dogs—				Sheep, deer and goats—			
	Admitted or brought for treatment.	Cured.	Died.	Remaining.	Admitted or brought for treatment.	Cured.	Died.	Remaining.	Admitted or brought for treatment.	Cured.	Died.	Remaining.	Admitted or brought for treatment.	Cured.	Died.	Remaining.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17

Total since the opening ...	266	20	85	16	8	395

8. The successful establishment of a veterinary school is only the first step in a movement which has for its goal the dissemination over Bengal of the knowledge and practical skill necessary to the proper treatment of animals. Apart from considerations of humanity, it is difficult to exaggerate the economic advantage of these acquirements in a country almost entirely dependent upon agriculture. When veterinary aid is made readily available, and in the course of time brought within reach of the cultivators, it will not be idle to look for an improvement in the condition of agricultural live-stock and in the state of agriculture generally. Cattle are the chief instrument of husbandry in this country, and though the treatment and rearing of horses, sheep and other animals which agriculturists may rear for profit have not been neglected, it is a knowledge of the diseases and treatment of cattle that has been chiefly aimed at in the studies of the Bengal Veterinary Institution. The Subordinate Veterinary Service which it is now proposed to form will be recruited from the passed students of that Institution, and they will be able to apply the knowledge

they have gained especially to the care of cattle, which must continue to be the main aim of the Department.

9. Sir Alexander Mackenzie intends to place before the local bodies of a certain number of districts a scheme for the establishment of veterinary dispensaries at head quarters stations with a suitable staff, and to invite them to co-operate in carrying it out. When this system has been fairly started, and when a larger number of trained men will have become available, it can be gradually extended to other districts; and where funds allow, itinerant Veterinary Assistants may be attached to the Sadar dispensaries. Dispensaries too would be opened, or Veterinary Assistants posted, in large Government or Wards' estates, and it may be hoped in large private estates also. In all dispensaries some income might be secured from the outset by charging fees on a reasonable scale, to be approved by the local bodies and by Commissioners of Divisions, for the treatment of horses and cattle belonging to well-to-do owners. For the present all the local inspection needed may well be performed by the Superintendent, with perhaps one or two Assistants; but, as the area covered by the scheme extends, it will be necessary to organise an inspecting staff. His Honour has proposed the following scales of pay for the Veterinary Assistants attached to dispensaries and for the Senior Veterinary Assistants or inspectors who would be selected from among them:—

Veterinary Assistants.	Senior Veterinary Assistants.
Rs. Rs.	Rs.
30 rising to 50 by quinquennial instalments	75
	85 after 5 years.
	100 „ 10 „
	120 „ 15 „

Officers in the lower grade would be allowed the liberty of private practice. The questions of the rates of pay and of the strength and cost of the supervising establishment are still, however, under the consideration of the Government of India, as well as the proposal, to which allusion has already been made, to raise the Bengal Veterinary Institution to the status of a College.

10. The Municipal Act has now been amended so as to enable municipalities to contribute towards the training of Veterinary Assistants, to provide employment for the trained men, and to establish dispensaries for the treatment of cattle and other animals. At Darjeeling an Assistant who qualified at the Lahore College is already employed, mainly on itinerary duties. The Lieutenant-Governor hopes that municipalities will take advantage of these additional powers, and that these and other local bodies and public-spirited landowners will co-operate with Government by founding scholarships and employing the passed Veterinary Assistants in dispensaries (or as itinerants) according to the plan which commends itself to His Honour and has been sketched out in the preceding paragraph.

The Lieutenant Governor desires that a detailed scheme may now be drawn up on these lines by Veterinary-Captain Gunn in communication with the Director of the Department of Land Records and Agriculture pending the receipt of the final views of the Government of India.

11. Veterinary-Captain Gunn has now been for more than four years Superintendent of the Civil Veterinary Department in this province. His successful labours in connection with the establishment of the Bengal Veterinary Institution have already been touched upon. He has in each year attended the principal horse and cattle fairs in the province and has helped to organise competitions and to adjudge prizes.

Sonepore, Berhampore in Shahabad, Sitamarhi, Kalimpong.

The usefulness and popularity of these competitions were evidenced during the year under report by the large increase in the entries for prizes at Berhampore mela and by the success of the shows which were held for the first time in connection with the very important cattle fairs at Sonepore and Sitamarhi: District Boards might with great advantage use the opportunity offered by other large fairs in their own districts to establish competitions of this kind, which are most useful in stimulating attention to questions of breeding as well as in encouraging the kinder treatment of cattle. They may count upon the willing advice and assistance of the officers of the Civil Veterinary Department.

These fairs have also enabled Veterinary-Captain Gunn to collect much valuable information regarding the breeds of cattle, and the remarks in his present report based upon his observations of the trans-frontier breeds and also of the stamp of mules brought for sale to the Military Department at Kalimpong are most interesting. With the object of obtaining information of this kind and also of investigating and combating outbreaks of cattle-disease, he has visited a large number of districts.

12. One of the most important matters connected with the breeds of cattle is the question whether it is possible to improve inferior breeds by mating the cows with bulls of other stocks. Numerous experiments have been made in this direction both by importing sires from Europe and Australia and by putting bulls of up-country breeds (such as the Hissar) to down-country cows. Between 1857 and 1860 Mr. Tayler, then Commissioner of Patna, imported some English bulls, and was able to produce a number of large-framed cross-breeds. The influence of the foreign stock is still felt, even now in the fifth or sixth generation; and many of the cross-breeds are excellent milkers. But this is almost the only experiment of its kind that has proved successful; and the larger number have been failures for various reasons, the chief one being the peculiar liability to disease of the imported bulls. Again, most of these attempts have aimed at increasing the yield of milk rather than at increasing draught power. It is for purposes of draught that Government is chiefly concerned in improving the breeds of village cattle, and the fact has often been overlooked that the best breeds for milk and draught purposes are not the same. There can be no doubt that improvement in draught cattle must be attained by the mixture of indigenous strains. It has been found that the bulls of Northern India, from Hissar or Hansi, are unfitted by their size to serve the very small cows of Lower Bengal, but possibly some improvement might be secured here by the introduction of the bulls of Bihar, which are only slightly larger than these cows. By way of experiment a number of Brahmini bulls have been brought down from Bihar and distributed in Lower Bengal; the results should be carefully watched.

13. The Lieutenant-Governor regrets that the Lower Provinces must soon lose the services of Veterinary-Captain Gunn; for this reason it is desired that he should draw up before he leaves the detailed scheme referred to in paragraph 10 of this Resolution in order that the benefit of his experience may not be lost to his successor. The thanks of His Honour are due to Veterinary-Captain Gunn for his able superintendence of both the Veterinary Institution and the Department, and for his thorough and interesting record of the year's work. They are due also to the Director of Land Records and the other members of the Committee of Management for their efficient supervision of the work of the Bengal Veterinary Institution.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette*, and that a copy of it be forwarded to the Director of Agriculture for information and communication to Veterinary-Captain Gunn.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,

Offg. Secy. to the Govt. of Bengal.

RESOLUTION ON THE REPORT OF THE AGRICULTURAL DEPARTMENT FOR THE YEAR 1895-96.

REVENUE DEPARTMENT—AGRICULTURE.

Darjeeling, the 5th October 1896.

RESOLUTION—No. 857T.—R.

READ—

Letter No. 836A., dated the 9th September 1896, from the Board of Revenue, Land Revenue Department, submitting the Report of the Agricultural Department for the year 1895-96.

THE eleventh Annual Report of the Department of Land Records and Agriculture, on the subjects of agricultural enquiry, agricultural experiments and agricultural improvements, which was due to Government on the 15th August 1896, was not received from the Board of Revenue until the 14th September 1896. The cause of the delay has not been explained.

2. *Analysis of districts.*—Analytical Reports which were prepared some years back exist for the districts of Burdwan, Dacca, Lohardaga and Cuttack. At the suggestion of the Agricultural Conference, held in Calcutta during the last cold weather, the Lieutenant-Governor desired the Director to cause analyses of one or two additional districts to be prepared by the agency at his disposal as opportunity offered. The Board suggest that Puri and Balasore might be taken in hand, but it appears to the Lieutenant-Governor desirable not to take up districts under survey and settlement until those operations are completed and the settlement statistics are fully available.

3. *Emigration to Burma.*—During the year under report, 136 persons emigrated from Bihar to Burma, against 304 in 1894-95. No reasons have been assigned for this large decrease, and the Lieutenant-Governor desires that the Director will endeavour to ascertain the cause. The arrangements made with the British India Steam Navigation Company for the conveyance of state emigrants from Bihar, Chota Nagpur and Orissa under certain conditions, continued in force during the year. The object with which this scheme was started was to induce Bihar zamindars to take up land in Burma and settle on it Bihar cultivators in the hope that a stream of emigration to that Province might be opened out in time. It is important that the working of the scheme should be closely watched, and the causes that impede its operation be ascertained.

4. *Silk experiments.*—In October 1895 Sir Charles Elliott decided that Mr. Nitya Gopal Mukharji's services were no longer required for the sericultural experiments on which he had been employed for many years; but it was conceded that the experiments might be continued under a travelling Overseer and three Assistant Overseers, tentatively, up to 31st March 1896. These men appear to have carried on with some success the work of instructing cocoon-rearing cultivators, and the experiments have therefore been still further prolonged.

At 11 stations, 6,574 kahans (a kahan = 1,280 cocoons) of seed-cocoons were raised during the year, while the quantity sold to cultivators amounted to 1,351 kahans, or 4,500 ounces, as against 1,035, 1,900, 2,134 and 2,388 ounces sold in the four previous years. Three nurseries were established under Mr. Mukharji's supervision near Berhampur, near Rampur Boalia, and at Garlibeta, respectively, all of which are recognized centres to which cocoon-rearers go in quest of seed. At these nurseries seed is microscopically selected and is sold to the cultivators, and rational methods of feeding and cleaning are followed. The nurseries have achieved considerable success.

The total expenditure incurred on silk experiments during the year was Rs. 7,563, against Rs. 8,259 expended in the preceding year.

5. *Fungoid diseases of betel-nut palms and pán vines.*—During the year information was received of the existence of a wide-spread plague among betel-nut trees in the districts of Noakhali and Backergunge. Enquiries into the origin and cause of the plague were made by Dr. G. Watt, Reporter on Economic Products to the Government of India, and also by Dr. G. King, Superintendent

of the Royal Botanical Gardens, and Mr. N. G. Mukharji, and the subject is still under consideration. Mr. Mukharji also reported upon a fungoid epidemic, which has broken out in *pán* gardens and has seriously affected the price of *pán*.

6. *Manure and crop experiments.*—Agricultural experiments were carried on in the farms belonging to the Burdwan and Dumraon Estates, and in the Government Farm at Sibpur; also in Government, Wards' and Private Estates. At Burdwan and Dumraon much attention was bestowed on the conservation of cow-dung for manure. Samples taken from both places were analyzed, and it was found that the sample from Burdwan was by far the richer of the two in nitrogen. At Sibpur Dr. Prain made a botanical study of several species of indigenous wheat plants, and obtained information of some value which is to be published by the Department in a separate Report. At Burdwan 96 cultivators undertook the cultivation of special crops, with selected seed, under the supervision of Mr. N. N. Banerji and the Farm Overseer The cultivation of Naini Tál potatoes appears to have been specially successful and popular there, as well as in the Dumraon Estate. At both places the planting of sugarcane in trenches was tried with results which show, as in previous years, the advantage of this method over the ordinary one of planting in shallow furrows. In two series of plots, the trenching system gave increased profits of Rs. 32 and Rs. 58 per acre, respectively. Crop-cutting experiments were made in the Jail gardens by the District Officers and the Settlement Officers of Orissa. Among improved agricultural implements, the Sibpur and Baldeo ploughs were tried with but indifferent success. A cream-separator, which was sent up to the Government Cinchona Plantation, seems to have found favour in the Darjeeling district; the raiyats who used it are reported to have found a good market for their butter.

7. *Veterinary Institution.*—The Lieutenant-Governor has in a separate Resolution reviewed the progress made by the Veterinary Department in Bengal since its foundation; and it is unnecessary, therefore, to refer to the subject again here.

The Provincial expenditure of the Civil Veterinary Department, Bengal, during the year 1895-96, amounted to Rs. 16,946-7-2.

8. *Miscellaneous.*—The Agricultural Department prepared and published, during the year, general forecasts of *rabi*, *bhadoi*, winter rice, wheat, jute and oilseed crops; also reports on the early and late cotton crops, statistics of the production and value of mineral gems, a list of agricultural implements and machines tested or in use, and Tables of Agricultural Statistics for 1894-95. Agricultural Exhibitions were held, during the year, at Sonepur, Cossipore, Hat Chapra in Nadia, Barhampur in Shahabad, Sitamarhi in Muzaffarpur, Kalimpong, Alipur and Falakata in Jalpaiguri, Tintanga in Bhagalpur, and Jajpur in Orissa The Exhibitions held at the eight first-named places were assisted by Government with grants of money, which were spent chiefly in prizes.

9. The total expenditure of the Department on agricultural enquiry and improvement (excluding the pay of superior establishment and the expenditure on silk experiments, and the cost of the Civil Veterinary Department) was Rs. 9,287, against Rs. 9,428 in the preceding year.

10. The time of the Director has in recent years been mainly devoted to the supervision of surveys and settlements. The work of agricultural research and agricultural improvement has on this account not received as much attention as its importance deserves. Now, however, that Settlement Officers have acquired experience, the Lieutenant-Governor hopes that the Director will be able to give more attention to agricultural research and the introduction of agricultural improvements in wards' and Government estates.

ORDER.—Ordered that the Resolution be published in the *Calcutta Gazette*, and that a copy of it, together with the Report and the forwarding letter of the Board of Revenue, be submitted to the Government of India in the Revenue and Agricultural Department, and a copy forwarded also to the Board of Revenue.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,

Offg. Secretary to the Govt. of Bengal.

WORKING OF THE PURI LODGING-HOUSE ACT.

MUNICIPAL DEPARTMENT.—MUNICIPAL.

Darjeeling, the 28th September 1896.

RESOLUTION—No. 752T.—M.

READ—

The reports from Commissioners of Divisions on the working of the Puri Lodging-house Act [IV (B.C.) of 1871, as amended by Act II (B.C.) of 1879] during the year 1895-96 in the various places to which it has been extended.

Read again—

The Resolution reviewing the Commissioners' reports on the working of the Lodging-house Act during the year 1894-95.

During the year under review the Puri Lodging-house Act, IV of 1871, as amended by Acts II of 1879 and I of 1884, was in force in the towns and areas mentioned in the margin. It was extended to Gewankhali, and in Jajpur, where the Act had before been introduced, it was for the first time put into operation. The Jagannath Road Fund and the Puri Lodging-house Fund have, it seems, been amalgamated from 1st April 1896, under the name of the "Pilgrims' Lodging-house Fund," but this does not appear to have received the sanction of Government, and the circumstances rendering the amalgamation necessary should now be explained. Most of the reports on the working of the Act were received after the prescribed date, and Commissioners are requested to arrange for their punctual submission in future.

Extension of the Act.

In the Burdwan Division—
1. Garhbeta
2. Dantan.
3. Uluberia.
4. Gewankhali.

In the Presidency Division—
5. Nadia.

In the Chittagong Division—
6. Sitakund.

In the Patna Division—
7. Gaya.

In the Bhagalpur Division—
8. Deoghar.

In the Orissa Division—
9. The "Chattis" on the Jagannath Road, in the district of Cuttack.
10. Chandbali.
11. The "Chattis" on the Jagannath Road, in the district of Balasore.
12. Puri town.
13. The "Chattis" on the Jagannath Road, in the district of Puri..
14. Jajpur.

Licensed lodging-houses.

2. The number of licensed lodging-houses increased from 1,721 in 1894-95 to 2,066. The increase is most marked at Sitakund, where the number rose from 53 to 452. During the fair upwards of 30,000 persons assembled—a number considerably above the average, which is attributed partly to the opening of the Assam-Bengal Railway, and partly to the fact that the year was considered an auspicious one for pilgrimage. There was a decrease in the number of lodgers in the *chattis* along the Jagannath Road, in the district of Cuttack, as fewer Bengali pilgrims visited the shrine during the Car festival, and some of the houses were let to permanent residents and took out no licenses. It should be stated in future reports whether, in issuing licenses, effect is given to the suggestion made in the last year's Resolution that no lodging-house should be licensed unless fees are paid for the full number of pilgrims it can accommodate.

Income.

3. The total income of the year was Rs. 39,969, against Rs. 36,352 in 1894-95, the opening balance being Rs. 29,954, and the closing balance Rs. 36,377. The receipts from fees for licenses to receive pilgrims and certificates under section 8 of the Act increased from Rs. 25,743 to Rs. 30,444, the increase being largest at Nadia, Sitakund, and Gaya. The decrease of receipts under the heading "Other fees" from Rs. 2,856 to eight annas is accounted for by the fact that the rents of roadside lands were, under the instructions issued in last year's Resolution, treated as miscellaneous receipts.

Expenditure.

4. The expenditure of the year fell from Rs. 38,262 to Rs. 33,546, including contributions amounting to Rs. 8,576, of which Rs. 5,454 appears to have been paid to the Puri Municipality for sanitary and medical purposes. No mention of this is made in the report, nor is it explained why the contributions at Deoghar were reduced from Rs. 1,460 to Rs. 600. The expenditure on conservancy declined from Rs. 8,072 to Rs. 5,900, the decrease being most marked at Gaya. At the same time, owing to extensive repairs carried out in the *chattis* along the Jagannath Road in the districts of Cuttack and Puri, the expenditure under

Medical, Conservancy, Construction and Repairs has been amalgamated: the amount spent under each head should in future be shown separately. Considering the objects which these funds are intended to serve, the reduction of expenditure cannot be regarded as satisfactory; the closing balance is unduly large, and the Lieutenant-Governor has little doubt that more money might have been usefully spent on sanitary improvements.

Prosecutions.

5. The number of persons prosecuted for receiving pilgrims without a license, for taking more than the licensed number, and for other offences against the Act and the bye-laws was 278 against 254 in 1894-95, and the number convicted was 270 against 222. The amount of fines realised declined from Rs. 2,544 to Rs. 2,540. In the town of Puri 143 persons were prosecuted, including 7 whose cases were pending at the end of 1894-95; of these 136 were convicted and 7 acquitted.

Public health.

6. Cholera broke out in an epidemic form in the *chattis* along the Jagannath Road, in the district of Cuttack. There were altogether 22 cases, resulting in two deaths. The number of indoor patients admitted into the hospital was 142 during the year against 92 in the preceding year, and the total number of deaths rose from 2 to 6. At Deoghar influenza, cholera and small-pox were very prevalent, and the deaths among the inmates of the lodging-houses numbered 9 against 4 in 1894-95. In the town of Puri cholera cases rose from 173 to 207, and the number of deaths from 141 to 151. The number of pilgrims admitted into the cholera hospital at Gaya was 142, of whom 108 died, as against 52 and 45, respectively, in the previous year. It is stated that the outbreak of the disease commenced with the advent of the pilgrims. The deaths from all causes among pilgrims rose during the year from 80 to 336. At Nadia there were nine cases of cholera, but the necessary sanitary arrangements were adopted, the pilgrims were sent away promptly after the close of the festival, and the progress of the disease was thus stayed.

The Act appears to have been worked with vigour in most of the places to which it has been extended. A combination entered into by the lodging-house keepers at Gewankhali to defeat the Act by refusing to take out licenses was successfully broken up by prosecuting some of them, and all have since taken out licenses. In the *chattis* along the Jagannath Road, in the district of Cuttack, 18 wells were repaired, a new well was sunk, and a tank which had been dug in the preceding year was further excavated. It is stated that two very unwholesome tanks one belonging to Raja Baidyanath Pandit, of Cuttack, and the other to Raja Baikanta Nath De, of Balasore—have not been put into proper order, although the owners have repeatedly been requested to do so. The Lieutenant-Governor hopes that it may not be necessary to refer to the subject again and that these gentlemen will recognise their obligation to prevent their property from being a source of danger to the public. In the town of Puri some new lodging-houses were constructed, 97 new latrines were built, a large quantity of foul water and silt was removed from the Swetganga tank, two other tanks were thoroughly cleaned and many minor improvements were carried out. The Magistrate of Puri is of opinion that the Act is in some respects defective; and proposes to submit a special report on the subject. His Honour is glad to observe that the opposition with which the introduction of the Act was met at Nadia is beginning to die away in consequence of the efforts that are made to provide for the convenience of pilgrims and to guard against epidemics.

ORDER.—Ordered that a copy of this Resolution be submitted to the Government of India in the Home Department, and that copies of it be forwarded to the Commissioners of the Burdwan, Presidency, Chittagong, Patna, Bhagalpur and Orissa Divisions for information.

Ordered also that a copy of the Resolution be communicated to the Sanitary Commissioner and to the Sanitary Board, and that it be published in the *Calcutta Gazette* for general information.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Govt. of Bengal.

FORECAST OF BHADOI CROPS IN BENGAL.

THE following is published for general information.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Dated the 5th October 1896.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

First Forecast of the Bhadoi crops in Bengal, 1896.

1. *Character of the season.*—In the month of April there was an almost entire absence of rainfall in these Provinces, except in East Bengal. In May, showers were of daily occurrence in North and East Bengal, and the monthly fall was in excess of the normal. In South-West Bengal and Bihar the rainfall was practically normal, but in Orissa and Chota Nagpur it was below the normal. The rainfall received in June was much more copious in the South than in the North of the Province—a result chiefly due to cyclonic storms in the Southern districts in the latter half of the month. Whereas, in South-West Bengal, Orissa and Chota Nagpur, the rainfall was above the normal; in North Bengal if was less than half the normal, and in Bihar slightly less than the normal. The rainfall in July, though rather irregular, did not differ to a large extent from the normal, except in East Bengal, where the fall was noticeably short. In August, the rainfall was deficient throughout these Provinces, except in Orissa. In the first week of September there was general rain in all parts of these Provinces, except in Bihar, where only light scattered showers were reported. In the second week of September the deficiency of rain continued in parts of Bihar, but the rainfall was general in all other parts of this Province. Floods did injury to the *bhadoi* crops throughout Orissa in July, and again in August.

2. *Area cultivated*.—The total area sown with *bhadoi* crops during the current year appears, from the Returns attached to this note, to amount to 15,955,500 acres, against 15,756,600 acres sown in 1895.

3. *Character of the crop.*—Out of the 45 districts of these Provinces, only one district, Palamau, returns a bumper crop. Four districts, Birbhum, Bankura, Hazaribagh and Singhbhum, return an average crop of 16 annas; 12 districts return crops varying from 12 to less than 16 annas, and the 28 districts, shown in the margin, estimate the crops at less than 12 annas. From Shahabad, Muzaffarpur, Cuttack, and Puri, the crop is returned even below 8 annas. On comparing these figures with those of 1895,

Nadia, Murshidabad, Jessore; all districts of the Rajshahi Division, Mymensingh, Noakhali and Chittagong; all districts of Patna, Bhagalpur and Orissa Divisions, except Gaya and Angul, and Manbhum.

as shown in column 8 of the appended returns, it will be seen that 12 districts report better crops, 2 districts report equal crops, and 30 districts worse crops than those of last year. The estimated general outturn of the *bhadoi* crops is consequently lower, and is given as 11 annas, against 13 annas estimated for the *bhadoi* crops of 1895.

N. N. BANERJEI,

Assistant Director of the Dept. of Land Records and Agriculture, Bengal.

COUNTERSIGNED.

P. C. LYON,

Offg. Director of the Dept. of Land Records and Agriculture, Bengal.

DARJEELING,
The 26th September 1896.

Preliminary Forecast of the Bhadoi Crops of Bengal, 1896.

1	2	3	4	5	6	7	8	9	10	11
District.	**Total area of district in acres.**	**Total area in district estimated to be under cultivation in acres.**	**Names of *bhadoi* crops.**	**Approximate normal area *under each specified bhadoi crop* in acres.**	**Approximate area *last year, under each specified bhadoi crop*, in acres.**	**Estimated area *this year, under each specified bhadoi crop*, in acres.**	**Taking 16 annas to represent the average outturn, how many annas represent outturn last year?**	**Taking 16 annas to represent the average outturn, how many annas will represent this year's outturn?**	**Remarks by District Officers.**	**Remarks by the Department of Land Records and Agriculture, Bengal.**
							Annas.	Annas.		
Burdwan ...	1,726,000	1,293,000	*Bhadoi* paddy ...	173,700	165,700	16	9½	12½	Owing to absence of rain in parts of the district, much difficulty has been experienced in transplanting *aman* paddy. In some tracts it has not been transplanted. More rain is wanted all over the district. If this does not come, the outturn will be less than that now estimated for.	
			Indian-corn (maize)...	3,000	3,000	3,000	14	16		
			Other *bhadoi* cereals and pulses.	8,100	7,100	7,600	9	14		
			Other food-crops (*e.g.*, vegetables).	700	600	600	12	16		
			Indigo	6,000	5,800	5,200	10	14		
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	23,000	21,600	19,000	10	13		
			Total ...	213,500	203,800	202,900	9½	13		
Birbhum ...	1,121,920	909,000	*Bhadoi* paddy ...	150,000	130,000	140,000	10	16	The rain was sufficient at first, and then partially failed. The whole crop has not been planted out, and a portion of the high lands will not be planted this year unless heavy rain falls within 10 days. The estimates now given take for granted that the rainfall will be seasonable.	The normal area of maize has been changed by the Collector from 3,000 acres to 2,000 acres.
			Indian-corn (maize) ...	2,000	1,800	2,000	15	16		
			Other food-crops (*e.g.*, vegetables).	1,800	1,200	1,500	10	16		
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	2,500	2,000	2,500	10	16		
			Total ...	156,000	134,700	146,000	10	16		

1	2	3	4	5	6	7	8	9	10	11
DISTRICT.	Total area of district in acres.	Total area in district estimated to be under cultivation in acres.	Names of *bhadoi* crops.	Approximate normal area *under each specified bhadoi crop* in acres.	Approximate area *last year under each specified bhadoi crop*, in acres.	Estimated area *this year under each specified bhadoi crop*, in acres.	Taking 16 annas to represent the average outturn, how many annas represented outturn last year?	Taking 16 annas to represent the average outturn, how many annas will represent this year's outturn?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
							Annas.	Annas.		
Bankura ..	1,677,440	642,800	*Bhadoi* paddy	26,700	14,800	26,500	10	} 16	The average area under almost all the *bhadoi* crops reached the normal owing to copious rainfall during the sowing season. A full average outturn may be looked for except for indigo which has been estimated at 11 annas.	
			Bajra	900	600	900	13			
			Mandua	1,200	1,000	1,200	14			
			Indian-corn (maize) ..	4,900	2,600	4,400	13			
			Other *bhadoi* cereals and pulses.	9,800	8,200	9,500	13			
			Other food-crops (*e.g.*, vegetables).	800	200	800	14			
			Indigo	2,200	2,200	2,200	17	11		
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	7,700	5,200	8,400	13	16		
			Total ...	54,200	35,000	53,900	13	16		
Birbhum ...	3,393,800	2,111,500	*Bhadoi* paddy ..	116,700	99,700	113,200	10	14	A larger area than that of last year has been brought under cultivation owing to timely and seasonable rainfall.	
			Bajra	9,000	6,000	6,500	12	14		
			Mandua	3,200	1,800	2,500	14	14		
			Indian-corn (maize)...	22,000	22,000	21,000	16	12		
			Other *bhadoi* cereals and pulses.	53,000	49,000	51,600	10	14		

			Other food-crops (*e.g.*, vegetables).	27,600	22,500	24,600	10	13	
			Indigo	38,700	45,200	48,700	12	10	
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	59,500	45,700	48,200	11½	13½	
			Total ...	342,700	291,900	316,300	12	13½	
Hooghly ...	1,096,080	702,200	*Bhadoi* paddy ..	85,500	80,700	45,600	8	13	The rainfall in some parts of the district being a little more favourable this year than in the previous year, there will probably be an increase in the average outturn of the crops.
			Indian-corn (maize) ...	100	100	108	9½	10	
			Other *bhadoi* cereals and pulses.	3,100	2,000	1,600	8	12	
			Other food-crops (*e.g.*, vegetables).	3,500	1,200	3,600	11	12	
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	39,600	28,100	32,500	12	14	
			Total ...	131,800	62,100	83,400	9	13	
24-Parganas ...	1,344,640	1,088,900	*Bhadoi* paddy ...	108,700	99,800	102,800	10½	15	The difference between the normal area and the area sown this year is due to the want of sufficient rain at the sowing season. Subsequent rain did much good to the *bhadoi* crops, and the outturn is expected to be better than that of last year.
			Other *bhadoi* cereals and pulses.	3,000	900	2,600	10	12	
			Other food-crops (*e.g.*, vegetables).	4,900	3,600	5,200	13	15	
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	42,000	35,300	41,500	13½	14	
			Total ...	158,600	139,600	152,100	10½	14½	

1	2	3	4	5	6	7	8	9	10	11
District.	Total area of district in acres.	Total area in district estimated to be under cultivation in acres.	Name of *bhadoi* crops.	Approximate normal area *under each specified bhadoi crop* in acres.	Approximate area *last year, under each specified bhadoi crop*, in acres.	Estimated area *this year, under each specified bhadoi crop*, in acres.	Taking 16 annas to represent the average outturn, how many annas represented outturn last year?	Taking 16 annas to represent the average outturn, how many annas will represent this year's outturn?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
							Annas.	Annas		
Nadia	1,788,160	1,303,000	*Bhadoi* paddy ...	260,000	237,300	253,600	9	8	More land has been sown this year with *bhadoi* crops, as the rains in the beginning of May last much facilitated cultivation, but the scanty rainfall during the present month has much affected the outturn.	
			Indian corn (maize)	1,000	1,000	800	10	6		
			Other *bhadoi* cereals and pulses.	42,200	45,000	33,500	11	9		
			Other food-crops (*e.g.* vegetables).	20,500	18,500	21,900	12	10		
			Indigo	52,100	51,800	57,300	11	10		
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	53,800	53,300	54,400	12	10		
			Total ...	437,200	408,900	417,000	11	9		
Murshidabad	1,872,160	985,500	*Bhadoi* paddy ...	252,900	212,300	211,500	9	9	The decrease in the area sown this year, as compared with the normal area, is due to the deficiency of rainfall during the sowing season. This also explains the decrease in the outturn.	The estimate of area under indigo this year has not been returned. Last year's figure has been reproduced.
			Indian corn (maize)	300	200	300	8	9		
			Other *bhadoi* cereals and pulses.	2,000	1,900	1,900	9	10		
			Other food-crops (*e.g.*, vegetables).	12,700	7,500	7,500	11	11		
			Indigo	59,200	51,800	51,300	12	12		
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	35,000	28,100	28,500	11	11		
			Total ...	362,100	301,200	300,700	10	10		

Jessore ...	1,872,000	1,116,800	*Bhadoi* paddy	314,400	314,300	314,000	10	8	The decrease in the area of *bhadoi* paddy this year, as compared with last year's area, is due to insufficient rainfall during the year. The increase in area under other non-food-crops is due to the high price at which jute was sold last year.	The normal area under *bhadoi* paddy, other food-crops and indigo as shown in the final forecast of the *bhadoi* crops of 1895 has been reduced by the Collector by 100 acres in each case.
			Other *bhadoi* cereals and pulses.	8,800	8,400	8,400	10	10		
			Other food-crops (*e.g.*, vegetables).	18,800	16,600	16,600	10	10		
			Indigo	17,700	17,700	17,500	14	14		
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	49,500	41,000	47,100	12	15		
			Total ...	409,200	388,000	403,600	10	8		
Khulna ...	2,103,942	870,000	*Bhadoi* paddy ...	56,400	51,500	52,600	12	12½	The outturn is expected to be a little better in the Sadar and Sarkhira subdivisions, than in Bazirhat. The Deputy Collector of Bazirhat attributes the low outturn to insufficient rain.	
			Other *bhadoi* cereals and pulses.	3,200	3,100	3,200	10	16		
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	29,800	28,600	28,600	12	11½		
			Total ...	89,400	83,200	84,400	12	13		
Rajshahi ...	1,490,365	1,085,900	*Bhadoi* paddy	104,500	100,700	103,600	11½	8	The increase in the area sown this year under the heads *bhadoi* paddy and other non-food-crops is due to timely rainfall at the sowing season. The low outturn of *bhadoi* paddy which is anticipated is due to deficiency of rainfall afterwards.	
			Other food-crops (*e.g.*, vegetables).	1,600	800	800	12	12		
			Indigo	9,000	8,000	8,000	16	12		
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	103,500	80,500	80,600	15½	13		
			Total ...	224,900	190,000	199,000	13½	10½		

1	2	3	4	5	6	7	8	9	10	11
DISTRICT.	Total area of district in acres.	Total area in district estimated to be under cultivation in acres.	Names of *bhadoi* crops.	Approximate normal area *under each specified bhadoi crop* in acres.	Approximate area *last year, under each specified bhadoi crop*, in acres.	Estimated area *this year, under each specified bhadoi crop*, in acres.	Taking 16 annas to represent the average outturn, how many annas represented outturn last year?	Taking 16 annas to represent the average outturn, how many annas will represent this year's outturn?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
Dinajpur ...	3,655,680	1,745,000	*Bhadoi* paddy	138,000	138,000	138,000	Annas. 16	Annas. 8	*Bhadoi* paddy, and in fact all the *bhadoi* crops have suffered considerably from want of rain in July and August, and hence the poor outturn anticipated.	
			Janer	7,000	7,000	7,000	16	10		
			Marudea	7,000	7,000	7,000	12	5		
			Other food-crops (*e.g.*, vegetables).	100	100	100	10	8		
			Indigo	100	100	100	18	10		
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	99,700	99,700	99,700	18	8		
			Total ...	241,900	241,900	241,900	13½	8		
Jalpaiguri ...	1,934,600	1,005,040	*Bhadoi* paddy	186,500	187,640	185,700	11	7½	The figures in columns 2 and 3 exclude the area of tank Chotagrams, viz. 1,060 acres and 700 acres respectively, transferred to Assam. The increase in this year's area under *bhadoi* crops is due to the extension of cultivation in the Duars. Want of seasonable rain retarded the growth of plants.	
			Indian-corn (maize) ...	2,000	2,000	2,000	10	8		
			Other *bhadoi* cereals and pulses.	4,400	4,300	4,300	12	8		
			Other food-crops (*e.g.*, vegetables).	5,200	5,100	5,100	12	10½		
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	86,700	86,400	88,400	11	10		
			Total ...	284,800	285,400	286,500	11	8		

Darjeeling ...	744,960	189,400	*Bhadoi* paddy	32,300	32,300	32,300	14	9	Want of seasonable rain has injuriously affected the outturn of all crops, specially *bhadoi* paddy.
			Maadua	7,700	5,300	5,300	14	11	
			Indian-corn (maize)	17,700	22,200	22,200	14	10	
			Other food-crops (*e.g.*, vegetables).	4,500	4,500	4,500	13	11	
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	15,300	15,300	15,300	15	11	
			Total ...	77,500	79,800	79,800	14	10	
Rangpur ...	2,231,040	1,602,700	*Bhadoi* paddy ...	275,400	275,400	260,800	16	10	The decrease in the area under *bhadoi* paddy sown this year is due to excessive fall of rain at the sowing season. The outturn is estimated as worse than that of the previous year owing to excessive rainfall in the early part of the season and long-continued drought afterwards. Want of seasonable rainfall from beginning to end made the prospects worse than those of last year.
			Indian corn (maize)...	100	100	100	16	12	
			Other *bhadoi* cereals and pulses.	91,000	91,000	91,000	16	12	
			Other food-crops (*e.g.*, vegetables).	23,700	23,700	23,700	16	16	
			Indigo	7,700	7,000	7,000	14	9	
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	286,300	286,300	286,800	16	10	
			Total ...	684,200	683,500	669,400	16	10	
Bogra ...	929,280	421,000	*Bhadoi* paddy ...	140,000	105,000	105,000	10	12	Want of insufficient rain in the latter part of July and in August damaged the growth of the crop to some extent.
			Other non-food-crops, including jute and cotton, as shown in the special forecasts.	76,000	100,000	100,000	13	10	
			Total ...	216,000	205,000	205,000	11½	11	
Pabna	1,176,960	889,500	*Bhadoi* paddy	123,200	123,000	120,000	15	10	Late and scanty rainfall is supposed to be the cause of the small area cultivated with *bhadoi* paddy and vegetables, and accounts also for the poor outturn expected from them. It is reported from Sirajganj that low floods have made a certain portion of the area unfit for sowing pulses.
			Other *bhadoi* cereals and pulses.	50,500	60,000	50,000	9	8	
			Other food-crops (*e.g.*, vegetables).	102,000	106,700	108,000	12	10

No. 3929M., dated the 3rd October 1896.—The following report is published for general information.

H. H. RISLEY,

Secretary to the Government of Bengal.

INSPECTION REPORT OF THE SANITARY COMMISSIONER ON THE DARJEELING MUNICIPALITY.

I INSPECTED the Darjeeling Municipality on the 6th, 8th, 9th and 10th June 1896, in company with Mr. Silk, the Sanitary Engineer, and Mr Herlihy, the local Conservancy Inspector. I did not, however, write a report of my inspection at the time, because I wished to see the condition of the town in the height of the rains before expressing an opinion on its sanitary arrangements. I have now been round again (on the 5th and 7th instant), and the following is an expression of the opinion I have formed as the result of both inspections.

Constitution of the Municipality.—In a town where the Municipal Committee is thoroughly representative of the various local interests, and the executive members are composed of the Deputy Commissioner (Mr. Greer) as Chairman, a Government retired officer (Captain Power) of great experience and himself a large local landed proprietor as Vice-Chairman, and several distinguished gentlemen as members, such as General Yeatman-Biggs, Commanding the Presidency District, who has a very wide experience of sanitation in Indian hill stations, two retired members of the Civil Service, viz., Messrs. Worgan and Taylor, the Civil Surgeon of the district, and some of the leading citizens and planters of the district, a high standard of municipal administration is to be expected, and I may say at once that it has been attained, Darjeeling being in this respect much in advance of any of the hill stations in the Punjab (including Simla), of all of which I have personal experience. By this I must not be understood to mean that the sanitary administration here is perfect: it is far from that; but judging from the advance that seems to have been made in recent years, and the eager desire on the part of the authorities to carry out suggested reforms, the time is probably not far distant when there will be little or nothing to find reasonable fault with in the municipal administration of Darjeeling.

Market.—As I commenced my inspection at the meat market, I will deal with that first. The building itself is an excellent design, and the system of stamping the meat 1st, 2nd or 3rd class, according to the quality of it, is a very good one. The stalls, however, are not all good, many of them being uneven wooden tables. They should be built in regular lines of arched masonry platforms, with marble top slabs. The butchers' chopping blocks are the worse for wear, and I noticed that they were not as cleanly kept as is desirable. I saw old particles of grease and flesh lodged in the cuts. These blocks need scraping daily. The flushing arrangements inside the meat shed are also capable of improvement. At present bhistees water the floor, while a sweeper sweeps it. A better and more economical arrangement would be to attach a hose to the hydrant which is just outside the market, and flush the floor once or twice a day, in the same manner as is done on boardship. But before this is done, the drainage needs to be attended to. At present this shed is drained on one side only, and beneath the middle of the floor by a cemented drain which connects with a main drain somewhere under the road, thence along the new covered market, and ultimately into the Lochnagar outfall. A better arrangement would be to block the channel which at present runs under the meat shed, and to construct a proper Raniganj half-pipe drain all round the shed, connecting it direct with the Lochnagar outfall, which is a few yards only from the northernmost corner of the shed. This would be cleaner and more satisfactory in every way than the present insanitary arrangement. The ground at the back of the meat shed between the shed and the bank is low-lying and marshy in the rains. It should be raised a few inches, which can very easily be done, and sloped towards the proposed drain.

The covered market recently constructed is a great improvement. I have no fault to find with it; the structure is good and suitable, and the drainage

around it is efficient. The latrine accommodation alongside for Europeans and Natives might, however, be improved, as I pointed out to the Conservancy Inspector on the spot.

Drainage—On the whole is remarkably good. There are various descriptions of drains, viz., ordinary stone, patent stone, Mirzapore flag, concrete, cement, and Raniganj half-pipes. It is proposed gradually to make them all of a uniform design. The difficulty, however, I understand, is to find material strong enough to stand the force of storm water. Few people have any idea of the destructive influence of the volume of water which during the rainy season rushes down the drains with a force and velocity which is calculated to try the strength of the best cement or concrete. Nothing, it appears, has yet been discovered to thoroughly withstand the force of Darjeeling rain water for long, but Raniganj half-pipes seem to answer best here as elsewhere. I think, therefore, that the Municipality would be wise to construct all their drains of this material in future. Not only would it look better and wear longer than the majority of the existing drains, but being wedged and strongly cemented together would be less liable to collect offensive matter, as is the case at present, in the interstices of stone drains. This is one of the principal causes of the bad smells which are so frequently met with and naturally complained of in Darjeeling. In this respect some of the most offensive drains are the road-side drain from Meadow Bank to the Kutchery, with the house connections on the way, the house-connection drains along the Auckland Road, the drain which runs past Glen Eden, and the Clune Avon Jhora, the drain with its connections along the road from the bazar to the Botanical Gardens, especially at the point in the middle of the Gardens where the main drain ceases to be pucca, the Jitan Jhora, which collects all the drainage of the upper portion of the bazar, the drain from near the Railway Station to the Lowis Jubilee Sanitarium, the drains from Rockville and the houses on the Eastern Jalapahar Road, which join the Calcutta road-side drain and others. Not only are these feeder drains defective in construction, but they are made the more offensive by the disgusting habit of servants using them as latrines and urinals, and private mehters emptying the contents of house-latrines into them in order to save themselves the trouble of going to the nearest public latrine or night soil depôt. Within the last few days three such cases have come to my knowledge—one at Rockville, one in the vicinity of the Grand Hotel, and the third at Meadow Bank. If landlords will not provide proper connecting drains, and if occupiers of houses will not take the trouble to insist on their servants desisting from the insanitary habits referred to, they have themselves only to blame for the mal-odours which are prevalent. I am told that it used to be, and probably still is, a common practice for the municipal sweepers, on a dark and rainy night, to empty the contents of their drums into the drains, so as to save themselves the trouble of going to the night-soil depôts. I cannot say what was the practice in former years, but it certainly does not appear that this insanitary habit is carried on to any great extent, if at all, now-a-days. Mr. Herlihy informs me that he and his supervising staff keep a very strict watch over the mehters in this respect. Every morning early a special establishment goes round inspecting all the municipal drains, and if night-soil was thrown into them the previous night, some trace would generally be found in the morning and the mehters of the beat would be fined. They know this, and accordingly refrain from committing the offence. I am convinced, after careful personal investigation, that it is not the fault of the Municipality that parts of Darjeeling are often mal-odorous; but, as I have already said, this is due (1) to the faulty construction of private drains, and (2) to the carelessness or wilful insanitary habits of the peoples' own servants. There should be a standard plan of feeder drains from private houses, and the plan should be Raniganj half-pipes.

As regards drainage outfalls, the two principal ones are the Lochnagar Jhora and the Jitan Jhora, situated, roughly speaking, on either side of the bazar. The former collects the drainage and sullage from the Chowrasta half of the station; the latter that of the southern portion of the native town. The drainage of the major portion of the bazar also goes into this outfall, while some of it flows into the main drain which runs through the Botanical Gardens. The upper portion of the Lochnagar outfall is Raniganj half-pipes set in cement and

concrete; below the cart-road it is built of stone with plank flooring at intervals "to protect the drain," which, I was informed, "cannot otherwise withstand the force of the water." I do not like the arrangement, not only because offensive matter finds its way into and collects under and in the crevices of the planks, and gives off offensive smells under the action of sun and light, but also because an inclined plank floor acts as a shoot which increases the velocity of the flow of water and causes damage to the sides and floor of the drain at the end of the shoot. This is what has actually happened in this outfall jhora. The best plan, I think, would be to construct wherever possible a number of shallow falls along the course of the jhora, which would form water cushions and have the effect of checking the velocity of the water, cause less damage than the present arrangement, and also look better.

The Jitan Jhora, on the other side of the bazar, is pucca along a part of its course; that is, it is constructed of concrete cement, and is so far good; but this good arrangement does not go far enough, for before the drain reaches the Victoria Waterfall Road it becomes a stone channel and immediately gets very offensive in consequence of sullage, &c., collecting in the interstices of the stones. It is very desirable that Ranigan j half-pipes or concrete cement should be continued in this outfall jhora to a point below the Victoria Road. Similarly, the main drain which goes through the Botanical Gardens should be made pucca to a point below the Gardens. These Gardens are a favourite pleasure resort which is spoilt by the offensive smells which emanate from the drain in question, especially at the point in the middle of the Garden where the pucca ceases and the stone channel begins. The Clune Avon Jhora past Glen Eden should be dealt with in the same way. This drainage channel above the Western Jalapahar Road is well built and cemented; below the road it is merely a nalla with a rocky and uneven bed, in consequence of which there are numerous evil-smelling pools in which sullage and sewage collects and putrifies in the dry weather.

During the rains, when there is always a strong continuous flow of water, there is no necessity for special flushing arrangements. In the dry weather special arrangements have to be made. The present system, by which flushing taps are provided over the main drains, is wasteful because the force with which the water flows out of the taps is not sufficient to flush the drains effectually. I would suggest removeable wooden shutters at intervals along the drains, let into grooves so as to dam up the water at the time of flushing, and then to let it out with a rush, which would have the effect of sweeping away all matter that may have lodged in the drain; thus the drain would be thoroughly cleaned with a minimum expenditure of water.

The above are the only defects that exist in the main drainage system of Darjeeling, which on the whole is admirable. If the private connecting drains were as good, there would be nothing to complain of in this respect. If there is any provision in the municipal laws by which house-owners can be compelled to construct connecting house-drains according to a standard pattern, no time should be lost in compelling them to do so.

Water-supply.—The springs at Senchal were running freely and well when I inspected them with Mr. Silk. We also inspected the storage reservoirs: in one of them the floating pipe was out of order owing to the joint having rotted, which is not surprising, seeing that it was made of canvas instead of metal. The storage tanks should be converted into filter beds. This would prevent a large amount of mineral and vegetable matter from being swept down the pipes, as happens at present, and might, in fact probably would, clog the proposed Pasteur filters. Moreover, filter beds would assist the Pasteur system, inasmuch as the water would be fairly clean before it entered the Pasteur filters, and thus the candles would not require to be cleansed as often as would otherwise be necessary, and they would also work more easily. It will soon be necessary to tap one or two more springs up at Senchal, for the present supply of water is insufficient, and there is scarcely any to spare, during the dry weather, for road-watering and drain-flushing.

Latrines and urinals.—There are 31 public latrines and 11 public urinals scattered throughout the town, and of these five of the former and two of the latter are reserved for the exclusive use of females. There are 307 private latrines. The public latrines are on the whole well looked after, but being built

and worked on the combination principle, it is impossible to keep them absolutely clean and free from smell. At present liquids and solids are collected together and stored in tubs until the evening, when, between the hours of 8 and 10 P.M., the latrine mehters separate them as much as possible in order to discharge the liquid down the pipes which are now connected with many of the public latrines, and to remove the balance to the trenching ground. This process, as will readily be imagined, is one that must and does give off abominable smells which are most sickening to passers-by. In June last I explained all this to the municipal authorities, and strongly recommended them to put up their next latrine on Donaldson's automatic system—a suggestion which they promptly acted on, and on my return to Darjeeling the other day, one of the first new things that met my eye on the way from the Railway Station was a Donaldson's eight-seated latrine in the bazar near the goods shed of the railway terminus, and what was more gratifying to me was to see and hear how much it was appreciated by the people. The Conservancy Inspector tells me that it is used by about 1,500 people daily, that it is very easy to keep clean, and that the mehters much prefer it to the old system. This new latrine is admitted by the people, as well as by the municipal authorities, to be a complete success; so much so that I understand it has already been decided to construct all public latrines in future after the same pattern. This is very satisfactory, and the Municipality is to be congratulated on its prompt recognition of a great improvement. It should be always borne in mind in connection with latrines that the more ventilation there is, the better, and that, however well in other respects a latrine may be built, it will always be more or less offensive, in spite of the strictest attention, unless well ventilated. I hope the next latrine that will be attended to is the one in the hollow between Caroline Villa, Stortford House, Warwick House, Hadham Lodge, and Mall Lodge. This is in a most insanitary condition, and is a nuisance to the residents of the locality. If there is no other site to which it can conveniently be removed, it should be reconstructed on the separation system and connected by means of a urine pipe with the nearest urine main. Other latrines that require to be attended to are those attached to the new shops below the Club. These, though called private latrines, are really semi-public, because they are used not only by the residents of the shops, but also by the shop employés, who are for the most part day-labourers. These latrines have insufficient ventilation, are in an insanitary condition, and must be very unpleasant to the shop residents. I do not like the idea of semi-public latrines being here at all, but, on account of the nearest public latrine being as far as the meat market, I suppose we must permit some arrangement of the kind. The present structures should be reconstructed so as to provide more ventilation and better floors. Before leaving the subject of latrines, I wish to draw particular attention to a most offensive private latrine in the Khyah bazar. It belongs to Kally Churn Mistry, and adjoins a public latrine which the Municipality are about to demolish. This private latrine should go too, as it is most objectionable. There will be no hardship to the owner in removing it, as there are public latrines and also a public urinal quite close by.

The urine pipes which are attached to most of the public latrines are an excellent idea of General Yeatman-Biggs', for not only do they dispose of the liquid quickly, but they prevent the possibility of lazy mehters emptying the contents of the drums into the drains, as I am told they used to do very frequently before the existence of the pipes. There is one defect, however, in connection with these pipes, which I should like to bring to notice, and that is that they are not trapped. This should be done, and they should also be ventilated, otherwise the pressure of air in the pipes may unseat the traps, and the air, which is practically sewer gas, would be ejected into the urinals and render them less attractive and possibly harmful. The urine pipes should also be flushed at intervals, and for this purpose small siphon flushing tanks should be provided.

In Darjeeling one always knows when one is approaching a public latrine from the strong smell of phenyle with which it is the custom to disinfect it. I suppose phenyle is used because it is supposed to be a strong germicide. It is a germicide, but not a powerful one, and as it is objectionable in smell, perhaps

the Municipality would like to try some other disinfectant. I recommend the following solution of perchloride of mercury (corrosive sublimate):—

Corrosive sublimate	½	oz.
Hydrochloric acid	1	oz.
Aniline blue	20	grains.
Water	3	gallons.

This is a very powerful germicide, and has the additional advantage over phenyle that it is odourless.

Cess-pools or sullage water-pits.—These exist in several of the houses, and are one of the causes of the unpleasant smells that are frequently complained of. The worst are those at Mount Pleasant, which is occupied by the Bengal Secretariat clerks, and the people who suffer most in consequence of them are those who live near the drain through which the contents of these cess-pools are emptied at intervals. If private drains were properly constructed, there would be no necessity for these insanitary pits. The Bengal Secretariat ones should be closed at once, and the sullage water allowed to pass directly into the drains.

Rubbish and house-refuse.—This is at present stored in square wooden boxes which are attached to each house, and removed daily by the Municipality. The material of which these outdoor bins is made is objectionable, since wood readily absorbs organic impurities and then emits evil odours. A better plan would be to have iron cylinders, or if this is considered too expensive, then circles of corrugated-iron will do as well. The whole of the sweepings and rubbish of the town, as well as the night-soil, is now removed in carts to a place called Battasia near Goom, and buried there in trenches. On account of the distance, this system, which is the only one feasible, takes a long time in transit, and is a great wear and tear on the conservancy ponies and carts. Arrangements have accordingly just been made with the Railway authorities, by which in future all the refuse of Darjeeling will be railed out to Battasia, the Municipality paying the Railway Company a contract rate of Rs. 700 a month, and meeting the cost of the required trucks and of a siding near Goom, which will be necessary. This is a very satisfactory solution of a difficult problem.

Trenching-ground.—It has already been said in the previous paragraph that the night-soil is now trenched at Battasia, and arrangements are being made to cultivate the place. This is as it ought to be, and I see no reason why the Municipality should not make their trenching-ground a source of profit, as well as grow fodder on it to feed the conservancy ponies. The old trenching ground, which is at the head of the now discontinued rubbish shoot at the end of the bazar hill, has, I hear, been regularly cultivated, and is at present covered with a luxuriant crop of vegetables. The Municipality realized Rs. 700 from the trenching-ground last year. Judging by the appearance of the crops I saw growing on it, I should think it ought to realize more.

Quarrying.—A great deal of mischief is caused by indiscriminate quarrying on the hill sides. Apparently anyone can do what he likes in this respect, and the result is hideous and destructive landslips: witness those which occurred in the early part of the year and did so much damage to property, and was also the cause of some lives being lost. The Municipal bye-laws should be very strict in this respect. They are so in other hill stations, and I am surprised that so much latitude is allowed in Darjeeling.

In conclusion, it only remains for me to congratulate the Chairman and the Municipal Commissioners of Darjeeling on their excellent municipal administration of the town, which is on the whole quite the best managed I have come across either in Bengal or in the Punjab. The Municipality is a go ahead one, is fortunate in its constitution of members, all of whom take a real interest in the welfare of the town, and last, but by no means least, it has a good staff. In Mr. Herlihy, the Conservancy Inspector, the Commissioners possess a very energetic and thorough man, who knows the town well, is constantly to be seen on his rounds, and allows no shirking of work on the part of his subordinates, while he is not afraid to do his duty in insisting as far as he can on compliance with conservancy laws and regulations.

H. J. DYSON,
Sanitary Commissioner for Bengal.

DARJEELING,
The 17th September 1896.

WEATHER AND CROP REPORT.

For the week ending the 5th October, 1896.

Burdwan.—Rainfall at Sadar ·02, Kalna 1·00, Katwa ·49, Raniganj ·31. Weather fair and hot. Harvesting of *aus* and jute and sowing of *rabi* going on. Rain badly wanted at Raniganj. *Amán* thriving splendidly. Supply of fodder and water plentiful. Condition of cattle good. Common rice selling as follows:—

	Srs.	
Sadar	11½ to 14	per rupee.
Kalna	12	
Katwa	12 to 13½	
Raniganj	12 to 14	

Midnapore.—Rainfall at Sadar ·08, Contai 1·66, Tamluk ·72, Ghatal ·30. Weather hot. Prospects of sugarcane, *til*, and jute good. *Aman* badly requires more rain everywhere, especially on high lands. Cattle-disease reported from Garbeta and Binpur. Fodder and water sufficient. Common rice selling as follows:—

	Srs.	
Sadar	15	per rupee.
Contai	16	
Tamluk	13	
Ghatal	13½ to 15	

24-Parganas.—Rainfall at Sadar ·39. Weather hot and clear. Prospects of *aman* paddy favourable. Harvesting of jute and *aus* still continues. No cattle-disease. Fodder and water sufficient. Common rice sells as follows—

	Srs.	c.	
Sadar	10 to 13	0	per rupee.
Barasat	9	0	
Basirhat	10	10	
Diamond Harbour	11	6	

Murshidabad.—Rainfall at Sadar 2·34, Kandi ·02, Jangipur ·54. Weather hot. Harvesting of *aus* and sowing of *kalai* going on. Cutting of jute nearly finished. *Aman* and sugarcane doing well. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	11	per rupee.
Kandi	13½	
Jangipur	11½	

Khulna.—Rainfall at Sadar ·32, Bagirhat 1·26, Satkhira ·78. Weather cooler than last week. *Aus* harvest almost over. The crop is about 8 annas. In parts of the district no *aman* paddy has yet been transplanted for want of rain. No cattle-disease. Fodder and water sufficient. Prices of common rice:—

	Srs.	c.	
Khulna	9 to 10	0	per rupee.
Bagirhat	9	13	
Satkhira	9	8	

Dinajpur.—Average rainfall ·75. Nights cool. Prospects of standing crops fair. No report of cattle-disease. Fodder and drinking-water sufficient, Common rice selling from 10 to 12 seers per rupee.

Rangpur.—Average rainfall 1·55. Transplantation of *aman* and washing of jute still going on. Prospects fair. Fodder and water sufficient. Common rice selling from 8 to 11 seers per rupee.

Pabna.—Weather very hot. More rain urgently required. *Amán* crop very poor; winter crops so far promise well provided rain falls. Fodder available. Rice selling at Sirajganj 7 seers and Pabna 9 seers per rupee.

Dacca.—Rainfall 1·59. Weather seasonable. Prospects of standing *aman* crop improving. Fodder available. No cattle-disease. Price of common rice varies from 8 to 9 seers per rupee.

Chittagong.—Rainfall ·38. Weather hot. Transplantation of *aman* finished. Prospects have somewhat improved, but more rain is required. Water and fodder sufficient. Rice sells at 11 seers per rupee.

Patna.—Rain urgently wanted in places for rice crop and for *rabi* preparations. Prices have risen sharply owing to heavy exports up-country

Gaya.—Prospects fair. Rain urgently wanted for paddy on high lands. Common rice sells at 9 seers, against average of 14 seers per rupee.

Champaran.—No rain except ·37 at Bagaha. Winter rice has begun to wither on high lands, but fair elsewhere. Copious rain required in about a week to prevent serious general damage, but considerable irrigation is going on. Export of grain up-country has begun, and prices risen generally. Common rice has risen at Sadar from 14 to 11 seers, against average of 15¾ seers per rupee. Fodder and water sufficient.

Darbhanga.—Rain at Sadar ·17. Rain badly wanted for paddy. Fields being prepared for *rabi*. Prices rising owing to export.

Bhagalpur.—No rain at Sadar. Weather seasonable. Prospects of *aghani* paddy fair, but more rain wanted. Sugarcane and other standing crops doing well. Fodder and water sufficient. Rare cases of cattle-disease in Madhipura. Common rice sells as follows:—

				Srs.	c.	
Sadar	...	...	.....	11	6	per rupee.
Banka	...	...	.....	11	14	
Madhipura	...	...	.....	14	0	
Supaul	...	...	.....	14	0	

Purnea.—No rain. Prospects of *aghani* paddy promising. Standing crops doing well Cattle disease reported from thana Raniganj. Fodder and water sufficient. Common rice sells at 11 seers per rupee.

Cuttack.—Rainfall at Sadar 1·22. Weather very hot. *Laghu* rice ripening. *Beal* rice being reaped. *Sarad* rice still being transplanted. *Rabi* crops being sown. *Laghu* and *sarad* crops are being injured by insects. Condition of cattle generally good. Fodder sufficient. Common rice sells as follows:—

				Srs.	c.	
Cuttack	...	...	...	15	12	per rupee.
Jajpur	...	...	...	17	1	
Kendrapara	...	...	...	18	6	
Banki	...	...	...	22	13	

Hazaribagh.—No rain. Prospects of crops fair. Rice sells from 8 to 11 seers per rupee.

General Summary.—There was general rain in Orissa and over a great part of Bengal during the week. In Bihar no rain fell except a light shower at Darbhanga. The prospects of the winter rice crop continue generally fair, but in Bihar and in Midnapur, Khulna, and Pabna more rain is urgently required, especially for high lands. In Cuttack the winter rice is being injured by insects. Early rice and jute are still being harvested in some districts. Sugarcane is doing well. The preparation of lands for the *rabi* sowings is in progress. No cattle-disease is reported except from two thanas in Midnapore and one thana in Purnea and a few cases in Bhagalpur. Prices continue generally high. In Bihar they are reported to be rising rapidly owing to heavy exports up-country.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 6th October, 1896.

M. FINUCANE,
Offg. Secy. to the Govt. of Bengal.

M. FINUCANE,

Offg. Secretary to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of September 1896.

	Inches.	Date.	Hour.
The mean pressure of the month	29 693		
The average pressure of September from 24 years' registers ...	29·682		
The highest pressure in the month	29 949	29th	10
The lowest pressure in the month	29 499	14th	16
The range of pressure	0·450		
	Hours		
The total number of hours of bright sunshine during the month	106·9		
The maximum possible number of hours of sunshine ...	367·0		
	⊖		
The mean temperature of the month	83·2		
The average temperature of September from 24 years' registers	83·3		
The highest temperature in the month	93 0	10th	
The lowest temperature in the month	74·9	28th	
The range of temperature during the month	18·1		
The mean daily range of temperature	10 5		
The greatest range of temperature in one day	15·2	3rd	
	Per cent.		
The mean humidity of the month	87		
The average humidity of September from 24 years' registers ...	85		
	Inches.		
The mean vapour tension of the month	0·982		
The average vapour tension of September from 9 years' registers	0 987		
The mean cloud proportion of the month	7·50		
The average cloud proportion of September from 19 years' registers	6 95		
	Inches.		
The total rainfall of the month	9 05		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	8 48		
The average fall of September from 48 years' registers ...	10·18		
The greatest fall in 24 hours	1·67	1st & 17th	
	Days.		
The number of rainy days in the month	17		
The average number of rainy days in September from 24 years' registers	21		
	⊖		
The mean maximum equilibrium temperature of solar radiation during the month	144·5		
The mean difference of sun and air temperatures	56·2		
The greatest sun temperature	156·5	10th	
The greatest excess of sun over air temperature	66·0	29th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	7·54		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	2·6		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	5·1	25th	
	Miles.		
The mean movement of the wind per day	71·8		
The greatest movement of the wind in one day	196·0	15th	
The greatest movement of the wind in one hour	12·0	14th, 10 to 11 A.M. and 18th 9 to 10 A.M. and 11 to Noon.	

The number of hours with winds from each of the 8 points—
N. 40, N.E. 27, E. 41, S.E. 83, S. 60, S.W. 175, W. 164, N.W. 43, Calm 87.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about equal; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,

For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 5th October 1896.

Abstract of the Results of the Barometric and Thermometric Observations taken at 10 a.m. at the Meteorological Office, Chowringhee, in the month of September 1896.

	Inches.	Date.
The mean pressure at 10 A.M. during the month	27·748	
	⊖	
The mean temperature at 10 A.M. during the month	86·1	
The highest temperature during the month	95·5	10th.
The lowest temperature during the month	74·0	30th.
The absolute range of temperature during the month	21·5	
The mean daily range of temperature during the month ...	12·6	
The greatest range of temperature in one day during the month ...	17·0	7th.
	%	
The mean 10 A.M. humidity during the month	84	
	Inches.	
The mean 10 A.M. vapour tension during the month	1·050	
The total rainfall of the month	8·28	
The greatest fall in 24 hours	1·39	28th.
	Days.	
The number of rainy days in the month	10

The total fall from 1st January to 3rd October 1896		53·17
The average fall of the corresponding period for 24 years, Surveyor-General's Office		59·46

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph rom observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All th nometers are verified and the readings have been corrected to a standard constructed and verified at th Observatory. They are exposed under a thatched shed open at the sides and are suspended four fee e the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 rly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed i eteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; t, thunder; ≤, lightning.
r. lightning reflection; p, passing temporary showers; ⛆ dew.

AGRICULTURAL AND OTHER IMPROVEMENTS IN GOVERNMENT AND WARDS' ESTATES.

REVENUE DEPARTMENT,—LAND REVENUE.

Darjeeling, the 9th October 1896.

RESOLUTION—No. 895T.R.

READ the following reports and papers—

Report of the Indian Famine Commission, Part II, Chapter IV, Section II, paragraph 13.

Resolution of the Government of India, No. 2—125-134, dated 30th August 188.

Letter from the Government of India, No. 53, dated 8th December 1883.

Resolution of the Government of Bengal, dated 2nd May 1885.

Annual Report of the Director of the Agricultural Department, Bengal, for t year 1885-86.

Reports by the Bengal Agricultural Department on the system of Agriculture and Agricultural Statistics of the Burdwan, Dacca, Cuttack, and Lohardaga districts.

Dr. Voelcker's Report on the Improvement of Indian Agriculture (1893).

Resolutions by the Government of Bengal on the Board's Annual Reports on the Administration of the Land Revenue and of Wards' estates in the Lower Provinces of Bengal for the years 1886-87 to 1895-96.

This Government's letter to the Board of Revenue, No. 850L.R., dated the 15th February 1895.

SIR ALEXANDER MACKENZIE'S attention has recently been drawn to the insufficiency of the efforts made, and the smallness of the amounts expended in attempts, to introduce agricultural and other improvements in some Government estates and nearly all Wards' estates in Bengal, and His Honour now desires to bring the subject prominently to the notice of the Board of Revenue, Commissioners, Collectors, and Managers, who are responsible for the management of these estates.

2. The Government of India, in their Resolution dated the 30th August 1881, directed that one of the objects to be kept in view by Provincial Agricultural Departments was to be the general improvement of Indian Agriculture, with a view to increasing the general food-supply and resources of the country; and the Government of Bengal, in proposing in 1883 the establishment of an Agricultural Department in Bengal, while admitting that in the matter of agricultural research no real step could, at that time, be made in advance by Government in permanently-settled estates managed by their owners, remarked that the case was otherwise in estates the property of Government and of disqualified proprietors. It was added—

"It is no doubt a truism that before improvements can be introduced into any matter, the existing condition of things should be fully and accurately known; and inasmuch as admittedly we have no full and accurate knowledge on the subject of agriculture in Bengal, it may seem premature to endeavour to improve it. To this it may be said that on some points connected with native agriculture, our ignorance is not such as to incapacitate us from rendering useful service. No one more than the Lieutenant-Governor is willing to admit that, looking to the means and appliances at the disposal of the Bengal raiyat, he usually gets as much out of the soil as it is possible for him to get. So far as non-scientific agriculture is concerned, there is probably but little to teach him On the other hand, it must not be forgotten that his knowledge is altogether empirical, the best of its kind perhaps, but easily replaced by a better. Indications are not wanting that the raiyat is ready to assimilate this better knowledge, especially as regards the use of agricultural implements and appliances, new staples, better seed, and improved methods of treating produce, if only these innovations are brought within the range of his scanty means, and recommended by successful practice."

* * * * * *

"There are, scattered throughout Bengal, large and valuable properties owned by the Government; the settlement proceedings which from time to time are undertaken bring others upon our hands; year by year the State takes upon itself the management of estates belonging to minor or other disqualified proprietors. The policy of Government in regard to these estates is in theory an enlightened and progressive policy. It cannot, however, be stated that the practice has always coincided with the theory. Hitherto the charge of these estates has been committed to the care of officers without any training for such duties. The Lieutenant-Governor is ready to admit that these duties have often been performed with success; but he is also constrained to say that instances of failure, through imperfect technical education, have not been wanting. No more important duty can devolve upon the Government than the provision of thoroughly efficient managers for its own khas mahals and for the Wards' estates of which it takes charge. The management of these estates should be a model for the imitation of zamindars throughout the Province."

* * * * * *

"Indeed, every Government or Ward's estate presided over by a manager trained in the manner now to be stated should become itself a nucleus of improved agriculture."

* * * * * * *

"If there be a wide field for improvements in agriculture in Bengal, there is also much scope for better management of property coming under Government control, and more hope of an immediate return to labour bestowed in this direction."

* * * * * * *

"At the present moment it is to be feared that managers of Wards' estates and Government khas mahals too often think that the collection of the demand and reduction of balances is the sole object of their official existence. The Lieutenant-Governor wishes to instil into the minds of all such officers a higher principle of duty, and by practice as well as by precept to teach them that it is as much their business to attend to the welfare of the tenantry entrusted to their charge as it is to collect rents."

3. As regards the management of Wards' estates generally, and the introduction of agricultural improvements in particular, the Famine Commissioners gave expression to their views, in the passage referred to in the preamble, in the following terms:—

"The estates of minors and other legally incompetent persons, which are under the management of the Court of Wards, have been spoken of as affording a proper field for the introduction of agricultural improvements into the country. The principle which should govern the conduct of Government in respect of these estates should be, in our opinion, that the managers it appoints should not make use of their position to carry on merely experimental farming, but should act as an enlightened but prudent landowner would act in respect to his own property, *by utilising the results of science and adopting any well-tested and clearly-demonstrated improvement*, either by works for adding to the permanent value of the estate, or by the adoption of improved methods of farming. When therefore any improvement in the method of cultivating or preparing any staple crop, or of rearing cattle, or in the construction of implements, *has been proved to be successful*, it might without objection be introduced to the people and popularised by means of its adoption on such estates, but it would obviously be unjustifiable to make their owners responsible for the cost and risk of carrying out experiments which the Government would not undertake itself."

The Government of India and the Secretary of State recorded their entire concurrence in the principles enunciated by the Famine Commission, subject to

the caution that "Wards' estates should not be made fields for experiments, or their surplus income applied to any purposes of which the results were uncertain." It thus appears that the Government of India and the Secretary of State gave their sanction to the principle that Managers of Wards' estates should act as an "enlightened and prudent landlord would act in respect of his own property, by utilising the results of science and adopting any well-tested and clearly-demonstrated improvement."

4. Two distinct funds are provided for the management, improvement, and protection of estates under the management of Government. These are—

I.—A fund of 12 per cent. deducted from the collections in the following classes of estates:—

(*a*) Government estates of all descriptions, whether held khas or farmed.

(*b*) Private estates managed direct by Government or let on farming lease.

Of the 12 per cent. set aside under the orders of the Government of India, 1 per cent. is intended to be devoted to purposes of education, which is made over to the Education Department, 1½ per cent. to communications, which is made over to District Boards, and 2 per cent. exclusively to sanitary improvements. The remaining 7½ per cent. is intended for the management proper and miscellaneous improvements in the estates. The rule is that only works of improvement which will benefit the estates, but cannot be expected to yield a direct return to Government as proprietor, should be charged against this fund.

II.—A separate fund, known as the Agricultural Public Works Grant, of which the amount is sanctioned yearly by Government on the estimates of the local officers submitted through the Board of Revenue. This grant is intended for such works as irrigation, drainage, or embankments, necessary for the increase or maintenance of the land revenue from Government or temporarily-settled estates.

The grant under this head, amounting to about Rs. 50,000 per annum, has recently been amalgamated with the 12 per cent. grant under head I.

5. The approved and frequently-enunciated policy of the Governments of India and Bengal in this matter, being as above described, the question may now be considered, what has been done to give effect to it? The Lieutenant-Governor regrets to observe that very little has been or is being done in this direction, especially in Wards' estates. The following statements show the approximate rentals of Government and Wards' estates under the management of Government officers during the past ten years, and the expenditure on agricultural and other improvements:—

Government Estates, including Estates managed for Proprietors.

Financial year.	Total rental (current) in round numbers.	Expenditure on—		Percentage of total expenditure on improvements (columns 3 and 4), on rental (column 2).
		Miscellaneous improvements.	Sanitary improvements.	
1	2	3	4	5
	Rs.	Rs.		
1886-87	28,89,000	58,000		2·01
1887-88	27,96,000	53,000		1·89
1888-89	28,95,000	83,000		2·87
1889-90	27,73,000.	57,000		2 05
1890-91	29,18,000	37,000		1·26
1891-92	32,05,000	1,00,000		3·12
1892-93	33,98,000	79,000	46,000	
		1,25,000		3·67
1893-94	34,09,000	1,17,000	50,000	
		1,67,000		4·89
1894-95	34,84,000	56,000	54,000	
		1,10,000		3·15
1895-96	39,26,000	57,000	54,000	
		† 1,11,000		
Total ...	3,12,93,000	9,01,000		2·87

* The percentages have been calculated on the rental instead of on the collections, because, one year taken with another, the collections are nearly equal to the rental.

† Column 4, Appendix No. VIA. of the Board's Land Revenue Report for 1895-96, includes figures for Agricultural Public Works. The usual grant from Provincial revenues for this class of improvements is Rs. 50,000 per annum. This sum has therefore been deducted from the total of Rs. 1,07,000 shown in column 4 of Appendix VIA. of the Board's Report for the year 1895-96, in order to show the amount expended from the Improvement Fund in that year. For other years the figures given in the Board's Annual Reports are reproduced, as they did not include the expenditure from the Public Works grant.

Estates under the management of the Court of Wards.

Financial year.	Total rental.	Actual expenditure on improvements.	Percentage of expenditure on rental (*i.e.*, of column 3 on column 2).
1	2	3	4
	Rs.	Rs.	
1886-87	1,02,96,559	69,662	0·67
1887-88	1,02,46,459	43,259	0·42
1888-89	1,03,44,555	58,167	0·56
1889-90	1,00,15,159	66,930	0·66
1890-91	98,29,588	58,404	0·59
1891-92	91,53,100	92,864	1·01
1892-93	92,99,637	1,57,782	1 69
1893-94	97,32,203	1,58,406	1·62
1894-95	92,85,008	1,43,208	1·54
1895-96	93,44,103	1,83,880	1·96
Total ...	9,75,46,371	10,32,562	1·05

It thus appears that the total outlay on miscellaneous and sanitary improvements in Government estates during the past five years (from 1891-92 to 1895-96) was Rs. 6,13,000, or 3 6 per cent. of the current demand. This expenditure shows a great improvement on that of previous years, and is in itself sufficiently large in amount. All that is required in respect of these estates is to see that the works on which expenditure is incurred are of a suitable character, and that they are carried out with care and economy.

The expenditure on Wards' estates was only Rs. 10,32,562, or 1·05 per cent. on the total current demand. But it is to be remembered that this expenditure, in some cases, included outlay on construction of embankments, keeping up of water-courses, and similar works of protection which would ordinarily be carried out by every native landlord, and are absolutely necessary in order to prevent deterioration of the estates. Such works cannot properly be called improvements at all, being merely preventives against deterioration. If the expenditure on works for improving the condition of things that existed before the estates came under the management of the Court of Wards, as distinguished from expenditure necessary to prevent deterioration, were alone to be given, Sir Alexander Mackenzie fears the amount would be insignificant.

6. The orders quoted above in paragraph 3 were intended to give an impetus to the introduction of agricultural improvements in Government and Wards' estates, but His Honour fears that they have been often interpreted in the opposite sense; and that they have been appealed to, not as being authority for the introduction of improvements, but as a sufficient reason for refraining from doing or attempting to do anything in the direction contemplated by the Famine Commission. The orders of the Secretary of State were intended to discourage reckless innovation and undertaking of experiments for the mere sake of change, but did not prohibit the "utilisation of the results of science or the adoption of well-tested and clearly-demonstrated improvements." It is difficult to believe that any competent manager who has any real desire to introduce improvements can seriously maintain that he can find nothing in the estates under his charge that admits of improvement in such matters as irrigation, cattle-breeding, supply of good seed, supply of good drinking-water, and in sanitation generally, without at the same time laying himself open to the charge of wasting Wards' or Government funds on risky or useless experiments.

7. The Lieutenant-Governor is aware that some of the Wards' estates under the management of Government officers are encumbered with debt, and in such cases His Honour recognises that it is the primary duty of the manager to pay off such debt before attempting expensive improvements; but there are many

estates in these Provinces which are not in debt, in which, on the contrary, funds are being hoarded to little advantage, but in which little or nothing is being spent on such improvements as an enlightened and prudent landlord ought to and would undertake, and in such cases Sir Alexander Mackenzie apprehends that the failure of managers to propose and carry out works of improvement is due not so much to any difficulty in discovering suitable improvements to suggest as to misunderstanding of their duty, want of energy or unreasoning reluctance to depart from old grooves.

8. As the Government of India has more than once pointed out, enquiry and accurate ascertainment of the existing state of things should precede improvement; but when enquiry has been made by competent scientific experts, the time for action has come, and the results of such enquiry and the recommendations based upon them should not be cavilled at or set aside, without giving them a fair trial, by persons who are neither scientists nor experts. In the Reports referred to in the preamble, the results of elaborate investigations made by trained officers into the existing agricultural conditions in certain districts of Bengal were stated, and certain recommendations were made, but the Lieutenant-Governor understands that no action has been taken on them.

9. His Honour now desires that copies of the Reports noted in the margin be furnished to officers in charge of Government estates, and that the managers of all Wards' estates which are solvent and have a rental of Rs. 25,000 and upwards be directed to purchase copies of them, so that they may make themselves acquainted with the existing system of agriculture and with the suggestions made for the improvement of that system. In Dr. Voelcker's Report, and in the other Reports noted in the margin, will be found many suggestions for action which are beyond the region of experiment or speculation, and which may be acted upon with assured prospect of success.

(1) Dr. J. A. Voelcker's Report on Indian Agriculture (1893).
(2) Report on the Agriculture of the district of Burdwan, by Mr. A. C. Sen.
(3) Report on the Agriculture of the district of Dacca, by Mr. A. C. Sen.
(4) Report on the Agriculture of the district of Lohardaga, by Mr. B. C. Basu.
(5) Report on the Agriculture of the district of Cuttack, by Mr. N. N. Banerjee.
(6) Annual Reports of the Department of Agriculture.

The special attention of managers should be given to the paragraphs of Dr. Voelcker's Report noted below, and the manager of every Government estate and of every solvent Ward's estate should be required to submit annually a scheme for the introduction of such of the suggested improvements as are suited to the particular estate under his charge. These schemes should be examined by the Director of the Agricultural Department in so far as they relate to agricultural improvements, by the Superintendent of the Veterinary Department, in communication with the Department of Agriculture, in so far as they relate to improvement of cattle-breeding, and by the District Engineer or Sanitary Board when they relate to engineering or sanitary works, and after approval by these authorities and sanction by the Board of Revenue, should in future be energetically and carefully carried out. The care and energy and tact displayed by managers in this important part of their duties should form an important factor in judging their efficiency, and no manager should receive promotion or be reappointed to the management of Wards' estates who neglects his duty in this respect.

10. For works of improvement of the kind now indicated, *i. e.*, for agricultural and sanitary improvements, the Lieutenant-Governor directs that at least 3 per cent. of the rental in Government estates be allotted in addition to the annual grant for Agricultural Public Works made from Provincial revenues, and that the expenditure under each of these heads be shown separately in the annual reports. In the case of solvent Wards' estates the same percentage on the rental, or such larger percentage on the surplus that remains after payment of Government revenue, cost of management, &c., as the Board may determine, should be set aside by the Board for similar purposes; and managers should invariably explain, in future annual reports, their failure or neglect to spend on improvements the amounts so allotted.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette*, and that copies of it be forwarded to the Board of Revenue, the Commissioners

of Divisions, the Financial Department of this Government, the District Officers, and to the Director of the Department of Land Records and Agriculture.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,

Offg. Secretary to the Govt. of Bengal,

Paragraphs of Dr. Voelcker's Report referred to in paragraph 9 of the Resolution above.

Paragraphs 38 to 43, as to beneficial effects of planting trees and reservation of tracts for fuel and fodder reserves.

" 56 to 80. Increase of water-supply to dry tracts, and prevention of harm by over-irrigation in wet tracts, increasing manure-supply.

" 89, 94 to 96, on construction of reservoirs for water, and of tanks and wells.

" 100 and 101. Removal of superfluous water, draining of swampy land, and making of irrigation reservoirs.

" 103. Agency by which improvement of agriculture by better supply of irrigation may be effected.

" 104. Making of wells.

" 106. Repair of tanks.

" 107 to 113. Tuccavi advances.

Chapter VII, paragraphs 116 to 155, on manures.

" VIII, " 160 to 198, on importance of wood-supply for fuel and means of creating fuel reserves.

" IX, on increase of fodder-supply.

" X, fodder crops and hedges.

" XI, improvement of breed of cattle.

" XIII, selection of good seed, paragraph 308.
311, introduction of new varieties of seed.
312, " of new crops.
317, improvement of rice cultivation.
318, " of sugarcane cultivation.
319, " of potato cultivation.

Chapter XIV, paragraphs 330 to 336, on advantages of the Behesa mill and of evaporating pans, and extension of sugarcane cultivation.

ADMINISTRATION OF WARDS' AND ATTACHED ESTATES FOR 1895-96.

REVENUE DEPARTMENT.—LAND REVENUE.

Calcutta, the 9th October 1896.

RESOLUTION No. 896T.R.

READ—

Report of the Board of Revenue on the Administration of Wards' and Attached Estates for the year 1895-96.

The Board's Report reached Government with commendable punctuality on the 29th of August, two days before it was due.

The total number of estates of all descriptions under the management of the Board during the year 1895-96 was 140 against 146 in the preceding year; the decrease of 6 was in the number of encumbered estates, that of wards' estates remaining the same. There were 74 wards' estates and 55 encumbered estates so managed; the remaining 11 were trust estates, or estates attached under the Bengal Tenancy Act. Ten wards' and 6 attached and encumbered estates were under management for part of the year only, having been taken in charge or relinquished during the year.

Revenue and cesses due to Government.

2. As desired by Government in the Resolution on the Report for 1894-95 the figures under the heads of rent and cesses due to superior landlords, and the collection and balances of rent and cesses due to the estates, have been shown separately for estates which were under management throughout the year from those which remained in charge for part of the year only. The total amount of revenue and cesses due by all estates to Government was Rs. 50,39,322, of which Rs. 49,97,899 were paid, leaving a balance, (after remissions amounting to Rs. 242,) of Rs. 41,181. The Pachete Estate in Manbhum, which was taken in charge during the year under the Encumbered Estates Act, was responsible for the greater part of the balance, namely, for Rs. 28,108, but this sum has been paid up since the close of the year. Of the seventeen other estates which are in arrears, nine owed very small sums. The causes of default are various; but only one of these estates, Barutter Hingly, was unable to pay from want of funds. There appears to have been no sufficient excuse for the failure of the Managers of the Burdhankotee and Ishan Chandra Rai Wards' estates in Rungpur and of the Satkhira estates in Khulna to pay up their Government revenue in due time, and the Lieutenant-Governor desires that an expression of his dissatisfaction be conveyed to these officers for their neglect in this respect.

Rent and cess due to superior landlords.

3. The current demand of rent and cesses due to superior landlords by estates in charge throughout the year was Rs. 3,41,549, and the arrear demand was Rs. 62,859. The payments under both current and arrear demand amounted to Rs. 3,46,807, leaving, after remissions, a balance of Rs. 54,648, the payments thus being equal to 101·5 per cent. of the current and 85·7 per cent. of the gross demand. Rupees 33,931, or nearly two-thirds of the entire balance, was due by the Satkhira Estate, which defaulted in this respect in the year 1894-95 also, and was unfavourably mentioned in the Resolution on the Report for that year. It is explained that Rs. 10,298 out of the entire balance against the Satkhira Estate were only nominally in arrear, and were due to disputes of account with co-sharers, which have since been finally settled; Rs. 3,244 on account of patni tenures, held in joint tenancy, could not be paid in before the close of the year in consequence of the co-sharers not coming forward to pay their quota until the sale day; Rs. 20,389 could not be paid for want of funds. The general results, except in Satkhira, where, however, some progress was made in clearing up confusion in the accounts, were not unsatisfactory, as the arrears were reduced by Rs. 8,211, and Rs. 1,480 were paid for the ensuing year in advance. The rent and cesses due by estates in charge for only part of the year amounted to Rs. 1,351, of which Rs. 550 were paid.

Rent and cesses due to the estates.

4. The following statement shows the demand, collection and balances of rent and cesses due to all the estates during the last five years:—

YEAR.	DEMAND.			COLLECTIONS.			PERCENTAGE OF—		Remissions.	Balances.
	Arrear.	Current.	Total.	Arrear.	Current.	Total.	Current collections on current demand.	Total collection on current demand.		
1	2	3	4	5	6	7	8	9	10	11
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.			Rs.	Rs.
91-92 ...	77,67,017	91,53,100	1,69,20,117	30,69,365	60,69,371	91,38,736	66·3	99·8	12,12,179	65,69,202
92-93 ...	62,03,663	93,99,637	1,55,03,300	29,04,186	61,98,789	91,00,995	66·6	97·8	3,05,695	60,96,710
93-94 ...	66,78,027	97,32,203	1,64,10,230	29,84,402	64,12,911	93,97,313	65·8	96·5	4,35,740	65,77,177
94-95 ...	65,50,095	92,85,008	1,58,35,103	29,83,014	61,69,326	91,52,340	66·4	96·5	5,67,884	61,13,919
95-96 ...	61,59,879	93,44,103	1,55,03,982	29,16,194	59,93,431	89,09,625	64·1	95·8	5,90,112	60,04,245

The collections of rent and cesses in the year under report were worse than ı any of the preceding four years both in the aggregate and relatively to the emand. The percentage of current collections on the current demand for all states was only 64·1, and for estates in charge throughout the year 64·6, against ıe standard of 90 per cent. fixed by Government. The percentage of total ollections on the current demand was 95·3 for all estates and 96·4 for those states only which were in charge throughout the year. The Orissa Division ras again the only one that worked up to the fixed standard; there the current ollections were 98·5 per cent. of the current demand. The Presidency Division shows the worst results of all, the percentage of current collections on the urrent demand being only 42·1. In the Kasimbazar Estate in this Division ollections reached a percentage of only 26·1, and that estate is principally responsible for poor divisional results; its collections in the previous year also were xtremely poor. The low percentage of collections on the total demand in this state is due to an attempt that was made to settle rents in pargana Sarail by the pplication of soil class rates to survey areas, resulting in large enhancements and iolent disturbance of existing rentals without the consent of the raiyats. The ıtter adopted the tactics usual in such cases They kept away from the Settleıent Officer, and when called upon to pay the rentals settled behind their backs, efused to pay any rent at all. The case affords a strong illustration of the ıtility of settlement proceedings conducted on such principles. The mistakes ıat were made are now being rectified, and revised rents, it is reported, are being ealised. If Sarail is an instance of the evil results of a bad settlement, Kanika ı an equally forcible example of the benefits of a good one. There the rents ere moderately enhanced. The Settlement Officer carried the raiyats with im, and the result has been that the current collections amounted to 98·5 per ent. of the current demand and 98·1 on the total demand. There were ractically no arrears at the close of the year—only Rs. 2,783 out of a total emand of Rs. 1,78,372, and only the trifling sum of Rs. 428 was remitted during ıe year.

The general falling off in collections throughout the provinces as a hole is attributed by the Board to the unfavourable harvests of the year, ıused by the scanty rainfall in many parts of the country. The Lieutenıt-Governor does not think that this explanation, though true so far as goes, covers the whole ground. The gross collections fell short even of ıe current demand, and, as pointed out in previous Resolutions, but for missions arrears would go on increasing. The existence of such a state f things shows a defect in the generally excellent and beneficent adminisation of the Court of Wards, and vigorous measures should be taken to medy it. As the first step in this direction, the heavy arrears which a rge number of estates carry on from year to year should be carefully scrutized, in order to write off all irrecoverable or unjustifiable demands. This a matter to which Government has repeatedly called the attention of all fficers responsible for the management of estates. In the Resolution on the oard's Report for the year 1889-90, it was observed that—

"The Lieutenant-Governor considers that greater energy should be shown in the work of trenching from the accounts, at an early period of the management, demands which cannot e recovered, because they were never vested, or because they are barred by limitation. The

istence of such demands affords the inferior collecting agency an opportunity for embezzle-ent."

So also in the Government Resolution in the Report for the year 890-91:—

"The Lieutenant-Governor can only repeat what has often been previously said that very effort should be made to realize such amounts as are likely to be due and the bad ebts remitted."

And again in the Resolution on the Report for 1892-93:—

"The Officiating Lieutenant-Governor, while agreeing generally with the above remarks, ill thinks that much may be done in the direction of reducing arrear balances, by careful rutiny of them, by striking off such balances as are not recoverable by law, and balances hich, though recoverable by law, the raiyats were never likely to be able to pay."

The Report under consideration shows clearly that these orders have ot been fully carried out. The Kasimbazar Estate, with a current demand of s. 3,79,352, has arrears amounting to Rs. 5,37,894. The Satkhira Estate n the same Division has an arrear demand of 2¾ lakhs, although the current emand is less than a lakh and-a-half. In the Burdwan Division, estate arutter Hingly has an arrear demand of over Rs. 9,000 with a current emand of Rs. 5,877. In the Dacca Division, the Annada Chandra Roy and ishori Mohan Rai estates have each accumulated arrears exceeding twice eir annual rentals. The Shewhar Estate shows an arrear of more than two-old the current demand. In the Tikari Estate, where rent is paid on the haoli system, and should therefore be realised promptly when the crops are arvested, the outstanding arrear is still about 81 per cent. of the current annual emand.

It appears to Sir Alexander Mackenzie that satisfactory relations between andlords and tenants cannot exist where, owing to confusion in the accounts, xcessive and arbitrary demands or other causes, arrears are allowed to go on ccumulating from year to year. Nothing can, in the Lieutenant-Governor's pinion, tend more to discourage habits of thrift, industry, and self-reliance on he part of tenants than the knowledge that it is hopeless for them to expect to ay off the accumulated arrears kept hanging *in terrorem* over them in their land-rds' books. Under such circumstances they not unnaturally shirk payment of hat they admit to be due and are able to pay and would pay if they felt that hereby they would become free from debt. The retention of irrecoverable rrears demoralises the tenant, while the landlord himself receives less than e would if these irrecoverable arrears were once for all struck off. A manager ho shows accumulating arrears in his annual returns is self-condemned. Either he demand is fair and legally recoverable or it is not. If it is fair, a competent anager ought to be able to recover it in full or nearly in full year by year, nd if it is not fair or legally recoverable, his first duty should be to put it on n equitable and satisfactory footing. The Lieutenant-Governor is aware that he Board have repeatedly issued injunctions to managers and local officers to act n these principles; but imbued, as local officers often are, with old traditions of amindari management, it is difficult to get them to obey orders in this matter. A fair example of what these traditions are is furnished by the Paigamberpore state with its arrear of more than four times the current year's rent, the reater part of which, it is observed with satisfaction, has at last been struck off. The statement given in paragraph 9 of the Board's Report shows that the bad and recoverable debts of estates in charge for the entire year, which amounted o Rs. 1,29,381 at the time of taking charge, have risen to Rs. 4,04,405; oubtful and disputed debts have similarly risen from Rs. 48,232 to Rs. 1,48,511. hese figures speak for themselves. The total amount of balances due to all states was Rs. 60,04,245, or over 64 per cent. of the gross current demand. ir Alexander Mackenzie now directs that the manager of every estate in which he arrear is more than 25 per cent. of the current demand be called upon uring the current year to prepare a statement classifying the arrears into—

(*a*) those barred by limitation;
(*b*) those for which the tenants deny liability, which should be sub-divided again into two sub-classes according as the tenants' objections are held to be (1) valid or (2) invalid;

(*c*) amounts admitted and legally recoverable, but impossible of realisation, because of the poverty of the tenants or other adequate cause;

(*d*) amounts which are legally recoverable and which the tenants are at the same time able to pay and ought to be made to pay.

Sums included in (*a*), *b* (2), and (*c*) should be struck off and prompt and effective measures should be taken to recover amounts included in *b* (1) and (*d*).

Where the tenants do not specify the year or kist to which payments are to be credited, they should be credited to arrears till the whole balance is cleared off, and only the surplus should be credited to the current demand; but before this is done, it is absolutely necessary that the manager should fully satisfy himself that the attested arrears are fairly and justly due, and that they are not, as they too frequently are, fictitious and arbitrary. Where tenants are able to pay and refuse to pay rents justly due from them, an example should be made of the more substantial defaulters by selling up their holdings and insisting on possession being given to the purchasers.

Debts due by estates.

5. Debts due by estates which were in charge for the whole year amounted at the commencement of the year to Rs. 28,02,870. Additional liabilities to the extent of Rs. 1,87,929 were ascertained or incurred during the year, the total liabilities of these estates being Rs. 29,90,799. The payments amounted to Rs. 7,23,458, including the repayment to Government by the Deo Estate of a loan of nearly 4½ lakhs. Reductions of debt to the extent of Rs. 35,193 were made by compromise, and the amount outstanding at the end of the year was Rs. 22,32,148. The debts due by estates taken in charge during the year amounted to Rs. 16,47,508, out of which the Pachete Estate in Manbhum is responsible for over 9½ lakhs. Only Rs. 28,491 of these debts were paid during the year.

Management charges and rates.

6. The cost of management, excluding construction and repairs of office buildings, was 7·8 per cent. of the total current demand for rent and cesses, against 7·9 per cent. in the year 1894-95. As in that year, the percentage is highest in Orissa, viz., 15, but no explanation of the highness of the cost of management is furnished. It is probably due to the large commission allowed to sarbarahkars. In the Burdwan Division the percentage was as low as 3·9, as the Burdwan Raj Estate collects most of its large demand under the patni system. There is the less excuse for accumulation of arrears where that system prevails. In the Chota Nagpur Division the cost of management was 8·9 per cent. on the current demand; in all the other Divisions the percentage was above 10. In the Presidency and Patna Divisions, though the collections were bad, the cost of management was 12·7 and 13·9 per cent. respectively.

The amount estimated to be required from all estates on account of the management rate under Act X of 1892 for clerical labour in Government offices and for supervision by superior Government officers was Rs. 1,49,000. The rate fixed for the year was, however, calculated to yield only Rs. 1,45,638, or Rs. 3,362 less than what was required. As there was a surplus of Rs. 1,219 in the accounts of the preceding year, the net deficit would have been Rs. 2,143. The actual deficit was, however, Rs. 5,192, partly on account of increase in the charges in Government offices, and partly because the gross receipts from all estates, which, from the basis on which the rate is assessed, fell short of the estimated collections by over 4 lakhs of rupees. The rules under Act X of 1892 require that the management rate should be realized half-yearly in advance, but the arrear demand at the close of 1894-95 was Rs. 22,378, and at the end of 1895-96, Rs. 33,922. The greater portion of this balance has been recovered since the close of the year. If the rules had been followed, the balance would have been to the credit of the estates, and not against them. It appears doubtful whether the practice of carrying on a running account of the rate from year to year is correct because, when some estates are released and others taken in charge, balances due to the former on account of advance realizations swell the credit of the remaining estates. The Board's attention is requested to this point.

The rate for professional audit of accounts of estates having an annual demand of Rs. 50,000 and over had to be slightly raised during the year

under review, in order to avoid a deficit. The demand on account of this rate for the year was, however, increased by the inclusion of two estates liable to professional audit, which had previously been overlooked. The gross surplus of the year was Rs. 4,689; but there was an opening deficit of Rs. 4,125, so that the net surplus was only Rs. 564. The remarks made above regarding the objection to carrying on surpluses and deficits from year to year apply to this rate also.

Improvements.

7. The following statement shows the expenditure during the last five years on the various descriptions of improvements:—

	Subscriptions and donations to schools.	Subscriptions and donations to dispensaries.	Maintenance in efficient condition of estates, buildings, and other immovable property.	Improvement of land and property and benefit of ward.	Surveys and settlements.	Total.
1	2	3	4	5	6	7
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1895-96	52,306	38,699	4,11,228	1,83,880	1,69,240	8,55,353
1894-95	50,217	38,564	1,68,808	1,43,208	1,64,705	5,65,502
1893-94	59,844	46,527	2,46,225	1,58,406	2,01,899	7,12,901
1892-93	64,059	36,524	2,16,870	1,57,782	97,104	5,72 339
1891-92	61,155	37,598	1,91,397	92,864	2,67,345	6,50,359

The total expenditure on all heads of improvements, inclusive of that on surveys and settlements, shows an increase of Rs. 2,89,851 as compared with the previous year, and is principally due to an increased outlay on buildings and remunerative works. The expenditure under both these heads was larger than in any of the preceding four years, nearly the whole of the increased outlay on buildings being in the construction by the Burdwan estate of new offices for Messrs. Finlay, Muir and Company in Calcutta. This expenditure might more fittingly have been shown in the column relating to the improvement of property. Taking this item into account, the Burdwan Raj Estate appears to have spent by far the largest amount on reproductive works. The Bhawanipur Estate comes next, with an outlay of Rs. 21,974, and the Kasimbazar Estate spent Rs. 20,543 under this head. The nature of the works is not stated, except that it is reported experiments in crops, principally potatoes and sugarcane, were conducted in 12 estates. The Burdwan Raj Estate sets a good example in maintaining a farm, which is supervised by the Department of Land Records and Agriculture. This farm is reported to have done useful work in teaching improved methods to cultivators and in introducing new staples; especially the Naini Tal potato appears to have become popular in the neighbourhood. The Manager who was at first doubtful of the utility of this farm now writes:—

"Whereas generally good potatoes could scarcely be had in the Burdwan market, now good Naini Tal potatoes are actually sent out of Burdwan. The farm has induced raiyats in the neighbourhood to adopt the method of planting sugarcane in trenches and of ratooning sugarcane."

The Lieutenant-Governor is pleased to see that the remarks of Government on the importance of improvements and the Board's endeavours in this direction have had the effect of increasing the amount spent in this manner. But there is clearly room for further advance, and His Honour would have been glad to have been furnished with more precise information regarding the nature of the improvements shown in column 5 of the above statement. Sir Alexander Mackenzie attaches great importance to the introduction of agricultural improvements in Wards' and Government estates, and has separately recorded his views on the subject in a Resolution of this date.

Now that surveys and settlements of the principal estates have been completed, the Lieutenant-Governor hopes that the work of introducing

suitable agricultural and sanitary improvements for the future benefit of th wards and their tenants will be taken seriously in hand, and that funds will nc be allowed to lie idle or be invested in Government paper which might b profitably utilised in lasting improvements on the estates.

Education.

8. The total amount of subscriptions and donations by wards' estates t schools was only Rs. 52,306, or a little more tha one-half per cent. on the annual demand. Gover ment contributes one per cent. of the annual demand on its own estates t education, and there appears to be no sufficient reason why the Court of Ward as a model landlord should not do so likewise.

Surveys and settlements.

9. The survey and settlement of the Talipabad, Kujang and Kanika an Dakhin Shahbazpur Estates were completed durin the year, but final reports of the first three only have been submitted to Government. Exclusive of those estates which come within the scope of the general operations in Orissa, Bihar and Chittagong, 17 estates were under survey and settlement; in 6 of these aggregating 1,107·61 square miles in area, the survey and settlement are under the supervision of the Director of Land Records.

Certificates and Civil Suits.

10. The following statement shows the working of the certificate procedure during the year 1895-96 and the previous four years :—

Divisions.		Number pending from last year.	Number filed during the year.	Total.	Disposed of during the year.	Pending more than six months.	Pending less than six months.	Total.	Amount of demand covered by the certificates.	Total amount realised by certificates.

NOTE.—The difference between the number of certificates pending at the close of 1894-95 and the number shown as pending at the commencement of 1895-96 is due to the exclusion of 839 certificates on account of certain released estates.

The Board observe that "the number of certificates filed has increased, while the demand covered by them has decreased," but the total number of certificates for disposal, including both those filed during the year, and those which remained pending at the close of the previous year, was less than in 1894-95, and this explains the decrease in the total demand covered by the certificates. The average amount covered by each certificate was Rs. 39, as against Rs. 33 in the preceding year. The total amount realized by the certificates was 45·5 per cent. of the demand covered by them. The Board have during the year, with the approval of Government, issued a Circular relaxing previous orders so far as to allow the use of the certificate procedure in any unsurveyed estate in which there is no doubt as to the accuracy of the demand and which the Board may by a formal order declare to be ripe for the purpose. The number of disposals did not keep pace with the number of institutions in the Dacca, Patna and Presidency Divisions. The total number of certificates filed during the year and pending from previous years showed, however, a continuous and satisfactory decrease, being 13,094 at the end of the year under report against 27,003 in 1891-92.

11. The particulars of civil suits for the recovery of rent and cesses are shown in the following statement:—

Divisions.	Number of suits pending last from year.	Number filed during the year.	Total.	Disposed of during the year.	Pending more than six months.	Pending less than six months.	Total.	Amount of demand covered by the suits.	Amount decreed.	Amount recovered.
1	2	3	4	5	6	7	8	9	10	11

Total for .. 1894-95 ..	309	2,564	2,873	2,425	235	213	448	3,04,445	...	...

NOTE.—The difference between the number of civil suits pending at the close of 1894-95 and the number shown as pending at the commencement of 1895-96 is due to the exclusion of 56 suits on account of two released estates and the omission of 9 suits in Saran, in respect of which an explanation has been called for.

There was an increase both in the number and the amount of civil suits. 42·6 per cent. of the demand covered by the suits was realized. The increase in the number of civil suits for rent is no doubt due to the restrictions recently imposed on the issue of certificates.

Certificates were filed and civil suits instituted for an amount equal to only 15 per cent. of the aggregate balances due to all estates.

Estates with a rent-roll exceeding Rs. 50,000.

12. There were 24 estates of this description in the charge of the Court of Wards during the year, of which the principal were the Burdwan Estate with a rent-roll of Rs. 45,91,373 and a charge on account of revenue and cesses due to Government amounting to Rs. 34,76,576; the Tikari Estate with a rent-roll of Rs. 7,15,806 and a Government demand of Rs. 2,54,106; and the Kasimbazar Estate with a rent-roll of Rs. 3,79,352 and a Government demand of Rs. 1,00,612 on account of revenue and cesses. The Burdwan Raj Estate continues to be successfully managed by Raja Banbihari Kapur. It maintains a college and a hospital at Burdwan, a higher class English school and a dispensary at Kalna and two smaller dispensaries at Sujamutha in Midnapore and Kujang in Cuttack. The amount spent on improvements was Rs. 21,494, exclusive of the outlay on building in Calcutta. Although the expenditure on agricultural improvements compares favourably with that of the preceding year, the amount is less than might well have been spent by such a vast and flourishing estate, even if due allowance be made for the fact that the bulk of the property is let out in patni tenures. The management charges in this estate on account of its exceptional conditions were only 3·6 per cent. of the current demand. The balance of rent and cesses due to the Tikari Estate is Rs. 5,07,701 after remitting Rs. 64,433 found to be unrealizable. Of these claims Rs. 3,54,235 are reported to be good and in process of recovery. It is noted that the Manager is engaged in scrutinizing this large balance, and the Lieutenant-Governor hopes that this work will be completed with reasonable expedition, that irrecoverable balances will be struck off and the good and recoverable balances realized. The Tikari Ward's Estate maintains a higher class English school and a charitable dispensary at Tikari. The arrear demand of the Kasimbazar Estate was extremely heavy, being Rs. 5,37,894 against a current demand of Rs. 3,79,352. The management charges were high in both the Tikari and Kasimbazar Estates. The expenditure of the latter estate on schools, dispensaries and improvements shows a satisfactory increase as compared with the preceding year. The rent-roll of the estate was increased during the year by Rs. 6,196 on account of the survey and settlement of the Sarail pargana in Tippera. In paragraph 17 of the Board's report it is stated that the revised rental exceeds the rental before settlement by Rs. 17,236; the apparent discrepancy is not explained, but it is probably due to the fact of the difference having been obtained in previous years. This increase was ultimately accepted by the raiyats, though they had combined for a time to oppose it. Taking the administration of the larger and richer estates collectively, the expenditure on improvements,

especially on drainage, sanitary and irrigation works, is far from adequate, and the Lieutenant-Governor would again invite the attention of the Board to the remarks made on this point in the Resolution on their Report for the preceding year and in the resolution on agricultural and sanitary improvements in Wards and Government estates of this date.

Estates taken in charge and released during the year.

13. Part III of the Board's Report deals with estates taken in charge and released during the year. It appears that five wards' estates and two encumbered estates were taken in charge, and five wards' estates and four encumbered estates were released. These figures do not agree with those given in paragraph 4 of the Board's Report regarding the number of estates of each class under management in the year, as compared with the year 1894-95. With the exception of the Pachete Estate in Manbhum, which was brought under the Chota Nagpur Encumbered Estates Act, VI of 1876, the estates taken in charge or released were of minor importance, and their management shows nothing that calls for special comment. The rent-roll of the Bhagwant Narain Sing Estate in Patna, on the date of assumption of charge, was Rs. 21,390, but had been reduced to Rs. 19,371 at the date of release by the commutation of produce-rents. On the other hand, the rent-roll of the Burway Encumbered Estate in Lohardaga was enhanced from Rs. 7,827 to Rs. 11,288 during the period of Government management The Board describe the principles which have guided them in taking charge of and managing estates in the following passage of their Report:—

"During the past year the Board have been much impressed by the necessity for the exercise on the part of local officers of a sound discretion in recommending that estates should be taken under the charge of the Court of Wards. Though there are many estates to which the Court's management is well adapted, and in which it produces excellent results, there are others in which it is unsuitable and cannot be successful. This is especially the case with small estates, insolvent or bordering on insolvency; here the system is neither cheap enough, nor elastic enough; and occasionally friends who would help a private manager will not come forward to assist the Court of Wards Another class of cases, of which it is often desirable not to assume charge, is those in which the title of the proposed ward is seriously in question; in such cases the family can undertake responsibilities and adopt expedients which the Court cannot. Mr. Stevens has thought that he has best consulted the interests of the wards themselves by refusing to assume charge, or by surrendering it speedily if assumed, in the case of unsuitable properties.

"In the management of wards' estates, the principle which the Board have desired to follow, and have wished their subordinates to follow, is that these are trust estates to be managed for the benefit of the disqualified proprietor, and that the Court may and ought to act as an intelligent and enlightened proprietor himself would act. Wards' estates are not to be made the means of working out theoretical 'fads' (to use a common but expressive word), but improvements are to be undertaken because they are really improvements to the estate, and of advantage to the proprietor and his tenants. For the Court of Wards or its subordinates to go beyond this would, in the opinion of the Board, be to abuse the control which the law has placed in their hands, and would make the department deservedly unpopular."

Sir Alexander Mackenzie fully agrees with these remarks, but thinks it necessary to add that he fears the natural and proper reluctance of the Board to spend money on "fads" is often interpreted by their subordinates as meaning unwillingness to spend money on real and substantial improvements which would be ultimately more beneficial to the proprietors and their successors than the accumulation of hoards which experience shows are only too often wasted when minors come of age for extravagant and useless purposes.

Encumbered estates in Chota Nagpur.

14. The number of these estates was 54 as against 58 in the preceding year. The collection of rent and cesses due to the estates is shown in the following statement:—

District.	Arrear demand.	Current demand.	Collections.	Percentage of collections on current demand.	Remissions.	Balances.	Advance collections on account of the ensuing year.
1	2	3	4	5	6	7	8
	Rs.	Rs.	Rs.		Rs.	Rs.	Rs.
Hazaribagh ...	28,558	1,17,343	1,04,463	89·0	5,524	35,914	32,719
Lohardaga ...	54,670	74,499	80,699	108·3	2,208	46,262	202
Palamau ...	3,670	19,379	16,973	87·5	18	6,058	.....
Manbhum ...	1,21,470	3,01,887	2,08,569	69·8	1,787	2,13,051	.....
Singhbhum ...	1,88,417	86,205	74,716	86·6	26,534	1,73,372	41

The following statement shows the progress made in paying off debts due by the estates :—

District.	Due at the commencement of the year.	Ascertained and incurred during the year.	Total.	Payments.	Reductions by compromise.	Balance due at the close of the year.	Total amount provided in the scheme for payment of debts as shown in the Commissioner's Annual Report
1	2	3	4	5	6	7	8
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Hazaribagh ...	6,36,264	23,347	6,59,611	52,978	31,842	5,74,791	60,942
Lohardaga ...	2,61,806	9,741	2,61,547	28,790	3,108	2,29,649	27,412
Palamau ...	1,07,938	29,709	1,37,647	12,101	.....	1,25,546	16,052
Manbhum ...	1,68,529	10,74,671	12,33,200	33,482	.....	11,99,718	27,485
Singhbhum ...	1,35,602	3,579	1,39,181	29,962	.....	1,09,219	31,296
Total for 1895-96 ...	12,90,139	11,41,047	24,31,186	1,57,313	34,950	22,38,923	1,63,187
Total for 1894-95 ...	11,53,068	3,42,478	14,95,546	1,66,618	39,616	12,89,312	1,63,241

There was a falling off in payments in accordance with the sanctioned scheme, as compared with the preceding year, which is satisfactorily explained by the Commissioner.

15. The Lieutenant-Governor desires to thank the Board for the care and efficiency with which they have supervised the management of estates in their charge. The names of the officers specially mentioned by the Board for efficient management will be communicated to the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,

Offg. Secy. to the Govt. of Bengal.

FLOODS IN THE ORISSA DIVISION.

The 8th October 1896.—The following papers are published for general information.

M. FINUCANE,

Offg. Secy. to the Govt. of Bengal.

No. 17P.T., dated Camp Puri, the 21st September 1896.

From—R. C. DUTT, Esq., C.S., C.I.E., Offg. Commissioner of the Orissa Division,
To—The Secretary to the Government of Bengal, Revenue Department.

WITH reference to your No 3417Agri., dated 27th ultimo, and your telegram of the 5th instant, I have the honour to submit the following consolidated report on the effects of the late heavy floods in this Division, and the measures which have been taken to afford temporary relief, where such relief seemed to be urgently needed.

2. All the rivers of this Division rose after the 20th July last, and reached the maximum height on the 24th and 25th of that month, laying practically the whole country under water. Floods are more frequent in Orissa than in other Divisions, and when they subside within a few days, the damage done is easily repaired.

Floods frequent in Orissa.

The people of Orissa are accustomed to such visitations; they take shelter for the time being in comparatively high lands with their property and cattle, and after the subsidence of the water, they repair or rebuild their huts and transplant new seedlings in places where the crops are destroyed. In some years, however, the floods are so heavy and so prolonged that the country remains under water for weeks together, and the crops are utterly destroyed or very seriously damaged. The present year has been a year of such exceptionally heavy and prolonged floods; the country was under water for nearly a month after the 24th and 25th July, and the loss therefore has been exceptionally severe.

In some years, as in the present, they are exceptionally heavy.

BALASORE.

3. The Subarnarekha floods to the north of this district and the Baiturni to the south, while smaller streams, like the Barabalang and the Salendi, cross it in the middle. The flood in the Subarnarekha river began on the 22nd July, reached its maximum height on the 24th and began to subside slowly after the 25th. The whole country was still under water on the 3rd August last, when the Collector, Mr. De, paid a visit to these parts, and the higher lands did not emerge till about the 11th idem.

Northern parts of Balasore district.

4. On account of its rise on the 24th July, the Subarnarekha breached the Bhagrai embankment, the canal flood embankment, the Jumkunda embankment and the embankment No. 3, with the result that the whole tract from Bhagrai to Mirgoda was under deep water when the flood was at its highest on the 25th. The Executive Engineer also made two cuts in the Bhagrai embankment to drain out the water. The tract of the country known as the Sulsa Pant is specially low, and is thus described by Mr. De after his visit to this place—

"At Madhata the first signs of the flood were visible in the collapsed condition of a number of shops and godowns, which had been built at the foot of the Panchpali embankment. This embankment is the southern boundary of the Sulsa *Pant*, a low-lying tract about nine miles in length and one or one-half mile in width; bounded on the east and west by natural sandy ridges, and on the north and south by the Jamkunda and Panchpali

embankments maintained by the Public Works Department. This tract has formed the subject of a good deal of correspondence lately; surrounded as it is on all sides it is protected from ordinary floods, but as the level of the land in the *pant* is lower than that of the outside, owing to the latter being raised by successive deposits of silt, the question of draining the lower parts of the *pant* has become one of great difficulty."

The huts of the raiyats here had been mostly demolished by the floods, and they were living either in new huts erected on the embankments, or under the thatches of the old huts, the walls of which had disappeared. Small holes had been cut in the thatch to serve the purpose of doors.

5. Less damage had been done to the villages on the chars of the Subarnarekha, as the level of these villages is higher than that of the *Pant*; but nevertheless the crops in the low-lying lands had been submerged. Near the Bhagrai outpost the crops had been utterly destroyed in about sixteen villages, and seriously damaged in some fifty villages. The water of the tanks also had been spoilt by flood-water, and cholera had broken out in some places.

6. Eight villages in pargana Bhelorachaur, sixteen in pargana Jellasore, thirty-five in pargana Nampochaur, and eight villages in pargana Kamarda had lost nearly all the crops at the time of the flood. When the waters had subsided a little, endeavours were made to repair the damages done and to transplant fresh seedlings, when the Subarnarekha rose again in the last week of August. This second flood caused a great deal of damage, sweeping away nearly the whole of the newly-transplanted rice. There is little prospect of any rice crop being obtained from the low land of the parganas of Bhelorachaur, Jellasore, Nampochaur and Kamarda. But the loss is likely to be made good to some extent by the *rabi* crop which is expected.

7. All that it was possible to do appears to have been done to give immediate relief to the people of the affected tracts described in the last three paragraphs. At Bhagrai the head-constable rendered much assistance to the people, by removing them and their cattle to places of safety when the embankments were breached. On receipt of news that there was some difficulty in obtaining supplies of food in these parts, the Collector of Balasore, Mr. De, promptly sent to the spot 50 maunds of rice, 5 maunds of dál and 2 maunds of salt, purchased from the residue of a famine fund which is in his hands. Babu Kailash Chandra Rai Mahashoy, a liberal and respected zamindar, offered to provide all the rice, dál and salt required for distribution to his raiyats in taluk Madhupara, in the Sulsa *pant*; and Seth Karim Chand Premji, a Marwari merchant and contractor of Balasore, sent 20 maunds of rice for distribution to the people in distress. The Collector provided boats where communication was difficult on account of breaches. And after the second flood of the Subarnarekha river had subsided, he allotted Rs. 200 out of the amount placed at his disposal from Babu Ramlall Mukherjee's endowment for small grants, to the poorest raiyats for helping them towards re-building their houses and supporting their families.

8. I have taken every opportunity to instruct the Collector to help the raiyats, as far as possible, to transplant fresh seedlings where the crop on the ground has been destroyed; and indeed the raiyats of those parts, accustomed to such floods, have helped themselves to a great extent in this way, and have transplanted rice a second and a third time after the first plants were destroyed. The flood, however, about the latter end of August has done great injury by destroying the newly-planted rice, and in many of the low tracts of lands affected by the Subarnarekha floods very little rice will be obtained.

9. Instructions have also been given to grant loans under the Agriculturists' Loans Act, and steps are being taken accordingly. And the Collector has also made a list of the tanks, the water of which has been spoilt by the flood-water, and in consultation with the Civil Medical Officer of Balasore has sent a sufficient quantity of permanganate of potash to disinfect the water kept for drinking purposes.

10. To sum up, the loss caused in the northern parts of the district has been severe, and the damages done in low tracts cannot be remedied.

But *rabi* crops are expected to be grown in these parts. In the higher lands new seedlings have been transplanted after the first plants were destroyed or damaged, and unless the late rains fail, some outturn, though considerably below the average, may be expected. Temporary help has been given to the most needy among the raiyats, in rice and pulse, and in money grants for re-building huts, and also in the shape of advances under the Agriculturists' Loans Act. There has been very little loss of life or live-stock, although the damage to crops has been exceptionally severe. I do not expect anything like a scarcity if the rains continue a few weeks longer.

Central parts of Balasore district.

11. The central parts of the district along the Barabalang and Salendi rivers have suffered much less than the northern parts. No detailed report with regard to these places is therefore required Fresh seedlings were transplanted after crops on the ground were damaged, and an outturn, less than the average, may be expected.

Southern parts of Balasore district, Bhadrak subdivision.

12. The southern parts of the district were seriously affected by the floods of the Baiturni river. The Collector went to Chandbally on the 15th August last and made enquiries from the Subdivisional Officer of Bhadrak, the Police Sub-Inspector, the Chakla kanungos and others. He also visited the country along the Coast Canal, the Matai and the Baiturni rivers. He found that the land on both sides of the Matai river, where it joins the Coast Canal, was under water, and the crops were destroyed. About a twelve-anna portion of the paddy crop had been destroyed in the parganas of Aukora, Bhera, Bayang, Kanika, and Kaima. Some lives had also been lost, and 10 or 12 corpses were found in the Matai and the Baiturni rivers. It is, however, not certain whence these dead bodies had been floated down, whether from the district of Cuttack, or from the Tributary State of Keonjhar. There was however no distress or scarcity of food, and the raiyats, except in Aukora and Bhera parganas, did not even want loans. The *bhadoi* crop is estimated at 10 annas.

13. Rai Hari Ballabh Bose, Bahadur, of Cuttack, who has estates in these parts, has come forward and expressed his willingness to stand security for his raiyats to the extent of the loans which may be advanced to them under the Agriculturists' Loans Act. In doing this, the Rai Bahadur has acted with his accustomed liberality, and his action will enable the Collector to effectually help the raiyats. In other instances, where the zamindars have not expressed such willingness, I have instructed the Collector to grant loans on the joint applications of raiyats, according to the Government rules on the subject. On the whole, though the loss in the southern parts of the district has been severe, there is no reason for anxiety, and if the rains continue a few weeks more, a crop, though considerably less than an average one, will be reaped.

CUTTACK.

14. The district of Cuttack has suffered from the floods of the Mahanadi, the Brahmini and the Baiturni, all of which rose simultaneously. The water was highest on the night of the 24th July last, and began to subside very slowly from the following day. It began to rise again a few days later on, and went down again. There were subsequent rises and falls till the latter part of August, and the floods did not finally subside till towards the close of that month.

15. The flood in the Mahanadi river was within a few inches of that in 1892, which is one of the highest on record; while the floods in the Brahmini and Baiturni rivers were higher than was ever known before. But it is rather to the duration than to the height of the floods that the damages in the present year are mainly due. The telegraph masts across the Mahanadi and Kathjuri rivers were swept down, and telegraphic communication was stopped for some days. Letters from Calcutta were also delayed for days, and thus for a time we were practically cut off from the outer world.

Kendrapara subdivision.

16. Kendrapara subdivision, which extends to the east as far as the Bay, has suffered most from these floods. In the Kanika estate they were higher than any previous flood since 1867. The Brahmini and the Baiturni unite and form the Dhamra river, which flows through the estate, and the overflowing of this river has done considerable damage to the estate. In about four-fifths of the estate, the standing crops and the seedlings in seed plots were wholly destroyed, while the loss was partial in the remaining portion. The damage was not less in the Kujang estate belonging to the minor Maharaja of Burdwan. There was a succession of high floods, with the result that the crops and seedlings in low lands were under water for about a month, and were of course utterly destroyed. The crops on the high lands which were not destroyed, bear a very small proportion to those destroyed. In the large and important parganas of Aul and Utikan the damages were not so great. The breach in the embankment of the Patamundi Canal did serious but not extensive damages, as the water passed away sufficiently quickly. Some lands were covered with sand, and altogether a 12-anna of the crops in this subdivision has been destroyed.

Jajpur subdivision.

17. The damages in the Jajpur subdivision were also considerable, and were most serious in those parganas which now form the basin of the Budha, the Kha-suah, the Brahmini and the Birupa rivers. The area of the tract is estimated at 150 square miles. The total loss in the Jajpur subdivision is estimated at an 8-anna portion of the standing crops.

Sadar subdivision.

18. In the Sadar subdivision the protected area was not materially affected by the floods. But in the unprotected areas the damage was very great, and things are much the same as in the Kendrapara subdivision.

19. Writing on the 4th August, Mr. Growse, the Collector of Cuttack, said:—

"Floods are so common in the district that as a rule people are prepared for them, and take steps at the first warning, but in some cases they made difficulties, and delayed in removing their families till the last minute. All over the country there are several families, indeed whole villages, bivouacing out in the open on canal banks and river embankments. This is not, however, unusual in years of high floods. In many cases there must be some difficulty in their getting and cooking food, but on the whole, I have no cause to fear deaths from starvation."

After visiting the interior, including some parts of the Kendrapara subdivision, Mr. Growse reported thus about the middle of August:—

"Generally speaking, however, I think I am safe in saying that, although considerable and unusual damage has been done to houses, a few cattle lost, and, in rare cases, damages done to stocks of grains which were not properly protected, there has been no general or wholesale destruction of houses and cattle, and only a few human lives lost by drowning while crossing flooded rivers in dug-outs."

20. Soon after the high flood of the 24th July, Mr. Growse was compelled to send a supply of *chura* and rice, and straw for bullocks, to some people who were stranded and rendered houseless to the south of the Kathjuri river. Similar relief was sent to two other places in the Sadar subdivision where the people were similarly circumstanced, and needed relief urgently. I have instructed the Collector to meet the expenses out of the sum of Rs. 500 which I placed at his disposal out of the Ramlall Mukherjee Endowment Fund. As a rule, however, such help was not needed; the raiyats relied on their stocks of paddy which had been left uninjured, and also received timely help from zamindars and well-to-do people in the interior. The Sub-Manager of Kujang distributed rice and salt to the great relief of those actually in distress during the high floods. A sum of Rs. 400 has been sanctioned in this estate for gratuitous relief, and a sum of Rs. 20,000 for taccavi advances. The Manager of Kanika has similarly got Rs. 200 for gratuitous relief and Rs. 5,000 for

taccavi advances. Everywhere great endeavours have been made to transplant fresh seedlings after the destruction caused by the floods, and seedlings were brought from long distances for this purpose. If the rains continue to be favourable, I do not apprehend any general scarcity in this district.

PURI.

21. This district is traversed by several branches of the Mahanadi river, of which the Daya, the Bhargovi, and the Kushbhadra are the most important. The district is subject to floods from these rivers in ordinary years, but in the current year the floods have been prolonged and heavy, and have, therefore, caused great damage. There were breaches in the embankments of the Daya and Kushbhadra rivers; the country was flooded, crops were destroyed, and the communication between villages and the nearest roads was cut off. Mr. Bell, the Collector of Puri, and Mr. J. N. Gupta, Joint-Magistrate of Khurda, went out immediately after the first floods, and did all that it was possible to do in establishing communication by boat with inolated villages, and in sending food-supply to places which were entirely cut off.

Khurda subdivision.

22. The Khurda subdivision is roughly divided by the Ganjam Road into two portions, which are entirely distinct in their character. The western portion is high and undulating, with jungles alternating with villages and cultivated low lands. As might be expected the damage done to this portion by the floods is very little, and I am not sure that some of the higher lands have not been benefited by the high floods. The people here, as elsewhere, reaped good harvests during the last two years, and while they have plenty of food-supply in stock, their crops on the field also promise a very good yield.

23. But the portion of the subdivision to the east of the Ganjam Road has fared worse. It is a tract which is subject to annual inundations, especially as it has been decided to abandon the right embankments of the Daya river.

Mr. Bell, writing on the 5th August, said :—

"The embankment on the right bank of the Daya is being gradually abandoned, and during my visit on the 28th and 30th ultimo (July) the flow through the breach at Palaspur was very strong; and both there and lower down, where the embankment has been abandoned, the flood was high and the crops of course covered. The Subdivisional Officer of Khurda has been in this tract. He has enquired carefully into causes of distress, and provided the boats required."

I may add that throughout the time of floods and later, the people here have been well looked after, that large taccavi advances have been made to enable them to transplant fresh seedlings after the standing crops had been destroyed, and I learn from the Subdivisional Officer that much of the lands which were desolated by the floods, are under rice again. If the rains be favourable during the next few weeks, we have no cause for anxiety.

Sadar subdivision.

24. The Sadar subdivision of the Puri district is also divided into two tracts, viz., the western, or the *protected area* between the Daya and the Bhargovi rivers; and the eastern, or *unprotected area*, between the Bhargovi and the sea. The former is called the protected area, because it has been decided to keep up the left embankments of the Daya and the right embankments of the Bhargovi, so as to protect this area from floods. I do not know that this does much good in the long run; the country protected from floods becomes a sort of a hollow in course of years, while the country outside rises with the deposit of silt. And the time eventually comes when the embankments burst or are abandoned, and the low country suffers more than the surrounding higher lands. These are questions, however, which do not admit of detailed treatment in the present report.

25. As a matter of fact, the left embankments of the Daya river burst this year.

Mr. Bell writes:—

"I visited the breach, which is about 200 yards wide, on the 28th ultimo (July), and the water was then rushing through with great force. The flood spreads out over the country, and empties itself eventually into the Chilka Lake."

The Collector satisfied himself, however, that there was no demand for immediate relief in this part of the country.

26. The country to the east of the Bhargovi is the unprotected area of the Sadar subdivision of Puri, and the Kushbhadra river runs through this area. The Kushbhadra had burst its embankments, and the whole country was under water.

Writing on the 5th August, the Collector said:—

"I passed through on the 31st ultimo (July). Bhaichuna and the surrounding villages were entirely cut off from the road, and the flood current was strong. The villagers have no boat, and therefore I persuaded the Zamindar's agent to expend a sum of Rs. 10. With this a boat has been hired for the present, so that the poorest villagers can get off to road for work."

I may add that the Collector subsequently sent his senior Deputy. Collector to visit the worst parts of this unprotected tract; that large taccavi advances have been made to help the raiyats to re-transplant seedlings, and this has been done over a large part of the country in which the crops had been utterly destroyed. I have myself travelled through this part lately, and found the young rice in a promising condition. The Deputy Collector tells me that, if the late rains do not fail, we may get a crop here nearly one-half of the average.

27. To prepare himself for the worst, Mr. Bell obtained a grant of Rs. 1,000 from the District Board of Puri for such immediate relief operations as might be necessary, and also raised about Rs 3,000 by local subscription at a meeting at Puri. I allotted to him Rs. 500 out of the Babu Ramlall Mukherjee's Endowment Fund which was placed in my hands by Government. Fortunately the state of things, as described above, has not required much immediate expenditure. The District Board grant remains untouched, and the small expenditure which has been incurred in the Sadar and Khurda subdivisions, has been met from the other sources.

Conclusion.

28. It will appear from what has been stated above that, although the floods in the current year have been exceptionally heavy and prolonged, and have caused much damage, hardship and suffering to the people of Orissa, there is no cause for anxiety in the future, if the rains do not cease prematurely. The District Officers and the Subdivisional Officers have been watchful and active from the commencement of the floods, and have done all that it was possible to do, both in affording temporary relief in places where it was urgently needed, and also in helping the raiyats to repair the damages done and to transplant fresh seedlings after the floods had subsided. I look upon this as a most efficacious form of rendering help to the raiyats; it is in fact helping them to help themselves; and instead of pauperising them by needless charity, we have assisted them in their endeavours to grow a fresh crop after the first and sometimes the second had been utterly destroyed in many places, and damaged in others. Advances under the Agriculturists' Loans Act have been made on an extensive scale, and much of the land which was desolated by the floods is once more under rice. I therefore share the opinion entertained by all the District Officers, that we need not anticipate anything like scarcity or distress, unless the rains stop untimely and unexpectedly.

29. For the rest we have two special circumstances in our favour. In the first place the raiyats all over Orissa reaped excellent harvests during the last two years, and in spite of unusual heavy exportations during the last cold

season, the stock of rice in the country ought to be richer than in ordinary years. In the second place the railway line is under construction in Orissa, and will give employment to as many thousands of people as will ever be in need of work, even if there be some distress in particular localities. Our anxiety to provide special relief works is greatly relieved when the railway authorities offer fair wages to all who may seek employment. The railway authorities have been trying, not with complete success, to get an adequate number of steady labourers for their earthwork during the last twelve months and more, and they will be glad to give employment to labour on a large scale, if some partial distress in some localities in Orissa brings thousands of willing labourers to their earthworks in the next cold weather.

30. I have submitted separate reports to Government with regard to the damages done by the floods in Angul and the Tributary States of Orissa. It is needless therefore to go into that subject in the present report.

No. 869T.—R., dated Darjeeling, the 6th October 1896.

From—M. FINUCANE, Esq., Offg. Secretary to the Government of Bengal, Revenue Dept.,

To—The Commissioner of the Orissa Division.

IN acknowledging the receipt of your letter No. 17P—T., dated the 21st September 1896, reporting on the effects of the recent floods in the Orissa Division, I am directed to say that the Lieutenant-Governor notices with satisfaction the care and sound judgment with which you and the District Officers of Cuttack, Puri and Balasore met such local and temporary distress as was caused by them.

REPORT ON THE WINTER RICE CROP IN BENGAL, 1896.

THE following is published for general information.

M. FINUCANE,

The 12th October 1896. *Offg. Secy. to the Govt. of Bengal.*

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

First Forecast of the Winter Rice Crop in Bengal, 1896.

1. *Explanatory.*—The first forecast of the winter rice crop is a report on the state of the crop about the middle of September. In many of the districts from which forecasts were received before or about the middle of September, the rice crop was reported to be suffering from want of rain. It was therefore thought necessary to enquire how the crop had been affected by the heavy rain which fell in the third week of September in most parts of Bengal. The result of the enquiry has been incorporated in the district forecasts, the majority of which now furnish information with regard to the state of the winter rice crop as late as the end of the third week of September. The date up to which information has been obtained has been noted below each district in the district forecasts appended to this note.

2. *Character of the season.*—The following is a brief description of the rainfall during the current season:—

The ante-monsoon showers which usually fall in April and May in East, North and Central Bengal, and are necessary to the cultivation of winter rice in lowlying areas, were on the whole favourable this year. The rainfall during these months is not of much importance to the cultivation of the winter rice crop in other parts of Bengal.

The month of June was marked by excessive rain, due to a series of cyclonic storms, in all districts lying to the south of the Ganges, viz., in Orissa; Chota Nagpur, South Bihar and the districts of the Burdwan and Presidency Divisions. The rainfall during June was normal or nearly so in East Bengal and the southern districts of North Bengal, namely, Rajshahi, Pabna, and Bogra; while the remaining districts of North Bengal and the whole of North Bihar received very little.

Throughout July, August, and the first fortnight of September there was an unusually light rainfall insufficient for the requirements of the winter rice crop in most parts of the country, notably in Bihar and North Bengal, and only a few districts in the south of these Provinces received a full share of rain during these months. The rainfall in Orissa during this period was, on the other hand, excessive; and, combined with heavy rain in Central India, led to a series of floods which destroyed the standing crops over a large area.

The great deficiency of rain in July, August, and the early days of September, when heavy rain is needed for the uninterrupted progress of the transplanting operations and for the growth of the young crop, has resulted in a curtailment of the area brought under cultivation, and in great injury to the standing crop in most parts of Bengal. The heavy rain which set in about the middle of September and continued for nearly a week has improved the prospects of the crop to a certain extent, but it came almost too late to cause any material extension of the area transplanted with rice.

The winter rice crop is also reported to have suffered in parts of East Bengal from insufficiency of flood water due to the failure of the rivers to attain their usual level and to inundate the comparatively high-lying lands. In the important rice-producing tract bordering on the Sunderbans in the Khulna district, the crop is reported to have dried up or to have been killed by salt water, which the rainfall of the present year was insufficient to wash down.

It may be further noted that the comparatively favourable forecasts received from several districts in Bihar and Upper Bengal are dependent for realisation on favourable rain in the month of October, which they are by no means certain to receive.

3. *Area cropped.*—The total area cropped with winter rice this year is estimated at 29,597,900 acres against 30,402,500 acres in 1895. The decrease amounts to 804,600 acres, or 2·64 per cent. on the area cropped in 1895. The last year was, it will be remembered, a year of short rainfall which prevented the full area from being brought under cultivation. The shortcomings of the present year will be more apparent by comparing this year's areas with those of 1894, when the full normal area is believed to have been brought under cultivation. The total area cropped with winter rice in 1894 was estimated at 31,416,100 acres, or an excess of 1,800,000 acres over the estimated area for the current year. The decrease in area is almost general over the entire Province, but is most marked in the districts named in the margin, where it amounts to 50,000 acres and upwards. Only a few districts, *e.g.*, Midnapore, Darbhanga, and Palamau, appear to exhibit a considerable increase in this year's area as compared with the area cropped in either of the two preceding years. It is hardly necessary to point out that the present estimates of areas cannot be implicitly relied upon. There can be no doubt, however, that the short rainfall of the present year has prevented a large area from being brought under cultivation.

	Acres.
Burdwan ...	261,000
Birbhum ...	64,000
Hooghly ...	95,000
Murshidabad ..	77,000
Jessore ...	68,000
Dinajpur ...	279,000
Jalpaiguri ...	57,000
Bogra ...	75,000
Mymensingh ...	69,000
Monghyr ...	71,000
Bhagalpur ...	96,000
Purnea ..	163,000
Sonthal Parganas ...	55,000

4. *Estimated outturn.*—It will be seen on reference to the district returns that only one district—Palamau—has returned a bumper or 20-anna crop. The estimate is perhaps too high. The crop is expected to give an average or 16-anna outturn in eight districts,* a 12 to 15-anna crop in seventeen districts,† and an 8 to 12-anna crop in the rest of these Provinces, with the exception of Darjeeling and Saran, where the outturn is estimated at 6½ and 7 annas, respectively.

* Burdwan, Birbhum, Bankura, Midnapore, Bogra, Chittagong, Angul and Khondmals, and Singhbhum

† Hooghly, 24-Pargunas, Rajshahi, Rangpur, Dacca, Backergunge, Tippera, Noakhali, Patna, Gaya, Muzaffarpur, Bhagalpur, Sonthal Pargunas, Balasore, Hazaribagh, Lohardaga and Manbhum.

Taking these Provinces as a whole, the outturn of the present crop may be estimated at between 12 and 13 annas, the same as the estimated yield of the crop of the past year (1895). As noted above, the estimate is dependent on favourable rain being received in October. Should there be no rain between this and the 15th October, the estimated outturn will have to be much reduced, especially in Saran and Champaran.

5. *Areas of short outturn.*—A statement is annexed to this note, showing the districts and subdivisions where the outturn of the winter rice crop is estimated at or below 8 annas: the statement also shows the estimated outturn of the winter rice crop of last year as well as the average estimated outturn of the *bhadoi* food-crops of the current and the previous year. It will be seen that the *bhadoi* food-crops have been very poor in almost every district or subdivision where the winter rice crop has more or less failed through insufficiency of rain or through flood, and that in many of the affected areas, notably in Central Bengal, Shahabad, and Siwan, the winter rice crop of 1895 gave a generally poor outturn.

B. C. BASU,

Assistant Director of Land Records and Agriculture, Bengal.

COUNTERSIGNED.

P. C. LYON,

Offg. Director of Land Records and Agriculture, Bengal.

DARJEELING,

The 4th October 1896.

Preliminary Forecast of the Winter Rice Crop of 1896.

1	2	3	4	5	6	7	8	9	10	11
District, with date of submission of forecast.	Subdivision.	Total area of subdivision in acres.	Total area estimated to be under cultivation, in acres.	Approximate normal area under winter rice in acres.	Approximate area under winter rice last year, in acres.	Estimated area under winter rice this year, in acres.	Taking 16 annas to represent the average outturn, how many annas represented the outturn last year?	Taking 16 annas to represent the average outturn, how many annas will represent this year's outturn?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
							Annas.	Annas.		
Burdwan 22-9-96.	Sadar	794,980	635,500	434,300	217,100	247,900	6	16	Burdwan, Satgachia and Jamalpur thanas have been greatly benefitted by the canal water, but the rest of the Sadar subdivision has suffered from insufficient rain. In Kalna, the rainfall was not altogether seasonable; the full normal area could not, therefore, be cultivated. In Katwa, the deficiency of rainfall during the sowing time prevented more lands being cultivated, but the outturn is expected to be much better than that of last year, if more rain falls later on. Owing to seasonable rainfall, a greater area than last year's has been sown in Raniganj and the outturn is expected to be better. The recent rain since the middle of September has improved the prospects of the crop in the district, and the outturn will not be far below the average.	
	Kalna	276,480	224,000	128,000	96,000	96,000	5			
	Katwa	225,280	169,600	140,800	105,600	123,200	6			
	Raniganj	429,440	254,760	225,300	169,800	220,600	10			
	District Total ...	1,726,060	1,233,800	928,400	587,700	687,100	7	16		
Birbhum 15-9-96.	Sadar	709,120	900,000	413,900	320,800	320,800	12	16	Owing to insufficient rain at the time of transplanting, the normal area could not be cultivated. There has lately been abundant rain; and if the rain continues, there is no reason why an average crop should not be obtained.	
	Rampur Hat ...	412,800		241,800	150,000	220,000	13	16		
	District Total ...	1,121,920	900,000	654,000	510,300	590,000	12½	16		

1	2	3	4	5	6	7	8	9	10	11
District, with date of submission of forecast.	Subdivision.	Total area of subdivision in acres.	Total area estimated to be under cultivation, in acres.	Approximate normal area under winter rice in acres.	Approximate area under winter rice last year, in acres.	Estimated area under winter rice this year, in acres.	Taking 16 annas to represent the average outturn, how many annas represented the outturn last year?	Taking 16 annas to represent the average outturn, how many annas will represent this year's outturn?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
							Annas.	Annas.		
Bankura ... 16-9-96.	Sadar	1,229,440	428,800	364,800	321,700	356,900	10	16	The rainfall of the year throughout the whole district was copious during the sowing season, and in consequence the acreage under winter rice well nigh reached the average. A full average outturn may also be looked for.	
	Vishnupur ...	448,000	214,000	185,600	70,000	180,000	7	16		
	District Total ...	1,677,440	642,800	550,400	391,700	536,900	9⅓	16		
Midnapore 22-9-96.	Sadar	2,120,960	1,229,100	760,000	700,000	758,500	12	16	Owing to seasonable rainfall, the area brought under cultivation this year has been considerably increased, and except in Contai, the outturn is likely to be better for the same reason. In Contai, and in a small area in the Sadar and Ghatal subdivisions, the crops have partially suffered from floods. The shorter outturn in Contai is due principally to less caused by flood. The estimate is too low.	
	Tamluk	390,400	279,600	232,500	179,000	233,500	10	16		
	Contai	543,360	456,300	269,700	304,500	365,300	16	14		
	Ghatal	268,080	146,500	131,800	85,800	131,800	6	16		
	District Total ...	3,322,800	2,111,500	1,501,000	1,329,300	1,495,100	12	15¾		
Hooghly ... 15-9-96.	Sadar	282,360	176,800	141,400	82,900	52,500	16	14	The decrease in the area sown, as well as in the expected outturn in the Sadar subdivision, may be accounted for by the want of timely rainfall which prevented to some extent the transplantation of the seedlings. As regards the other subdivisions, there has been a considerable increase in the area sown this year owing to favourable rainfall, and to the same cause may be attributed the expected increase in the outturn.	
	Serahpore ...	219,520	160,000	100,500	49,000	100,000	10	14		
	Jahanabad ...	258,560	167,700	83,800	75,200	80,000	6	14

24-Parganas 16-9-96.	Sadar	338,700	468,700	308,800	203,000	250,000	10	12	The difference between the normal area and the area sown this year is due partly to want of sufficient rain at the sowing time, and partly to floods in the south. But the subsequent rains did much good to the winter rice crop, and the outturn is expected to be better than that of the last year.

Khulna ... 15-9-96.	Sadar	1,006,336	293,400	228,600	228,600	228,600	10	12	Owing to insufficient rain in August, the paddy sown or planted in the tract of land bordering on the Sundarbans has dried up or been killed by the salt water. Hence though a 13 or 14 anna crop may be expected in the northern part of the district, not even a 4-anna crop can be expected in the south of the district, unless there is heavy rain in the next few days which will allow the land to be replanted.	There was heavy rain in this district after the date on which the forecast was submitted.

Dinajpur... 22-9-96.	Sadar	2,080,640	1,377,600	1,090,400	1,003,400	754,100	20	8	The decrease in the area under winter rice is estimated at a quarter, and is due to the great deficiency of rainfall, which prevented transplantation. More rain is urgently required, which may improve the state of things both as regards area transplanted and outturn.	The forecast was dated 12th September. In reply to an enquiry about the effect of the recent rain, the Collector reported on the 22nd to the effect that the outturn of the transplanted area might be estimated at 12 annas.
	Thakurgaon ...	554,880	367,400	218,100	216,100	190,800	16	12

Rangpur ... 22-9-96.	Sadar	730,240	486,800	365,100	365,100	255,000	16	12	The decrease both in area sown and in the estimated outturn is due to abnormal want of rain from the middle of July to the end of August. Although the recent rain has improved the agricultural prospects, the Collector does not anticipate more than a 12-anna crop. The final outturn will depend on the rainfall during the rest of the season, and on the stock of seedlings available for transplanting.

							Annas.	Annas.		
Saran ... [illegible]-96.	Sadar ...	658,560	561,500	144,000	144,000	144,000	12	8	Owing to absence of rain in July 1896, the transplantation was late. Many of the seedlings have since dried up. The break of rain in August and beginning of September and the prevalance of west winds has injured the crop. If the rain continues at intervals, the outturn estimated may be obtained. The recent rain (since the 15th September) was not sufficient to do permanent good to the crop, and more rain is required.	
	Sirsan ...	[illegible]	460,000	170,000	180,000	170,000	10	6

Champaran 21-9-96.	Sadar	971,520	654,000	229,000	229,000	200,000	15	11	The reduction in area this year is due to want of rain for 4 weeks from July 20th to August 18th, which caused many of the seedlings to wither and curtailed the season for transplantation. The low estimated yield is due to late transplantation and want of rain in the end of August and first half of September. Good rain will still be required to secure even this yield.	
	Bettiah	1,288,320	768,000	448,000	448,000	360,000	16	11

	District Total ..	1,923,200	1,445,000	722,000	722,000	722,000	10½	12		

Darbhang 16-9-96.	Sadar	782,080	594,600	375,000	281,300	300,000	12	12	The figures received from the Police show a reduced area as compared with last year's. I believe this to be incorrect, and have altered the figures. Late rain for transplantation and subsequent drought account for the low outturn. Very good rain is now falling, but much is still required.
	Samastipur ...	488,960	391,000	165,800	125,000	150,000	10	14	
	Madhubani ...	863,360	834,500	651,700	630,000	630,000	12	10	
	District Total ...	2,134,400	1,820,100	1,192,500	1,036,300	1,080,000	11½	11¼	
Monghyr 22-9-96.	Sadar	997,760	698,200	279,000	279,000	209,300	12	10	Owing to want of sufficient and timely rain, the area sown was about ¼th less than that of the last year. The outturn this year will also be low. The recent rainfall has improved the prospects of the crop from 8 to 10 annas in the Sadar and from 9 to 12 annas in the Begusarai subdivision.
	Jamui	1,019,520	515,300	364,300	364,000	363,000	4	12	
	Begusarai	492,160	369,300	14,700	14,700	14,700	12	12	
	District Total ...	**2,509,440**	**1,582,800**	**658,000**	**657,700**	**587,000**	**7¾**	**11¼**	
Bhagalpur 21-9-96.	Sadar	597,760	464,000	250,000	250,000	200,000	12	14	Scanty rainfall accounts for the figures in columns 7 and 8.
	Banka ..	756,480	588,000	527,400	527,400	500,000	11	12	
	Madhipura .	752,640	598,400	318,800	378,800	300,000	12	14	
	Supaul	597,760	447,000	202,000	202,000	202,000	12	14	
	District Total ...	2,704,640	2,097,000	1,298,200	1,298,200	1,202,000	11¾	13⅓	
Purnea .. 22-9-96.	Sadar	1,645,440	790,000	280,000	282,000	200,000	10	8	The decrease in the area sown is due to the fact that transplantation of winter rice seedlings could not be effected on high lands on account of drought. The decrease in the estimated outturn is due to scanty rainfall. The recent rain will not affect the estimate of outturn.
	Kishanganj ...	861,440	530,000	240,000	240,000	240,000	12	10	
	Araria	688,640	410,000	320,000	320,000	240,000	14	10	
	District Total ...	3,195,520	1,730,000	840,000	842,900	680,000	12	9½

Taking 16 annas to represent the average outturn, how many annas represented the outturn last year?	Taking 16 annas to represent the average outturn, how many annas will represent this year's outturn?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
							Annas.	Annas.		
Malda ... 22-9-96.	Whole district ...	1,216,000	811,500	265,000	265,000	260,000	12	10	Owing to the deficiency of rainfall, the area sown this year is less than the normal area and the area sown last year. The outturn is expected to be low for the same reason.	
Sonthal Parganas. 22-9-96.	Dumka	914,560	422,200	181,800	181,800	840,000	12	13	The distribution of rainfall has not been favourable, consequently the area cultivated is less than that of last year. In consequence of the recent rainfall, a larger area has been transplanted, and the prospects of the crop have improved from 9 to 13 annas.	
	Deoghar	510,560	165,100	69,100	65,000		8			
	Godda	618,880	432,900	74,300	40,000		8			
	Jamtara	445,440	124,800	64,000	48,000		10			
	Pakour	437,120	327,000	262,400	262,400		10			
	Rajmahal	473,600	355,200	243,800	243,000		12			
	District Total ...	3,500,160	1,827,200	895,400	840,200	840,000	10	13		
Cuttack ... 16-9-96.	Sadar	901,120	393,100	389,400	341,900	341,900	14	12	Heavy floods in July and August last submerged large cultivated areas, and destroyed the crops, hence the outturn, in spite of every attempt at transplantation, cannot equal that of last year. The floods also have caused a considerable decrease in the area under cultivation, but it is so difficult to estimate the amount of the decrease that the figures in column 7 have been left the same as last year's. If further reliable figures can be obtained, they will be submitted hereafter. The estimated outturn depends on favourable rain during the next six weeks.	
	Jajpur	706,560	390,700	288,000	288,000	288,000	16	8		
	Kendrapara ...	648,200	410,200	327,700	300,000	300,000	16	12		
	Banki ...	74,240	37,200	23,000	23,000	23,000	14	8		
	District Total ...	2,325,120	1,161,200	1,028,100	952,900	952,900	15	10		

Balasore ... 15-9-96.	Sadar	741,120	448,000	409,600	353,100	311,100	16	12	The decrease in area and outturn is due to heavy floods.
	Bhadrak	581,120	389,100	300,800	300,800	300,800	16	2	
	District Total ...	1,322,240	837,100	710,400	653,900	611,900	16	13	
Angul and Khond-mals. 3-9-96.	Whole district ...	1,075,840	346,300	123,600	126,500	126,500	12	16	The rainfall has up to date been favourable to winter rice, which may yield a full harvest if occasional showers be received in October and November.
Puri ... 30-9-96	Sadar	979,200	460,800	323,800	320,000	309,000	14	10	The slight decrease in area in due to the rainfall being somewhat irregular at the sowing time. In a large portion of the district, the lowlying lands were affected by the floods of July and August. Replantation is, however, rapidly going on; and if the weather continues as favourable as it is now, the outturn may be a little more than that estimated. In high lands the state of paddy is good. In Khurda the work of transplantation is going on in parts where the seedlings were washed away by the flood, and the crops in other parts are in a flourishing state owing to the favourable condition of the present weather.
	Khurda	603,520	351,500	180,600	150,600	180,600	16	14

RESOLUTION ON THE ADMINISTRATION REPORT OF THE ORISSA PORTS FOR THE YEAR 1895-96.

No. 1659Marine.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

Dated Calcutta, the 10th October 1896.

RESOLUTION.

READ—

The Administration Report of the Orissa Ports for the year 1895-96.

The following statement shows the receipts of the year, as compared with those of the previous year :—

Particulars.	1894-95.	1895-96.	Increase.	Decrease.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
Port dues on vessels ...	1,675	3,515	1,840	...
Port dues on mail steamers ...	11,626	16,477	4,851	...
Miscellaneous ...	489	170	...	319
Total receipts ...	13,790	20,162*	6,372	...

* NOTE.—Excludes Rs. 12,000 on account of contribution from Government to the Balasore Port Fund.

There was an increase in the receipts from port dues at all the ports. At False Point the increase is attributed to the larger export of rice, consequent on its cheapness in the district during the year, while at Balasore the increase is said to have been caused by the levying of the port dues once in 30 days instead of once in 60 days, as was formerly the practice.

2. The expenditure during the year under review, as compared with that of the year previous, is shown in the table below :—

Particulars.	1894-95.	1895-96.	Increase.	Decrease.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
Establishment ...	10,428	8,978	...	1,450
Light-house establishment ...	3,952	4,274	322	...
Vessels and boats establishment ...	2,762	2,135	...	627
Dockyard services and supplies ...	7,981	7,695	...	286
Miscellaneous	184	791	607	...
Other charges	604	144	...	460
Total charges ...	25,911	24,017	...	1,894

3. As in previous years, the expenditure has exceeded the receipts, but from the figures given above, it will be noticed that while the receipts have increased, the expenditure has been reduced. The largest item of increased expenditure, as compared with that of the previous year, was at False Point,

where, under the head of "Dockyard Services and Supplies," a sum of Rs. 3,738 was expended as compared with Rs. 900 in the previous year. At Balasore under this head there was a large decrease, the expenditure being Rs. 3,957 against Rs. 7,081 in 1894-95. This decrease is attributed to the curtailment of the supply of stores to the Port Fund Department, but it is probably due also in some measure to the amalgamation of the appointments of Port Officer and Customs Officer at Balasore which was effected in November.

4. The following table shows the number and tonnage of vessels that entered and cleared during the year, as compared with those of 1894-95:—

	Year.	Entered.		Cleared.	
		Number.	Tonnage.	Number.	Tonnage.
False Point	1894-95	46	74,220	47	75,694
	1895-96	54	97,459	54	97,459
Balasore	1894-95	312	80,743	325	82,834
	1895-96	373	1,13,012	387	1,12,989
Puri	1894-95	21	26,224	21	26,224
	1895-96	32	42,831	31	40,674

Four hundred and fiftynine vessels in all entered the ports during the year, of which 381 were steamers, and of these all except two were engaged in the coasting trade. Of the 78 sailing vessels, 11 were engaged in foreign and 67 in the coasting trade.

At all the ports there was an increase both in the number and tonnage of vessels which entered and cleared.

5. The following figures show the value of the trade of the ports during the years 1894-95 and 1895-96:—

	Private Trade.		Government Stores.		Total.	
	1894-95.	1895-96.	1894-95.	1895-96.	1894-95.	1895-96.
1	2	3	4	5	6	7
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Exports	55,11,034	90,02,970	7,584	7,252	55,18,618	90,10,252
Imports	62,36,499	62,93,114	2,39,009	2,61,807	64,75,508	65,54,921
Total	1,17,47,533	1,52,96,084	2,46,593	2,69,059	1,19,94,126	1,55,65,173

There was a total increase in the value of both exports and imports. The increase in the exports was due to the expansion of the rice trade. The increase in imports at False Point is said to be due to the introduction of kerosine oil from New York, while at Puri the increase is attributed to the importation of treasure for the purchase of rice.

6. A regular steam service was maintained between Calcutta and Chandballi during the year. Up to the 11th February 1896, five steamers belonging to the India General Steam Navigation Company and to Messrs. Macneill and Company were employed on the run, and after that date another steamer was put on by the former company.

7. Communication between Cuttack, Chandballi and Balasore was kept up throughout the year by the canal steamers of the India General Steam Navigation Company and the Rivers Steam Navigation Company, as in the previous year.

By order of the Lieutenant-Governor of Bengal,

A. D. McARTHUR, *Colonel*, R.E.,
Secretary to the Govt. of Bengal.

LIBERALITY OF RAJA RAM NARAIN SINGH BAHADUR OF KHAIRA, DISTRICT MONGHYR.

No. 910T.M., dated Darjeeling, the 9th October 1896.

From—H. H. RISLEY, Esq., C.I.E., Secy. to the Govt. of Bengal, Municipal Dept.,
To—The Commissioner of the Bhagalpur Division.

I AM directed to acknowledge the receipt of your letter No. 158P.W.—Ct., dated the 24th September 1896, in which you report that Raja Ram Narain Singh Bahadur of Khaira, in the district of Monghyr, made over to the Magistrate of the district a sum of Rs. 15,000 to be applied to public purposes at his discretion.

2. In reply, I am directed to request that you will be so good as to convey to the donor the thanks of His Honour for his liberality and public spirit. This letter will be published in the *Calcutta Gazette*.

MEASURES FOR PREVENTION OF PLAGUE.

MUNICIPAL DEPARTMENT.—MUNICIPAL.

Darjeeling, the 10th October 1896.

RESOLUTION—No. 937T.—M.

Telegram to Chairman, Howrah Municipality, dated 10th October 1896.

In the Government letter No. 770T.—M. of the 30th September, a copy of which is annexed to this Resolution, the Corporation of Calcutta were addressed on the subject of the reported outbreak of plague in Bombay, and it was suggested that the following measures should be taken under sections 321 to 334 of the Calcutta Municipal Act:—

(1) To declare bubonic plague or any form of typhus fever with glandular swellings to be a dangerous disease, regarding any case of which information should at once be communicated to the Commissioners or their Health Officer under section 321.

(2) To select a site for a temporary Plague Hospital away from the main thoroughfares, and to arrange for its prompt erection should the need arise.

(3) To provide special carts for the conveyance of cases to Hospital, and to arrange for the disinfection of both carts and drivers.

(4) To divide the Town into Sanitary Circles of manageable size, and to place in charge of each a Medical Inspector with full powers to carry out the measures ordered by the Commissioners or Government for preventing the spread of the disease.

(5) To draw up Regulations under section 334 of the Act, in order to give effect to such special measures as might be necessary to prevent, check or mitigate an outbreak of plague.

The Corporation were further informed that the Government would be prepared to appoint a Medical Board to assist the Corporation in devising measures to deal with the disease.

2. While trusting that no necessity for the above measures would arise, the Lieutenant-Governor expressed his entire approval of the steps taken under the Commissioners' orders to give special attention to the cleansing and sanitation of Calcutta. A copy of the letter was sent to the Commissioner of Burdwan, who was directed to instruct the Magistrate of Howrah to move the Municipality to take the necessary action to cleanse and sanitate the town.

3. A case of mild bubonic plague is now reported to have occurred in Howrah, the patient being a Eurasian lad of 17, who arrived from Bombay on the 26th September, and is believed (though this is not certain) to have brought the disease with him. It may be hoped that the case is an isolated one, and that no general outbreak of the disease will take place. But the occurrence of even a single case in a crowded area where the sanitary conditions are such as to favour the spread of contagion, if not actually to generate the disease, convinces the Lieutenant-Governor that the time has now come to adopt further preventive measures.

4. It has accordingly been decided to appoint the following gentlemen to form a Medical Board for the purpose of determining the action to be taken by all executive authorities, whether official or municipal, with the object of preventing and checking the plague throughout Bengal:—

Hon'ble H. H. Risley, C.I.E., Secretary to Government, Financial and Municipal Departments	*President.*
Hon'ble P. Playfair, C.I.E.	*Members.*
Hon'ble J. G. H. Glass, C.I.E., Chief Engineer	
Surgeon-Colonel Ross, Inspector-General of Civil Hospitals ...	
Surgeon-Captain Dyson, Sanitary Commissioner	
Dr. Mahendra Lal Sirkar, C.I.E.	
Surgeon-Captain Robson-Scott, Officiating Deputy Sanitary Commissioner, Presidency Circle	*Secretary.*

5. All cases of illness which are believed to be plague should at once be reported to the Board by the Magistrate of the district where they occur, and in Calcutta by the Health Officer of the Corporation. The orders issued by the Board on matters affecting health and conservancy should be deemed to be the orders of Government and carried out with all possible despatch by all executive authorities. Steps will hereafter be taken, if necessary, to legalise all action taken during the present emergency. Nothing should meantime prevent the Board from ordering, or the executive authorities from carrying out, any reasonable measure of precaution, segregation or disinfection which may appear called for.

6. The areas which the Board will have in the first instance to deal with in order to arrest the spread of the plague, are the following:—

(1) The Town of Calcutta.
(2) The Port of Calcutta.
(3) The Municipality of Howrah.
(4) The small Municipalities adjacent to Calcutta and Howrah.
(5) The lines of railway.

7. *The Town of Calcutta.*—The plague has already been declared to be a dangerous disease under section 321 of the Municipal Act, and it is further understood that the measures indicated in the Government letter of 30th September have already been adopted, or are in course of adoption by the Corporation. The Commissioners have asked the Government to select for them a Chief Superintendent to organise and control the conservancy and nuisance branch of the Health Department for three months on a salary of Rs. 1,000 a month. Dr. Banks, Civil Medical Officer of Puri, who possesses in a high degree the requisite qualifications, has been appointed to the post, and directed by telegram to join at once. Sites have been selected in Maniktola for an isolation hospital and a special burning-ghat and burial-ground for plague patients. The Town is being divided by the Health Officer into Sanitary Circles, and Regulations under section 334 of the Act are about to be submitted for the sanction of Government. The Lieutenant-Governor feels sure that the Commissioners, the Executive Officers of the Corporation, and their subordinates will work

cordially with the Medical Board and carry out promptly and fully all the recommendations of that body.

8. *The Municipality of Howrah.*—The Chairman of the Municipality has been instructed by telegram to isolate the patient now suffering from the plague, to destroy his clothes, and to disinfect the house in which he has been living. The Municipality have asked by telegram for the appointment of an officer of the rank of Surgeon-Captain as Health Officer of the town on a salary of Rs. 1,500 a month and carriage allowance; but the Lieutenant-Governor considers that the needs of Howrah can best be met by transferring the present Civil Surgeon, who is in weak health, to a lighter station, and deputing a younger officer, Surjeon-Major Walsh, to carry on the combined duties of Civil Surgeon and of Health Officer with the assistance of an experienced supervisor of the Public Works Department, who will receive Rs. 500 a month with horse allowance and house rent. The Deputy Sanitary Commissioner of the Western Circle was ordered to Howrah to assist in sanitary measures two days before the case of plague was reported to Government.

9. *The adjacent Municipalities.*—The Chairmen of the Municipalities noted in the margin should now report to the Medical Board, through the Magistrate of the district, what steps they propose to take to prevent the plague spreading to their jurisdictions. The Deputy Sanitary Commissioners will be directed to visit these Municipalities as soon as possible, and to explain to the Chairmen personally what ought to be done.

10. *The Port of Calcutta.*—The Government of India have been moved by telegram to sanction the introduction, with such modifications as may be necessary, of the revised rules for quarantine against plague which were introduced in August 1894 for the protection of Calcutta from the importation of plague from Hongkong. It has also been suggested that under section 19 of the Sea Customs Act the export of rags and second-hand clothing from Bombay should be prohibited. Steps are being taken to provide accommodation for plague patients near the quarantine anchorage at Diamond Harbour, and all suspected vessels will be carefully examined and disinfected by the Port Health Officer before communication with the shore is permitted.

11. *The lines of Railway.*—Under section 71 of the Railway Act IX of 1890, a railway administration may refuse to carry persons suffering from any infectious or contagious disease, and under section 117 any such person may be removed by a railway servant from the carriage in which he is travelling. On the 1st October, the Governor of Bombay was asked by telegram whether, in event of the disease increasing, he would be prepared to move the Railway Company to prevent suspected persons from leaving Bombay by rail; and on the next day, His Excellency replied that the Municipal and Railway authorities were in consultation, and that if the disease increased the necessary measures would be taken. The East Indian Railway have already posted native doctors at Asansol, Allahabad and Tundla to scrutinise all passengers, especially those coming from Bombay, while tickets are being checked. The Assistant Superintendent of Emigration at Raniganj and Asansol has been instructed to give all possible assistance to the railway officials in the matter. The Government of the North-Western Provinces and Oudh, and the Administration of the Central Provinces, have also been addressed on the subject.

ORDER—Ordered that copies of the Resolution be forwarded to the members of the Medical Board named in paragraph 4, the Chairman, Calcutta Corporation, the Commissioner of Police, Calcutta, the Bengal Chamber of Commerce, the Trades Association, Calcutta, all Commissioners of Divisions, all Magistrates (direct), and to the Marine Department.

Ordered also—That the Resolution be communicated to the Government of India, Home Department.

Ordered further—That the Resolution be communicated to newspapers and published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Government of Bengal.

No. 770T.—M., dated Darjeeling, the 30th September 1896.

From—H. H. RISLEY, Esq., C.I.E., Secy. to the Govt. of Bengal, Municipal Dept.,
To—The Chairman of the Corporation of the Town of Calcutta.

I AM directed to acknowledge receipt of your letters noted on the margin, regarding the reported outbreak of plague in Bombay, and in reply to forward, for the information of the Commissioners, copies of a telegram despatched by this Government to the Government of Bombay, and of the replies thereto. The telegram of to-day's date from His Excellency the Governor shows that the character of the disease is still open to question; that active measures are being taken by the Bombay Government to deal with it; and that all unnecessary panic or excitement regarding it is much to be deprecated. At the same time it is obviously desirable to take every reasonable precaution to prevent any outbreak of the disease in Calcutta, and to detect at the earliest possible moment any cases that may occur. Under the provisions of section 37 (5) (*h*) of Bengal Act II of 1888, the preventing or checking the spread of dangerous disease is one of the obligatory duties of the Municipality, and sections 321 to 334 of the Act contain the detailed provisions of law on the subject. The Lieutenant-Governor will be quite ready to sanction any measures which the Commissioners may desire to initiate under those sections. To begin with, it appears desirable to declare that bubonic plague or any form of typhus fever with glandular swellings is a dangerous disease, regarding any case of which information shall at once be communicated to the Commissioners or their Health Officer under section 321.

No. 4042, dated the 25th September 1896.
No. 4056, dated the 26th September 1896.

2. The next step is for the Commissioners to select a site for a temporary Plague Hospital away from the main thoroughfares, and to arrange for its prompt erection should the need arise. The Hospital should be built of matting and T-iron or bamboos in blocks to contain 10 patients each. Provisional contracts could no doubt be arranged for the rapid construction of such a building if required.

3. I am to say, with reference to a query irregularly addressed by the Health Officer to Government direct, that the Campbell Hospital cannot be used for the purposes of a Plague Hospital.

4. The Commissioners should, if the disease breaks out, have special carts (drawn by bullocks and specially marked) provided, one at each police-station, for the conveyance of cases to Hospital. Provision for disinfecting both carts and drivers in the vicinity of the Hospital after each journey would be necessary.

5. If the disease appears, the Town will have to be divided into Sanitary Circles of manageable size, and a Medical Inspector placed in charge of each, with full powers to carry out the measures that may be ordered by the Commissioners or Government for preventing the spread of the disease. Action under section 334 of the Act will then be necessary, and the Government will be prepared to appoint a Medical Board to assist the Municipality in devising measures to deal with the outbreak.

6. The Lieutenant-Governor trusts, however, that no necessity for such measures will arise. Meantime he entirely approves of the steps that are being taken under the Commissioners' orders to give special attention to the cleansing and sanitation of the Town. The Municipality of Howrah will be directed to to take similar steps.

7. It is premature at present to propose any interference with, or medical inspection of railway passengers. Orders on the subject of arrivals by sea will be issued by the Marine Department.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE COMMISSIONERS OF CALCUTTA FOR THE YEAR 1895-96.

MUNICIPAL DEPARTMENT.—MUNICIPAL.

Darjeeling, the 10th October 1896.

RESOLUTION No. 927T.M.

READ—

The Administration Report of the Commissioners of Calcutta for the year 1895-96.

Read again—

The Report for the year 1894-95, and the Resolution recorded by Government thereon.

The Report which was due to Government on the 31st July was not received till the 14th September, a delay of six weeks, of which no explanation is given. This omission is the more to be regretted, as the delay in the submission of the Annual Report of the Commissioners has often been commented upon, and was specially noticed in the Resolution on the Report for the previous year. The Lieutenant-Governor is constrained to repeat what was then said that with the means at their disposal the Commissioners ought to be able to submit their Report in proper time, and he trusts that they will endeavour to do so in future.

2. Mr. J. G. Ritchie held the post of Chairman of the Corporation throughout the year, having been confirmed in it on the death of Mr. H. Lee. Since the close of the year he resigned the appointment, and was succeeded by Mr. H. C. Williams, by whom the present Report is submitted. Changes have also taken place in the offices of Vice-Chairman and Engineer. Babu Gopal Lall Mitter, who for many years held the post of Vice-Chairman, retired in January last, and was succeeded in that office by Babu Nilamber Mukerji. Mr. Kimber, who held the post of Engineer to the Corporation since the 1st July 1876, retired in April 1896, and Mr. Hughes, late Chief Engineer, Public Works Department, has been appointed to succeed him. Since the close of the year the Hon'ble Prince Sir Jehan Kadir Mirza Muhammad Wahid Ali Bahadur, K.C.I.E., one of the appointed Commissioners, has died, and the Lieutenant-Governor shares the regret expressed by the Commissioners at the loss of one of their most esteemed colleagues.

3. *Meetings and attendance of Commissioners.*—The total number of meetings of all kinds held by the Commissioners was 215 against 183 in the previous year. This total included 51 general meetings against 27 in the previous year, 53 meetings of the General Committee, 72 of Standing Committees, 13 of Special Committees, and 26 of Sub-Committees. The Lieutenant-Governor is glad to notice an improvement in the attendance of Commissioners at meetings. The number of Commissioners attending more than 50 meetings rose from 17 to 33. The most regular attendants were Babu Radha Churn Pal, 136 meetings; Babu Norendra Nath Sen, 126; Maulvi Badruddin Haider, Khan Bahadur, 118; Babu Priya Nath Mullik, 113; Babu Jadoo Nath Sen, 111; Babu Nolin Behary Sircar, 109; Babu Devapersad Sarvadhikari, 108; Babu Lal Behary Bysack, 100; and Babu Joygobind Law, 100. The average percentage of attendance among the elected Commissioners was 58 against 55 in the previous year, that among appointed Commissioners 43 against 46 last year, the attendance of those representing the Port Commissioners, the Trades Association and the Bengal Chamber of Commerce combined being 43 against 46 in 1894-95.

4. *Proceedings of Commissioners.*—The principal subjects which came before the Commissioners in general meeting were the temporary scheme for connecting

the Suburbs with the Town system of sewers, the disposal of the sewage of Fort William, the establishment of a dhobikhana, the improvement of cow-sheds, and the final settlement of the question of the statutory three lakhs to be expended annually on suburban improvements. Some delay occurred in the adoption of Mr. Baldwin Latham's temporary scheme for dealing with the sewage of the Suburbs, but towards the close of the year the estimates were passed and the works were commenced. Pending their completion, the night-soil of the Suburbs was trenched up to the 1st March 1896, on certain land belonging to the Port Commissioners, and since then at the Bhatchala ground near the Budge-Budge road, a site which was abandoned in July 1895 in consequence of flooding. The disposal of the sewage from the Fort is a question of some moment, owing to the inconvenience and danger to the health of the Town of the existing system of carting the sewage through the streets to the depôts at Sealdah and Hastings, and it is satisfactory to know that the Commissioners have taken the matter into consideration. The suggestion to construct a sewer which will connect the Fort with the Town system of sewage seems to offer the best solution of the difficulty. Besides obviating the necessity of carting the sewage through the streets, this will prevent the discharge of liquid sewage into the Hooghly, a source of pollution of the river which has long been complained of. The scheme for the establishment of a dhobikhana or Public Wash-house, which was initiated by Sir Henry Harrison in 1889, has at length been sanctioned, and the work is said to be progressing. The insanitary condition of many of the cow-sheds in the town has for years past been a source of danger to the public health, and the Lieutenant-Governor trusts that the Sub-Committee appointed to enquire into the subject will lose no time in devising some effective means of dealing with a state of things which has a constant tendency to disseminate epidemic diseases. The question of the adjustment of the three lakhs to be spent annually on the Suburbs has been finally settled, and the following statement shows how the account has been made up from the year of the amalgamation up to the close of the year 1895-96:—

	Rs.	A.	P.	Rs.	A.	P.
During 1889-90—

5. *Loans.*—The loan liability of the Corporation at the commencement of the year was as follows:—

	Rs.	A.	P.
Unpaid balance of 6 per cent. debenture loan of 1866	5,000	0	0
5 per cent. debenture loans	1,44,01,900	0	0
4½ ditto ditto	30,48,300	0	0
	1,74,55,200	0	0
Balance of consolidated loans from Government ...	48,61,793	0	4
Total ...	2,23,16,993	0	4

A new loan of 18 lakhs, bearing interest at 4 per cent. and repayable in 15 years, was raised by the Commissioners during 1895-96 and devoted to the following purposes:—

	Rs.
For Harrison Road	4,50,000
„ drainage (miscellaneous)	4,00,000
„ extension of water-supply	9,00,000
„ town and busti improvement	50,000
Total ...	18,00,000

Rupees 2,60,425-7-8 of the consolidated loans from Government were repaid during the year, leaving a balance of Rs. 2,38,56,567-8-8 as the loan liability of the Corporation at the close of the year. Against this they had in their reserve funds and in the special fund for the repayment of the loan of 1866 a total sum of Rs. 15,61,606-5-4. Since the close of the year the Corporation have, with the sanction of the Government of India, raised a further loan of 20 lakhs bearing interest at 3½ per cent. and repayable after 15 years.

6. *Income and Expenditure.*—The following statement compares the receipts and expenditure of the Municipality for the past two years:—

Receipts.

	1894-95. Rs.	1895-96. Rs.
General rate at 9½ per cent. ...	16,93,235	17,45,295

Road Department	4,36,533	4,28,744
Street watering	90,583	86,874
Gowkhana	2,10,665	1,93,343
Conservancy	1,43,909	1,59,152
Busti cleaning	97,978	98,261
Sewer cleaning and relaying charges ...	71,957	97,553
Hospital and vaccination charges ...	69,908	71,421
Suburban improvements	1,22,170	1,70,228
All other expenditure from the general fund	2,58,257	4,15,759
Sewage rate charges	2,62,439	2,72,309
Water rate charges	10,63,845	11,50,578
Lighting rate charges	4,28,277	4,17,297
Total ...	44,72,936	48,27,159

The total income exceeded that of the previous year by Rs. 1,58,306, the increase being shared by all funds, especially the general fund and the water-rate fund, which showed increases of Rs. 84,335 and Rs. 52,062 respectively. The increase in all the funds is ascribed to enhancement on revaluation and better collections. The total expenditure exceeded that of the previous year by Rs. 3,54,223. The increases were chiefly under office establishment, Rs. 18,559; general office expenditure, Rs. 14,982; Conservancy, Rs. 15,242; Sewer cleaning, Rs. 25,596; Town improvements, Rs. 50,000; Suburban improvements, Rs. 48,058; and working water-works pumping stations, Rs. 68,665. In all cases the excess expenditure has been satisfactorily explained.

7. *Financial position.*—The year opened with a net cash balance after adjustment of Rs. 4,18,315 at credit of the Revenue Funds and a deficit in the Capital Fund. During the year the total receipts of the Revenue Funds, as shown in paragraph 6 above, amounted to Rs. 46,70,783, and the expenditure to Rs. 48,27,159, leaving a net balance of Rs. 1,56,376 to be carried to account; while the receipts of the Capital Funds, including a new loan of Rs. 18,00,000, amounted to Rs. 21,19,530, and the expenditure to Rs. 17,74,868, leaving a net credit balance on the capital account of Rs. 3,44,662. Excluding advances and the value of stores, the net cash balance at credit of the Revenue Funds was Rs. 2,86,819, or Rs. 1,31,496 less than at the close of the previous year.

8. *Assessment and collection of the consolidated rate.*—The revaluation of houses, lands and bustis in the town after the disposal of appeals filed under section 135 of the Calcutta Municipal Act resulted during the year in a net increase of Rs. 2,99,557. The assessed annual valuation of the town on the 31st March 1896 therefore stood at Rs. 2,01,40,565 against Rs. 1,98,41,008, the figure at which it stood on the 31st March 1895. Considerable progress was made in the disposal of objections against enhanced assessments, with the result that out of a total of 1,996 cases, including 1,382 remaining over from the previous year, 1,105 were disposed of, leaving 891 pending at the close of the year.

The current demand of the consolidated rate was Rs. 38,15,233 against Rs. 37,61,513 in the previous year, showing an increase of Rs. 53,720 due to the revision of assessments, but there was an outstanding balance of Rs. 5,88,845 remaining from the previous year, so that the gross demand for the year was Rs. 44,04,078. The gross collections amounted to Rs. 35,85,192, or a percentage of 81·40 on the gross demand, against a percentage of 81·50 in the previous year. The incidence of the consolidated rate per head of the population was Rs. 5-14 against Rs. 5-12-8 in the previous year, and that of the total municipal taxation Rs. 6-15 against Rs. 6-11-6.

9. The following statement shows the progress of demand and collections during the past five years:—

YEARS.	OUTSTANDING BALANCE OF CONSOLIDATED RATE BILLS ON 1ST APRIL.				Total.	Current demand for the year.	Gross demand, including balance.	Gross collection.	Percentage on gross demand.	Arrears, i.e., column 8—column 9.
	Collector.	Joint-Collector.	Warrant Officer.	Assessor.						
1	2	3	4	5	6	7	8	9	10	11
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.		Rs.
1891-92 ...	1,14,649	42,667	1,71,032	65,050	3,93,398	34,04,933	37,98,331	32,16,046	84·67	5,82,285
1892-93 ...	57,701	38,270	2,52,971	73,345	4,21,287	35,44,144	39,65,431	33,12,021	83 52	6,53,410
1893-94 ...	66,175	15,238	2,78,880	99,504	4,59,797	36,80,275	41,40,072	33,97,891	82·07	7,42,181
1894-95 ...	82,745	24 496	3,23,463	75,260	5,06,066	37,71,513	42,67,579	34,79,917	81·50	7,87,662
1895-96 ...	1,08,607	28,475	3,64,255	87,508	5,88,845	38,15,233	44,04,078	35,86,128	81·40	8,17,950

Out of the total arrears shown in column 11, Rs. 2,11,148 were remitted or cancelled during the year, leaving uncollected a sum of Rs. 6,06,802, the bills for which were distributed as follows:—

	Rs.
Collector	84,436
Joint Collector	27,687
Warrant Officer	3,81 568
Assessor	1,13,111
Total ...	6,06,802

Of the total collections made in each department, 85·44 per cent. of the demand were received in the Collector's department, 83·09 per cent. in the Joint-Collector's department and 33·10 per cent. in the Warrant Department, against 85·33, 82·54 and 32·50, the percentages of the previous year. The work of the Collector's department continued to improve, although the amount transferred to the Warrant Department exceeded that of the previous year by Rs. 30,342. The collections amounted to Rs. 27,40,685 against Rs. 26,76,776 in the previous year, and the balance outstanding at the close of the year after adjustments was Rs. 84,436 against Rs. 1,08,607. The work of the Joint-Collector's department also shows some improvement. During the year Rs. 6,25,358 were realised against Rs. 6,09,413 in 1894-95, Rs. 73,939 was transferred to the Warrant Department against Rs. 75,503, and Rs. 27,687 remained outstanding at the close of the year against Rs. 28,476. The general question of the efficacy of the present methods of collecting municipal dues in Calcutta has been raised by the Corporation in a separate letter which is being considered in communication with the Government of India. In that letter the Commissioners show that the outstanding balance of the consolidated rate has risen within the last seven years from Rs. 2,92,198 to Rs. 6,06,024; while the annual reports show that during the last three years the amounts remitted and cancelled have come to Rs. 6,36,330, or an average of Rs. 2,12,077 per annum. A system under which a proportion of the total demand varying from 5·26 to 6·17 has to be remitted as irrecoverable every year, can hardly be supposed to be free from serious defects; and the Commissioners themselves admit that the organization of the Warrant Department "has not been as complete and efficient as it should be." It is understood that a Sub-Committee has been appointed to inquire into this branch of the question, and the Lieutenant-Governor trusts that they will not stop short there, but will seriously consider whether a large proportion of the arrears which have accrued cannot be traced to the practice of deferring the issue of notices of demand until after the close of the quarter on the first day of which the rates became due.

10. *License and Registration Department.*—The following statement compares the gross receipts under the several heads in this department during the past two years:—

	1894-95. Rs.	A.	P.	1895-96. Rs.	A.	P.
I.—Tax on trades and professions ...	3,44,183	14	9	3,45,564	12	2
II.—Tax on carriages and animals ...	1,44,004	4	1	1,44,739	8	7
III.—Cart registration fees ...	72,760	8	0	77,616	8	0
IV.—Fees for the removal of trade refuse	61,351	2	0	64,537	2	0
V.—License fees for cow-sheds, &c. ...	53	0	0	53	8	0
VI.—Registration fees for hackney carriages, &c.	19,382	2	0	19,354	6	0
VII.—Miscellaneous receipts ...	688	14	0	1,031	6	0
VIII.—Fines under section 90 of the Calcutta Municipal Act ...	8,027	11	4	7,283	2	9
XI.—Fines under section 80 of the Calcutta Municipal Act ...	1,043	0	0	1,220	8	0
Total ...	6,51,494	8	2	6,61,400	13	6

There was an increase of Rs. 10,000 in the total receipts to which all heads, except VI and VIII, contributed. The total number of licenses for professions, trades and callings issued during the year was 27,562 against 25,098 in the previous year. The number of licenses issued for carriages was 5,245 against 5,236, and that for animals 6,877 against 6,785. The number of hackney carriages registered was 3,607 against 3,594, the increase being in the number of second class carriages. During the year an attempt was made to bring about an improvement in the style and condition of hackney carriages by offering prizes of different values for the best turn-out in each class, but the competition does not appear to have been very keen, as there were only 16 competitors, all of whom obtained prizes.

11. *Survey.*—The work of the Surveyor's Department is satisfactorily reported on. Fifty-nine surveys were made during the year in connection with proposed improvements and boundary disputes, and about 229 cases of encroachments and demarcation of properties abutting on public grounds, besides 378 miscellaneous cases, were enquired into and reported on.

12. *Market, lighting, printing.*—The total receipts from the Municipal Market during the year amounted to Rs. 1,33,833 against Rs. 1,31,033 in the previous year, and the profit derived by the Commissioners from this source, after paying all expenses, was Rs. 1,13,049 against Rs. 1,11,933 in the previous year. A desirable addition to the market in the shape of a new poultry range, which is estimated to cost Rs. 44,000, is now under construction. The numbers of gas and oil lamps in Calcutta at the close of the year were 6,254 and 2,046, respectively, against 6,079 and 1,953 in the previous year. The actual cost of lighting was Rs. 3,91,460 against Rs. 3,86,159, showing an increase of Rs. 5,301 due to the increased number of lamps. The electric lighting of Harrison Road is stated not to have been a success, and the subject will be re-considered in connexion with the general scheme for lighting Calcutta by electricity. The Printing Department continued to work well, and yielded a net profit to the Corporation of Rs. 4,488.

13. *Litigation.*—The number of fresh civil suits for the recovery of dues in which the Corporation appeared as plaintiff during the year was 80, the total amount involved being Rs. 32,327. They also appeared as plaintiff in 52 cases pending from the previous year. Of the 52 pending cases decrees were obtained in 49 cases, 1 was compromised and 1 was dismissed; the remaining case is expected to be amicably arranged. Of the 80 new suits instituted during the year, 49 were decreed, 5 were compromised, and 26 remained pending at the close of the year. The number of civil suits in which the Corporation appeared as defendant was 4. Of these, 1 was compromised, and the remainder were undisposed of during the year. There

were 15 appeals to the Small Cause Courts under section 137 of the Municipal Act against assessments of houses and lands, with the result that in 6 cases the assessment was reduced by the Court, 3 were arranged out of Court, 1 was withdrawn by the appellant, 4 were dismissed with costs, and 1 remained pending at the close of the year. The number of cases instituted by the Corporation in the Police Court was 19,785 against 16,941 in the previous year, showing an increase of 2,844, which was contributed by all departments, especially the License Department, which showed an increase of 2,227 in the number of cases instituted by it over the number of the previous year. Of the total number of cases instituted, 10,064 were successful, 796 were unsuccessful, 5,328 were withdrawn or struck off, and 3,597 remained pending at the close of the year. The cost of litigation undertaken by the Corporation during the year amounted to Rs. 22,413 against Rs. 33,203 in the previous year.

14. *Education.*—A sum of Rs. 3,250 was spent by the Commissioners in aid of primary education during the year, the money being distributed among 63 schools in several wards of the town. In view of the large expenditure which the Commissioners will now be required to incur for the improvement of the sanitary condition of Calcutta, the Lieutenant-Governor does not desire at present to press them to make any substantial addition to their contribution to the cost of primary education.

15. *Town and busti improvement.*—The total amount expended on town and busti improvements during the year was Rs. 74,084 against Rs. 76,138, Rs. 92,102, and Rs. 1,41,730 in the three preceding years. The Capital Fund from which this expenditure is met opened the year with a balance in hand of Rs. 12,139. The receipts during the year amounted to Rs. 1,03,589, and the balance at the close of the year was Rs. 41,663. Of the total amount expended Rs. 53,041 represents expenditure on town improvements which consisted chiefly in the widening of Council House Street and Dalhousie Square, south, and opening several new roads, and Rs. 21,043, expenditure on busti improvements, such as the construction of roads and sewers, construction of bathing platforms, tank filling, &c. Rupees 15,441 was spent in the improvement of the bustis in Hastings. Towards the close of the year a destructive fire broke out at Kidderpore, which reduced some 11 blocks of bustis to ashes. In reconstructing these the opportunity has been taken by the Commissioners to remodel the bustis and introduce sanitary improvements, and they have sanctioned an expenditure of Rs. 10,000 from the municipal fund for filling hollows and cutting drains.

16. *Engineer's Department.*—The supply of filtered water was increased by 585,683 gallons a day, and that of unfiltered by 885,201 gallons. About three and a half miles of pipe were added to the distribution system for filtered water, making the entire length of water main 310½ miles. The number of premises connected was 26,312. The average daily supply of filtered water was 20,284,181 gallons, giving a daily consumption per head of the population of 50·09 gallons for the Town proper and 20·11 gallons for the added area. The length of the unfiltered water mains was increased by one and a half miles, and the total length of these mains is now a little over 75 miles, with which are connected 1,216 premises, 151 public conveniences, 86 bathing platforms, 289 sewer flushing chambers, and 2,911 ground hydrants for road watering and sewer flushing purposes. The daily supply of unfiltered water was 5,692,151 gallons, giving a daily consumption per head of 13·43 gallons.

17. *Health Department.*—The number of births recorded during the year 1895 was 10,945, which is the lowest on record since 1889. The ratio per mille of population was 16·0 against 16·8 in 1894 and 18·4, the average of the previous five years. The number of deaths on the other hand rose from 22,441 in 1894 to 27,031 in 1895, and was the highest on record since 1889. The ratio of deaths was 39·6 against 32·9 in 1894 and 29·82, the average of the quinquennium 1889 to 1893. The increase in the mortality is said to be due to an exceptional rise in fevers and small-pox and an increase of cholera and bowel-complaints. Of the total number of deaths recorded 11,345 were from fevers against 8,963 in 1894, 2,099 from cholera against 1,955, 2,220 from small-pox against 405, 3,269 from dysentery and diarrhœa against 3,136, and 8,098 from all other causes against 8,242. The

Health Officer ascribes the high rate of mortality from fevers in the town proper to the defective condition of the sewerage system, and in the suburban area to the naturally waterlogged condition of the soil, which is rendered worse by the existence of numerous tanks and dhobas, the waste of water consequent on the introduction of the water-supply, and the want of drainage, all of which causes indicate the direction in which remedial measures are required. Of the 2,099 deaths from cholera 1,302 occurred in the town proper and 797 in the suburbs. The mortality was highest in March and April, in which months the numbers of deaths were 326 and 394 respectively.

Every precaution was taken to prevent the use of water found to contain *coma bacilli* and to check the spread of the disease in infected localities. Monsieur Haffkine's method of inoculation as a prophylactic against cholera was carried on during the year, and 2,038 operations were performed. In a note appended to the health report for the year, Dr. Simpson examines the evidence as to the efficacy of this process, and expresses his opinion that "by precise observations it has been proved that the anti-choleraic inoculations reduce the mortality in the first four days by an average of 3·24 times, and that the people inoculated after this period acquire a protection which for a year at least renders them 22·62 times safer than the uninoculated." There was a severe epidemic of small-pox in Calcutta during the year under report. The disease which had taken its rise at the latter end of 1894 continued to rage till it reached its climax in March and April 1895, the numbers of deaths in these months being 770 and 564, respectively. Of the 2,220 deaths recorded 420 were reported as inoculated, 501 as vaccinated, 3 as previously having had small-pox, and 1,217 as unprotected. During the epidemic additional medical aid was employed by the Corporation and all necessary measures were adopted to arrest the progress of the disease. Vaccination was vigorously pushed on in infected localities, and houses in which cases of small-pox had occurred were promptly disinfected, the bedding and clothes of patients being destroyed. The number of persons vaccinated during the year was 54,982 against 17,335 in 1894, 88·88 per cent. of the primary vaccination cases proving successful. The mortality from dysentery and diarrhœa was higher than that of any year since 1889, but no explanation is given of the supposed causes.

18. *Drainage.*—The important question of the drainage of Calcutta and the Suburbs has only within the last few months passed out of the stage of preliminary discussion between the Corporation and the engineering experts whom they have consulted from time to time. For this reason, although the subject has been discussed in the newspapers and incidentally referred to in the administration reports of the Commissioners for the last five years, no continuous history of the various phases of the discussion, and no final expression of the views of the Corporation as a whole, has yet been laid before Government. Had such a record of facts and opinions been before Sir Charles Elliott, when he recorded his Resolution of the 8th November 1895, it seems to the present Lieutenant-Governor to be doubtful whether the general condemnation of the supposed inaction of the Commissioners in respect of the drainage question, which is contained in the first paragraph of the Resolution, would not have been qualified by some reference to the intrinsic difficulty of the problem, and the conflicting opinions expressed by the technical advisers of the Corporation. The Report on the Calcutta Drainage Works, by Messrs. Hughes and Kimber, makes it clear that the drainage question, in its present form, dates from October 1890, when Mr. Baldwin Latham, a Sanitary Engineer of high reputation in England, was invited to inspect and report on the drainage of Calcutta. He arrived in Calcutta on the 11th February 1891, and left on the 3rd March, after submitting a report in which he made certain proposals the cost of carrying out which was estimated by Mr. Kimber at Rs. 1,70,69,000. From that time till the present, Mr. Latham's suggestions, as further developed by himself in 1891 and 1895, and supplemented by Mr. Hughes's report on the Suburbs in September 1894, have been under examination and the Corporation now have before them what may be taken to be the final conclusions of their professional advisers. In their joint report on the drainage question, Messrs. Hughes and Kimber, after full consideration, and with a knowledge of the facts necessarily much more

minute than Mr. Latham could have acquired during his brief visit to Calcutta, reject, as based upon incomplete or erroneous data, the main feature of his scheme, and conclude that it is impossible to construct an open low-level reservoir for the discharge, by gravitation, of the combined sewage and rainfall of Calcutta. In the Lieutenant-Governor's opinion this fact, taken with the reduction of the estimate made by Mr. Kimber from 170 lakhs to less than 79 lakhs, is, in itself, sufficient to show that, so far as the drainage question is concerned, neither the Corporation nor their Chairman can fairly be charged with unreasonable delay in arriving at a decision on an engineering problem of exceptional difficulty. Had they accepted and proceeded to carry out Mr. Baldwin Latham's scheme, with no more deliberation than was enjoined on them by irresponsible opinion in Calcutta, they would have committed themselves to a project which would have cost more than double of that now put before them, and which might not in certain essential features have fully met the circumstances of the case. It may be added that many of the attacks which have been made on the supposed dilatoriness of the Commissioners in this matter, owe their origin to the widespread belief in Mr. Baldwin Latham's statement that—

"Sewers like the Calcutta sewers, that are likely to be gorged with mixed sewage and rainfall, must let the sewage out into the sub-soil, which becomes a reservoir for its reception when the flow increases in the sewers. This constant interchange of sewage, rainfall, sub-soil water, and tidal water between the sewers and the ground is, in by judgment, extremely prejudicial to the health of Calcutta, and energetic means should be at once taken to remedy this evil."

The accuracy of this opinion has all along been disputed by Mr. Kimber, who replied to it, in 1891, that he had stripped sewers of all sizes in Calcutta, and had never found any indication whatever of the penetration of sewage into the adjacent soil. Messrs. Hughes and Kimber at present find no reason whatever to accept Mr. Latham's statement, that the interchange of sewage and ground water takes place on a scale which can he measured at the outfall, and they say that this statement is based on incorrect data supplied to him in Calcutta. If their conclusion is correct, it bears out the opinion expressed in paragraph 17 of the Government Resolution on the report for 1894-95, that the hypothesis that leakage from the sewers is the cause of the increased death-rate from fevers does not seem to have been established.

The project drawn up by Messrs. Hughes and Kimber has not yet been submitted for the sanction of Government under section 71 of the Act; but the Lieutenant-Governor understands that the Commissioners approve of it generally and are anxious to commence work as soon as possible. During the five years over which the discussion of the general drainage question has extended, the Commissioners have undertaken several works urgently required in connexion with the drainage of the area added to Calcutta in 1889, which admitted of being carried out independently of the main scheme, and were, it is understood, designed so as to form part of it. Of these works, which cost altogether nearly four lakhs, the most important were the temporary project for draining the Suburbs, the drainage of the Entally block, the sluices at Chetla, Garden Reach and Chowlputty, and several large sewers.

19. The Health Officer again draws attention to the urgent need there is for suitable building regulations for Calcutta in the following remarks which are taken from paragraph 7 of his report:—

"The pressing necessity of proper building laws for Calcutta has not been referred to in the body of this report, much of my last annual report amounting to 22 pages being taken up with this subject. The omission is not because the framing and carrying out of these laws is less urgent this year than last year, but because there is nothing more to say on the subject. In previous reports beginning with that of 1886, I have, in a most prominent manner, drawn attention to the irreparable injury which is being done to the public health of Calcutta by the continuous growth of the city without the control of laws and bye-laws to effectively regulate the building of healthy houses and the formation of healthy streets. The present laws and bye-laws only accentuate the evil, and I do not think Calcutta could be worse off if there were no regulations. It is impossible for a city to grow up in a healthy state in a haphazard manner such as is permitted in Calcutta, where areas have sprung up and are springing up all over the town in defiance of every canon of sanitary law. If 10 years ago the law had been amended on sound principles, Calcutta would have been a

very different place from what it is now; for, notwithstanding the improvements which have been effected by the construction of Harrison Road at a great cost, I have no hesitation in saying that, as regards crowding and unhealthy areas generally, the town is in a worse condition in 1896 than it was in 1886, and must continue to retrograde in this respect until active and effective measures are taken to prevent the creation and perpetuation of insanitary localities. Time without the application of a remedy merely increases the evil, and the only possible way to stop this retrogression is the adoption and enforcement of a Building Act based on the lines found necessary in other large metropolitan towns inhabited by civilised communities. It is idle to imagine that a city will grow up without laws regulating its growth. If a town has its breathing space contracted more and more as years go on, and if by absence of controlling laws the development of abnormal growths renders it an impossibility for its waste products to be carried away efficiently by sewerage and scavenging, the result must be a decline in health.

"There are difficulties no doubt in the way of framing suitable laws, and I would repeat the advice I gave last year that, before a Building Act is passed, a searching and preliminary enquiry should be made as to laws on which such an Act should be framed, which, while securing a healthy city, shall be in conformity with the customs of the people and with tropical requirements. This seems to me to be a subject for the Government to enquire into, aided perhaps by a few Commissioners. I laid down in my last Annual Report certain principles for guidance which would no doubt be helpful to a Commission such as that which I suggest."

These remarks, and the observations recorded by Sir Charles Elliott in paragraph 19 of the Resolution on last year's report, deserve, more especially at the present time, the most serious consideration on the part of the Commissioners. The extracts from Dr. James's report on the outbreak of plague at Hongkong in 1894, which are annexed to this Resolution, bring out very clearly the intimate connexion which exists between crowded and insanitary buildings and the growth and dissemination of the germs of deadly epidemics. If after considering the subject, which has now been before them for several years, the Commissioners come to the conclusion that a special Building Act for Calcutta is called for in the interests of the health of the town, the Lieutenant-Governor will be prepared during the cold weather to appoint a representative Commission to formulate the principles upon which such an Act should be based.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Govt. of Bengal.

Extracts from a report on the epidemic of Bubonic Plague, which occurred in Hong-Kong in the months of May, June and July, 1894, by SURGEON-MAJOR H. E. R. JAMES, F.R.C.S., *Army Medical Staff.*

THE plague now under consideration is undoubtedly the Bubonic Plague of history; and such deviations from type and modifications as have occurred in it are probably racial and climatic.

It seems to have certain favourite visiting places, and to have almost invariably recurred in every place which it has once visited.

Certain peculiarities of meteorological conditions have generally preceded outbreaks, and epizootic diseases of (generally) domestic animals have often been previous to, or coincident with, the epidemic.

The prolonged drought had reduced the water supply to a minimum, there was as yet no sign of rain, and the temperature was gradually rising. Thus local conditions tended to favour the spread of the disease, and it was not surprising to learn two or three days later that it had assumed an epidemic form. The fall of rain within a week failed to produce the expected result; the disease still continued to claim new victims, and to increase in virulence with the increasing moisture of the atmosphere and with the stirring up of the soil caused by the flow of storm water.

The first historical notice of the plague refers to an epidemic in Libya, A.D. 98; but there are references in much more ancient writings to pestilences whose nature is not described, but which were rapid and destroyed large numbers of people in a few days. It occurred in Egypt and Syria and extended to Asia and Europe in the 6th century, and was established in Europe for 1,300 years. A variety called the "Black Death," supposed to have originated in North China, was rife in the 14th century. In the 15th century the plague occurred frequently in North Africa, Egypt, West Arabia, Syria, Asia Minor, Mesopotamia, Persia, India, China, and Europe. In the 17th century it lessened in area, disappearing from Italy, England, West Germany, Switzerland, Netherlands, and Spain. In

the 18th century it continued to decrease, only two outbreaks occurring, one in 1708 in Turkey, Hungary, Russia, Poland, Austria, Bohemia, and East Germany, and the other in Provence.

In 1841 it ceased in Europe.

In 1843 it had ceased in Africa, except Egypt, and in 1844 it ceased in Egypt.

The later records are:—

1853.	West Arabia.
1858=59.	Tripoli in North Africa.
1863.	Persian Khurdistan.
1867.	Right bank of Euphrates.
1870.	Persian Khurdistan.
1871=73.	Yunnan.
1873=74.	Left bank of Euphrates.
1874—77.	Bagdad, Euphrates Valley, West Arabia, Tripoli.
1876.	Persia, S. E., near Persia Caspian, N.-W. India.
1877.	S. W. Caspian, Transcaucasia, Astrakhan.
1878.	Persia, Khurdistan, Astrakhan.

From this list it will be seen that it shows a tendency to recur in places where it has been once rife, and to be carried by trade routes from these centres. The considerable communication by crusades and pilgrimages between Christian Europe and Palestine on the one hand, and Mahommedan Asia and Arabia on the other, the former during the Middle Ages and the latter later, have probably served to convey the germs to the homes of pilgrims, as is the case with cholera. A careful consideration of the events of the various epochs would, I think, trace its carriage in every case to the affected district from one or two spots where it is, or has been, endemic, *e.g.*, the Euphrates Valley and Southern China. It appears to be confined to the northern hemisphere and only to flourish between 20° and 40° north of the equator, and not to have existed in the new world at all hitherto.

* * * * * * * * *

Every step of its course here has been corroborative of its contagiousness and its choice of the poorest classes as victims; and of the great preventive power of good ventilation, good food supply, and absence of overcrowding.

As proofs of its being contagious and not atmospheric, conveyed by persons and not originating *de novo* in the soil, and finally due to a microbe which decreases in virulence by continuous cultivation from the parent stock, I adduce the following facts:—

1. The disease is endemic in the province of Yunnan and cases occur every year there, those attacked having buboes with but little constitutional disturbance, and all recovering. After a prolonged drought it assumes a more virulent form, and then becomes epidemic, the persons attacked generally dying. People residing in the same house as the victims very generally contract the disease.

Therefore it is of varying virulence, and generally contagious.

2. Other provinces not having communication with an affected place, but similarly suffering from drought, and subject to the same atmospheric conditions, do not suffer, though their geological conditions are identical, and places with very different atmospheric and geological conditions do suffer if there is personal communication between them and an affected place.

There was an epidemic at Pakhoi in the present year.

There was a prolonged absence of rain at Pakhoi, Canton, and Hong-Kong simultaneously.

The plague made its appearance first at Pakhoi, then at Canton and its vicinity, then at Hong-Kong, and then in the dependencies of Hong-Kong in the order given.

Persons trade between Pakhoi and Canton, between Canton and Hong-Kong, and between Hong-Kong and its dependencies.

The first cases occurring in Hong-Kong were traced to Canton without exception.

The first cases occurring in the dependencies of Hong-Kong were traced to Hong-Kong without exception.

These facts prove that the disease is not atmospheric, that it is not telluric, and that it can be conveyed by persons and be communicated to those with whom they have intercourse.

3. At the commencement of the epidemic, and as it spread, the cases were almost without exception fatal. As the number of cases lessened the symptoms became much modified; death occurred later in fatal cases, and the proportion of deaths to cases was not nearly so large as at first.

This shows a decreasing virulence of the poison.

Professor Kitasato and his colleagues and Dr. Yessin discovered an organism in 25 out of 30 cases in the blood examined, and in all cases in the spleen and buboes of those affected by plague. This organism was a bacillus, the inoculation of a pure cultivation of which was fatal to all animals inoculated, the symptoms and pathological appearances being identical

with those of the persons affected; these bacilli multiplied, and were discovered in the blood, spleen, and solid organs of the animals experimented upon.

In those cases where a history was obtained the origin of the attack was generally traced to intercourse with affected persons, or visits to, or sojourns in, their dwellings.

The dry season of 1894 was a very long one and water ran low everywhere (it was only turned on for two hours in the 24 in Victoria).

In the month of April no rain had fallen, and the plague broke out in Canton. There was an epizootic at the same time among the rats and pigs.

* * * * * * * * *

Numerous recommendations had been made by the medical staff collectively and individually to the Sanitary Committee to (1) close all houses in which the plague had occurred; (2) to form a temporary town of matsheds or junks into which the former occupants of the infected houses might be sent, and where they would be under observation, and their movements be restricted by a cordon or patrols; (3) that every house in the town should be searched daily, the town being divided into districts and sub-districts for the purpose; (4) that the Tung Wa hospital should no longer be used as a receiving place for plague patients, as, owing to the instigation of certain members of its committee (Chinese), every art was being practised there to smuggle corpses and patients away without their being detected.

* * * * * * * * *

The houses in which cases of plague had occurred were disinfected by chlorine gas obtained by acting on chloriated lime with dilute sulphuric acid, and this disinfection was carried out, under supervision of the Government analyst, by the soldiers. The burying party and their operations were supervised by Captain Hastings, and, as the Chinese were not trustworthy, and took advantage of the flight of coolies from Hong-Kong to demand exorbitant wages, six Europeans from the Sailors' Home volunteered and carried out the burials. The corpses were removed from the Tung Wa in a waggon which carried from six to ten at one time. All were coffined in lime, and their mats, &c., were burned. By this time the organisation was fairly complete, and the disinfecting parties were able to disinfect every house on the same day as a case occurred. The amount of rubbish found in a Chinese house is very great. All that was not good or useful to the Chinese, and that was likely to contain plague germs, was burned on the spot, if the street was wide enough, and if not, taken to some waste ground and burned in a furnace.

Empty houses were rented by the Permanent Committee, and such people as could not afford, or did not wish to leave the colony, whose houses had been shut, were put into them. The great majority of the cases came from the district of Taiping-Shan, and out of about 20 blocks of houses, until a period was reached at which only a few of these houses were open, the remainder having yielded three cases of plague and being closed for that reason. It was decided then to examine and close all such houses in this district as were objectionable on sanitary grounds, and the result was that they were all closed, and the streets were built up and the inhabitants removed to other houses. This proved a most salutary measure, for out of about 600 families removed, only nine cases of plague have since been found, those admitted within eight days (the period of incubation) having been excepted.

* * * * * * * * *

The things to be undertaken are:—

I. The evacuation of all basements as dwelling-houses.
II. The redraining of such houses as are defective in that respect (this will take more time).
III. The increase of water supply, which is promised to be complete by May 1895.
IV. The laying down of imperishable and non-absorbent floors in all basements and ground floors.
V. The inspection and closing of wells which are not protected.
VI. The removal of all mezzanine floors, which are contrary to regulations (this is already being done).
VII. The registration of coolie-houses, an order to bring them under frequent inspection.

* * * * * * * * *

Symptoms.—*Fever*, ushered in by chills, occasionally running to 104° or above it. *Constipation* the rule, but *diarrhœa* occasional, giving place to former. *Vomiting* not unocmmon. *Headache* often severe and referred to various regions, temporal more especially. *Tongue* furred—at first white, then yellow, then brown to black, and very dry. Sordes on teeth. Pain in the region of a group of *lymphatic glands* generally femoral, inguinal, cervical or axillary, occasionally mesenteric or bronchial, in the order of frequency above, and generally confined to one group. The cervical glands are most commonly affected in children in my experience. The pain is acute, and of a stabbing character, and the region is very intensely tender. The site is determined in some instances by a wound or scratch; but this is, of course, often wanting. The gland or group next becomes enlarged (the affection of the glands may precede, accompany, or follow, in one case by as much as six days, the onset of the fever), and great local infiltration takes place. *Cerebral symptoms* are generally marked, and in fatal cases very severe; delirium, convulsions, and coma following one another in

quick succession. Sleeplessness is a frequent and very exhauting symptom. I have seen *hæmorrhages* from nose, stomach, vagina, and bowel, and in a very few cases subcutaneous extravasations and petechiæ. The *pulse* is at first rapid, and in a severe case soon becomes running, and the heart fails very suddenly, often giving rise to a fatal syncope. The patient may be walking in the street and suddenly reel and fall, and be found to be dead.

The *blood* is rapidly deprived of hæmoglobin, and after a few days becomes thick and tarry. After death it is liquid. There is sometimes *staining* of the skin and *conjunctivæ*, as in jaundice. The *spleen* is always somewhat enlarged, the *liver* sometimes *Urine* contains albumen in some cases. There is involuntary micturition in cases of comatose or semi-comatose people, occasionally retention. The *appearance* of a plague-stricken person is suggestive. In some cases the face is anxious, in the majority apathetic, the eyes fixed and staring, saliva dribbling from the mouth, and often incontinence of urine. The skin is dusky or yellowish, and the patient may be rather wildly delirious or with clonic spasms, or comatose. A cursory glance at a patient with the more common apathetic countenance is somewhat deceptive, as he may look as if nothing were the matter, and yet die a moment later. Latterly in this epidemic there have been cases in which the bubo does not exist, but which have been proved to be cases of plague both by the finding of Kitasato's plague bacillus and by the high rate of mortality.

Complications are pericarditis and myocarditis, congestion of lungs, and abscesses other than glandular, some cases of hypopion have been seen.

COURSE.—The temperature rises somewhat suddenly and is unaffected by quinine or other antipyretics. The tendency to hyperpyrexia is not very great.

The bubo, if any, may have commenced before the fever, or may be coincident with, or follow it. The appetite is lost, and there is much thirst, diarrhœa or vomiting may appear, the diarrhœa generally ceasing shortly and being succeeded by obstinate constipation. On the second day the symptoms are well established and the patient is probably delirious. It is not uncommon for death to occur at this time. In some cases it has happened within 12 hours of seizure, but these are not common, and it is difficult to get a correct history from the relatives. But I have a personal knowledge of one case, that of a chair coolie, who was to all appearance quite well, and at his occupation till 4-30 P.M., felt ill at 5 and lay down, was sent to hospital with a well-marked bubo and high fever on the next morning at 9 A.M., and was dead at 10 A.M. on the third day. The temparature remains high for a variable period, unaffected by quinine and antipyretics and falls gradually on about the sixth day. Delirium may be very violent, and give place to convulsions and coma, but in the cases of apparently sudden death the patient is quite sensible throughout to all appearance, and in many of these cases it has been impossible to detect any bubo after death. (The opportunities of *post-mortem* examination are few, and it is unknown whether some of the visceral lymphatic glands have been the seat of affection in such cases.) The pulse often begins to fail after two or three days, and the blood loses its hæmoglobin very quickly When once the bubo has commenced, it swells up very rapidly, but the amount of peripheral effusion and the tenderness of the part prevent an accurate estimate of the size of the gland or glands. It appears to be as large as a hen's egg in some instances. If incised at this time, there is found to be a bloody extravasation in and around it, and much serious infiltration in the tissues about. The pain and tenderness gradually subside as the case goes on.

Buboes suppurate in about 78 per cent. of cases if they survive.

About the fourth or fifth day the patient is at his worst, and the symptoms are most intense. The tongue is dry and black, the pulse running, the head-ache or other cerebral symptoms intense, the hæmoglobin down perhaps to 35 per cent. Semi-consciousness, or convulsions, or coma; the temperature 104° to 105°, and death most frequently happens on the 6th day. There may have been hæmatemesis or epistaxis or hæmorrhages from other cavities, and the skin may show petechiæ or extravasation. There may be hypostatic congestion of the lungs and dyspnœa. If recovery is to take place the temperature gradually subsides, and the bubo may suppurate. Favourable signs are: moderate fever, maintenance of pulse, mild cerebral symptoms, absence of complications, and tiding over the 10th day; gradual return of appetite, and perhaps suppuration of bubo, but this is a matter generally of lapse of time. When opened it is very slow of healing, and the glands are often caseous; the discharge is bloody at first, and thin and ichorous later on.

There has been no time to know what sequelæ may occur, but strength returns very slowly, and the patient has to be kept isolated for a month at least from date of attack, as the blood contains bacilli for three weeks in almost all cases.

TREATMENT.—This is adapted to combat symptoms. In the beginning a calomel purge, and if fever is high antipyrine or phenacetin are generally given, though their effect is very slight. Bromide of potassium or ammonium is generally necessary to procure sleep, as insomnia is a most common and distressing symptom. A free use of stimulants is absolutely necessary, and the recumbent position must be strictly maintained, as death in apparently promising cases has occurred more than once or twice on the patient getting up when the nurse's back was turned.

There was in the Alice Memorial branch an experimental treatment adopted, the injection hypodermically of iodide of mercury, according to the formula of Dr. Sims Woodhead, for which success is claimed.

Musk has been given, but it is more costly and not more effibient than alcoholic

The patients is placed on a milk and beef tea diet and carefully watched. Ice is allowed to allay thirst, and ice-bags, &c., applied to head.

On its suppurating the bubo is opened, but it is unnecessary to made incisions previous to its suppurating as recommended by some, and in cases where this has been done, no benefit has accrued, and it is to be deprecated as it only increases the exhaustion of the patient.

Poultices and applications of belladonna to the bubo allay the pain, and other symptoms must be treated as they arise.

* * * * * * * * *

Diagnosis.—This, during an epidemic is a matter of little or no difficulty when the case is a well marked one, but towards the end of this epidemic very atypical and anomalous cases occurred whose nature was proved by the finding of bacilli and by their generally fatal issue.

The diseases which may be confounded with it are *typhus fever*, *malarial fever*, and cases of *bubo* due to other causes and accompanied by fever. Doubtful cases should be placed under observation and examinations of the blood for bacilli should be made, as the finding of these is the only proof absolute of the disease being plague.

The leading symtoms are great gravity of constitutional disturbance, bubo, and furred tongue, the latter very typical.

The period of incumbation is from three to five days, or possibly seven.

The mortality differed in Europeans and Chinese, in the former 2 out of 13 attacked, in the latter 9 out of 13 nearly dying, or 15 and 70 per cent. respectively.

The characters of the plague bacillus are as follows, as described by Professor Kitasato, its discoverer :—

They are one of three organisms of the nature of bacilli which are found *in the blood*, the others being that of anthrax, and relapsing fever.

They have capsules, and the poles are more easily stained than the middle part.

The first *cultivations* showed bacilli differing only from the original ones in being slightly longer, and staining better in the middle.

Mice *inoculated* from spleen and blood died in two days, with œdema around the point of inoculation, and the same bacilli reproduced in the blood and internal organs.

All animals inoculated from cultivations died in from 1 to 4 days, according to size, with the same symptoms.

These bacilli were found in all persons examined who had died of plague, in the buboes, spleen, lungs, liver and blood in the heart, in fact everywhere, and every cultivation from them produced the same bacilli.

They show very little *movement*, and are strongest in blood serum, which they do not liquefy.

The colonies in tube cultivations have a globular appearance, and are like glass wool.

They *grew* best at a temperature of 28° to 30° C. They were not seen by Professor Kitasato to form *spores*.

The disease was produced in mice, rats, and guinea pigs by *inoculation*, and in mice and guinea pigs by *feeding* with pure cultivations of bacillus, and small pieces of spleen of persons dead of plague.

The dust in houses where cases of plague had occurred was introduced by inoculation into mammals, and produced plague in the case of one mouse, and tetanus in the majority.

Trismus is a very common cause of death here, and tetanus bacilli very frequent in the dust of all houses.

The bacilli die on *desiccation* and exposure to the sun after four hours.

Heat.—At 80° C. those heated for 30 minutes were destroyed; at 100° C. they were dead in a few minutes.

Carbolic Acid.—½ per cent. and ¼ per cent. solution for one hour did not kill; a 1 per cent. solution killed in one hour.

Quicklime.—½ per cent. retarded growth; 1 per cent. killed.

Here it may be stated that Dr Yersin, the French bacteriologist, discovered that at a depth of seven inches sufficient plague bacilli to produce a very large cultivation were obtained from the floor of a house in Taiping-shan infected with plague.

The animals inoculated with these bacilli did not die, but the characters of appearance of the bacilli were identical with those of the plague bacilli. They were evidently not virulent. They have been found again in other houses, but produced no symptoms on animals inoculated with them.

Whether they are attenuated cultivations of the real plague bacillus or a distinct bacillus is a matter hitherto of conjecture.

Further results are expected of Professor Kitasato's researches, which will doubtless appear in due time.

He recommends disinfection of houses attacked by 2 per cent. solution of carbolic acid or quicklime, of clothing by steam at 100° C. Burial of dead at 3 metres from surface, disinfection of fæces with quicklime. Removal of dead rats and mice with proper precautions, and isolation of plague patients for one month after apparent recovery. Cure in the obtaining of food to avoid infected sources.

* * * * * * * * *

There are many houses built *back to back* to economise space, and this arrangement is a very bad one, as it leads to certain insanitary conditions:—

1st. Obstruction of ventilation.
2nd. Obstruction of light.
3rd. To the drains necessarily passing under the floor of the house; 60 feet being a frequent length of piping required for the house drains.

In high houses the light and air are almost entirely excluded from the lower storeys, and people who live in the houses contract the ventilating shaft by roofing it partly over, either to gain in floor space above or keep the rain from falling into the small yard below.

* * * * * * * *

Personal Prophylaxis.—The bacillus, so far, is known to gain access by (*a*) *respiration*, (*b*) *inoculation*, and (*c*) *food*. It is, therefore, a sufficiently remarkable fact that only one person in attendance on the sick or burying the dead has been attacked, though very many have had a day or two of indisposition, *e.g.*, sore throat, vomiting, diarrhœa, while the hospitals were full, and of the working parties when the work of house cleaning and disinfection was going on. The person who had been in attendance on the sick, and who contracted plague and died of it, was a nun, who developed slight fever five days after the branch of the hospital at which she was working had closed. It is a slightly doubtful case as to its real origin, but probably the disease was contracted in nursing. No doubt, all of us who were in constant communication with the sick inhaled germs continually, and Captain Vesey certainly got his attack in consequence of inhaling dust charged with bacilli during his work of house cleaning, at which he was indefatigable. The disease was practically confined to people who lived in ill-ventilated and dark rooms, and had poor food, and cohabited with infected persons or lived in infected surroundings, and to those having an unusually close contact with the sick—(certain of the Europeans attacked had had sexual intercourses with prostitutes, a good many of whom suffered from plague)—and these cases would be under cause (*b*). People who were (*a*) well fed and housed generally escaped, unless they happened to get a concentrated dose and were in a receptive conditon; (*b*) people who had a knowledge of the conditions of reception, and who took precautions, such as washing with antiseptics, avoiding direct inhalation, and who worked in well-ventilated apartments, and inhaled fresh air at intervals, also escaped.

It is, therefore, indicated that these are the conditions to observe, viz, :—

I. To avoid contact and direct inhalation of a patient's breath, as far as duty permits.
II. To wash the hands and mouth with proper antiseptics after work, and change the clothes.
III. To avoid work in connexion with the sick and their surroundings, if not in good health.
IV. To have hospitals and abode well ventilated, and to get fresh air as much as possible. These precautions are sufficient to prevent any likelihood of contracting disease by respiration.
V. If working on dwellings and clothing of patients to cover mouth and nostrils with a handkerchief dipped in carbolic acid solution, 1 in 40.

Inoculation.—Professor Kitasato and Dr. Yersin proved the inoculability of the disease upon rabbits and guinea pigs. It has also been noticed that the site of the bubo seems to be determined by the existence of a scratch or cut of the area from which the affected glands absorb. The Chinese coolies always go barefoot or with grass shoes, and abrasions and cuts are very common on their feet. The vast majority of buboes were in the femoral region. It is possible that these, or some of them, got their attack by inoculation.

The precautions for prevention of this mode of contraction are sufficiently obvious.

By Food, including water. The affection of human beings by this mode of access of the germ has not been proved, but it is highly likely. Professor Kitasato fed mice, guinea pigs, &c., on cultivations of the bacillus, and also on buboes, portions of spleen, &c., of affected animals and persons, and produced the disease in this way.

The precautions against attack thus may be as follows:—

I. To boil all water.
II. To eat no uncooked food.
III. To be sure of the impossibility of contamination of all food matters by servants, shop-keepers, or merchants.

General Prophylaxis.—The drainage, water supply, food-supply, ventilation of streets and dwellings, removal of dust have to be most particularly looked after. In this place night-soil and urine are used for the manuring of fields and market gardens by the Chinese. This may be a source of danger to consumers of vegetables.

All wells not protected from contamination should be closed.

The source of food-supply, as bakeries, butcheries, &c., should be carefully watched.

Overcrowding of dwellings should be prevented. Streets should be kept scrupulously clean, and rubbish of any description must be removed and not allowed to accumulate.

All combustible rubbish should be burned, and incombustible rubbish taken out to sea The sewers should be flushed at frequent intervals.

Dead rats and other animals should be treated as possible sources of infection, as the bacteriologists have found plague bacilli in them; and as large numbers of them had died, first previously to the epidemic among human beings, and since then during its continuance it is reasonably imaginable that the epizootic among them may be the effect of the same bacillus, as is beyond doubt the cause of the plague.

(In most epidemics of this disease there has been an epizootic among rats and sheep preceding it. An epizootic occurred among pigs in Canton.) The floors of all dwelling-houses should be of material impervious to gas or water, as it is possible that the bacillus thrives in the ground, at all events near the surface in infected houses, and it is probable that it regains its virulence there, and in favourable seasons flourishes and gives off quantities of germs and spores, hence the floors should be made incapable of absorbing fluid from above and permitting the egress of gases carrying microbes from the ground beneath. House drains should be trapped and well constructed.

It is probable that the germs may be carried by the clothing of persons sick of plague, and such absorbent articles as are in contact with them or have received their dejecta and breath. Such articles when possible should be destroyed or disinfected by heat.

The patients should be immediately isolated and segregated in hospital and the apartment occupied by them thoroughly disinfected, their clothing, &c., being dealt with as described above.

The other occupants of an affected house should be watched, and if several cases occur in a house the remainder of the persons, if any there, should be removed from such house to temporary quarters to be under observation. The period of observation should be eight days.

All obstructions to ventilation should be summarily removed from houses.

If there are houses which have contained patients in such numbers and sequence as to make it likely that the plague is indigenous there by reason of the germs multiplying in its structure, such houses should be evacuated and closed, and the woodwork destroyed and burned within the walls: the floor or the ground should be disinfected by quicklime and re-cemented, and it should stand empty with doors and windows open for fourteen days at least. The woodwork may then be renewed and the house reoccupied.

WEATHER AND CROP REPORT.

For the week ending the 12th October, 1896.

Burdwan.—Rainfall nil all over the district. Weather fair and hot. Harvesting of *aus* and jute and sowing of *rabi* going on. Prospects of *aman* bad in Raniganj thana for want of rain. Rain badly wanted in all the thanas. Sugarcane doing well. Supply of fodder and water sufficient. Common rice selling as follows:—

	Srs.	
Sadar	11½ to 17	per rupee.
Kalna	12	
Katwa	12 to 13½	
Raniganj	12 to 14	

Midnapore.—No rain during the week. Weather seasonable and cool for this time of the year. Indigo has been sown. Jute is being reaped. Sugarcane hopeful, but paddy is withering in places for want of moisture. Outlook anxious. Cattle-disease reported from town, Garbeta and Binpur. Fodder and water sufficient. Coarse rice selling as follows:—

	Srs.	
Sadar	14	per rupee.
Contai	16 to 17	
Tamluk	13	
Ghatal	13 to 15	

24-Parganas.—Rainfall nil. Weather hot in the day and cool in the night. Steeping of jute continues. Prospect of *aman* paddy favourable. Rain is badly wanted. Ploughing for *rabi* crops is going on in the Barasat and Basirhat subdivisions. Stray cases of small-pox among cattle reported from thana Port Canning. Condition of cattle generally good. Fodder and water sufficient. Common rice sells as follows—

	Srs.	c.	
Sadar	10 to 12	8	per rupee.
Diamond Harbour	11	6	
Barasat	9	0	
Basirhat	10	0	

Murshidabad.—No rain. Weather seasonable Sowing of *kalai* and indigo going on. Harvesting of *aus* continues. Rain wanted for *aman*. State of sugarcane good. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	11	per rupee.
Kandi	12¾	
Jangipur	11½	

Khulna.—No rain. Weather fine and cool. *Aman* paddy not yet transplanted in south of district for want of rain. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	c.	
Khulna	10	0	per rupee.
Bagirhat	9	13	
Satkhira	9	8	

Dinajpur.—Rainfall nil. Weather seasonable. Standing crops doing well. Common rice selling from 10 to 12 seers a rupee. No cattle-disease. Fodder and water sufficient.

Rangpur.—Average rainfall ·05. Transplantation of *aman* finished. Washing of jute still going on. Preparation of land for tobacco has begun. Prospects fair. Common rice selling from 9 to 12 seers per rupee. Fodder and water sufficient.

Pabna.—Rainfall nil. Weather hot and dry. *Aman* crop very poor. Rice selling at 7 to 8 seers at Sirajganj and 8 to 9 seers per rupee at Pabna. Fodder available.

Dacca.—Rainfall nil. Weather seasonable. Prospects of *aman* fair. Fodder available. No cattle-disease. Common rice selling at 9 seers per rupee.

Chittagong.—Rainfall 1·08. Weather very hot. Prospects of *aman* fair; but a little more rain is needed. Water and fodder sufficient. Rice sells at 11 seers per rupee.

Patna.—Rain urgently wanted for the rice crop and *rabi* sowings, which are being retarded in high lands. Prices stationary since last report. Common rice selling in Patna at 10½ seers per rupee. Fodder and water sufficient.

Gaya.—Prospects fair. Rain urgently wanted. *Rabi* lands being prepared. Common rice sells at 9½ seers, against average of 14 seers per rupee.

Champaran.—No rain. Winter rice withering on high land. Rain in a week will give a six or seven-anna crop. *Bhadoi* harvest well advanced with 8 to 9 annas' outturn. Price of common rice at Sadar 11 seers, against average of 15¾ seers per rupee. Fodder and water sufficient.

Darbhanga.—No rain during the week. Rain badly wanted for paddy. Fields are being prepared for *rabi*. Prices high as last week.

Bhagalpur.—Report not received.

Purnea.—No rain. Harvesting of *bhadoi* paddy finished. Prospects of winter rice fair. More rain would be beneficial. Steeping of jute in progress. Land is being prepared for winter crops. Cattle-disease abating. Fodder and water sufficient. Common rice selling as follows:—

	Srs.	
Sadar	11	per rupee.
Araria	11	
Kishenganj	9	

Cuttack.—Rainfall nil. Weather getting cool. Rain very badly wanted. *Laghu* rice ripening. *Sarad* rice is still being transplanted. *Rabi* being sown. *Laghu* rice damaged by insects. Condition of cattle good. Fodder sufficient. Common rice sells as follows:—

	Srs.	c.	
Cuttack	15	12	per rupee.
Jajpur	17	1	
Kendrapara	18	6	
Banki	21	0	

Hazaribagh.—Days warm; nights cool; cloudless sky. Rain urgently wanted at Sadar to save higher lands. Giridi reports fair prospects. Price of rice varies from 6 to 12 seers per rupee according to local demand. Goladars laying in supplies for a rise in prices.

General Summary.—With the exception of a shower at Chittagong, there was practically no rain in any other reporting district during the week. Rain is urgently wanted for the winter rice crop, which is beginning to wither on high lands in the Patna Division and in other parts. The reports from North and East Bengal continue satisfactory. In Cuttack insects have done damage to the *laghu* rice, which is ripening. The harvesting of early rice and the washing of jute are still going on in some districts. The preparation of lands for *rabi* crops is proceeding. Cattle-disease is still reported from Midnapore. It is abating in Purnea. The price of common rice continues abnormally high throughout the Province; but there has been no material rise since last week.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 13th October, 1896.

M. FINUCANE,
Offg. Secy. to the Govt. of Bengal.

STATEMENT SHOWING THE STOCKS OF RICE IN AND AROUND CALCUTTA.

Names of Marts.	Stock in hand as compiled on—												
	1st week of Oct. 1895.	1st week of Nov. 1895.	1st week of Dec. 1895.	1st week of Jan. 1896.	1st week of Feb. 1896.	1st week of March 1896	1st week of April 1896.	1st week of May 1896.	1st week of June 1896	1st week of July 1896.	1st week of August 1896.	1st week of Sept. 1896.	1st week of Oct. 1896.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF SEPTEMBER 1896.

DURING August unusually settled weather prevailed over the Bay, and the most important disturbances were due to the land depressions, not because they gave rise to stormy weather, but because of the general and at times heavy rain which accompanied them.

There have been even fewer disturbances in September, and the pressure distribution which had become established towards the end of August, was maintained with little interruption throughout the month. The most prominent feature of the pressure distribution was the relatively high readings in west of the Bay compared with the north-east of the province and Assam, an arrangement which caused continuous westerly winds in the western districts. In consequence of these westerly winds the monsoon current was to a large extent confined to the eastern half of the province, and over that part rainfall has been above the normal. In the central districts very nearly the normal fall was received, but towards the west rainfall became much more scanty, especially is the west of Behar, where only about 2 inches fell during the whole month.

The rainfall in all districts would have been much below the normal, but for a depression which occurred about the middle of the month. It began in the east of the Bay and moved northwards until it reached the Sunderbans, after which its course was more erratic. Being a shallow depression, a moderate rise of pressure in Burma and Assam caused it to move towards the west, slowly for two days, the centre passing close to Saugor Island and Balasore. It then turned to the north-west, then north, and finally it moved eastward into North Bengal, where it filled up before reaching the Himalayas.

As the depression remained shallow and did not give rise to strong winds, conditions were favourable for rainfall, and during the five days which elapsed from the time when it was over the Sunderbans till it filled up in North Bengal, every part of the province was affected by it, except the extreme western districts, where winds remained westerly and very little rain fell.

After the depression filled up the pressure distribution of the early part of the month was renewed, westerly winds became general, and such rain as fell was confined to the east and centre of the province. The rainfall was chiefly due to the local thunderstorms which are of frequent occurrence towards the end of monsoon season.

On the Ist of the month the area of lowest pressure extended along the foot of the hills from Bihar over north Bengal into Assam. Readings increased more rapidly towards the south than is usual at the beginning of September, and the isobars ran almost east and west. The distribution over the Bay differed very little from the normal, but inland defect increased towards the north-east, varying from a few thousandths of an inch in Orissa to more than a tenth of an inch in North Bengal and Assam. In effect this was the same as if a shallow depression lay over the province with the area of lowest pressure in North Bengal. Westerly winds prevailed over the Bay and the province, except in the extreme north, where they blew from the east or north-east. Very little rain was falling and temperature was above the normal, most so in the west.

Though pressure was rising during the three following days, changes were uniform and the distribution retained the same features. The only change of importance was the increasing rainfall in the eastern districts. It began in Arakan and South-East Bengal on the 2nd, and extended northwards, being most marked in North Bengal on the 4th. This rainfall caused lower temperatures at eastern stations, but elsewhere excess had increased, and varied from 2° in the central districts to 5° in the west.

The steady slow rise of pressure ceased on the 5th, when the difference from the normal varied from excess of a tenth of an inch in the circars to a small defect in the extreme north-east. The fall which followed continued for two days only, the 6th and 7th, after which there was a slow rise for two days. Then a fall began and led to the depression which a a few days later caused the heavy rainfall about the middle of the month.

On the 12th barometric readings were very uniform over the province and the north of the Bay, and the chief sign of the commencing disturbance was the steepening gradient in the south of the Bay. Heavy rain had began in the south of Burma, but though the low pressure area extended northwards into North Bengal and Assam, as shown by the variation from the normal, fine weather prevailed in Bengal with light westerly winds and high temperature. The shallow depression was more to the north on the 13th, pressure being lowest in Arakan, the Sunderbans and the north-east of the Bay. The cyclonic circulation was more regular, but even over the Bay wind force was not more than moderate.

Up to this time the depression had been very shallow and diffused, with the gradient moderately steep towards the south. On the 14th a brisk rise of pressure, occurred in Burma and Assam, by which the depression became better defined, and was forced westwards. The

centre was near Saugor Island, where there was defect of ·166 inch, and rainfall became rather heavy and general in East Bengal. During the following 24 hours considerable development occurred, owing to the double change which obtained. The brisk rise of pressure continued in the east and extended to the north of the province, and a slow rise had prevailed elsewhere, except in the south-western districts, where there had been a slow to brisk fall. The disturbance having concentrated and deepened, a much more regular cyclonic circulation of winds followed, and cloudy showery weather became general over the whole province. Over the Bay also weather became more disturbed, but it was not felt to any great extent at the coast stations.

On the 14th and 15th the depression moved westward across the north of the Bay; it then began to recurve: on the 16th it was moving north-westward towards Chota Nagpur with the centre not far from Chaibassa, and on the 17th to the north-east, when the area of lowest pressure was over the centre of the province. The cloudy showery weather had continued during these days over the whole province, but there had nowhere been very heavy falls of rain. With the change of motion to the east, however, very heavy rain set in at first in the west of Bihar and afterwards in North Bengal. On the 17th the average rainfall reported from stations in the west of Bihar was 4 inches, and on the 18th the greater part of North Bengal received an average fall of 6 inches, very nearly a half of the normal fall for the whole month.

The depression was filling up on the 18th and moving slowly to the east or north-east. By the 19th it had almost disappeared, and though a regular cyclonic system of winds remained with a centre near Rampur Boalia, weather in North Bengal was much more settled and rainfall had to a large extent ceased.

With the clearing skies, temperature rose, and westerly winds soon became general, as the pressure distribution tended to become similar to what prevailed in the early part of the month. It was established on the 22nd and became more marked on the 23rd, when the differences from normal pressure varied from excess of ·05 inch in the circars to defect of ·08 inch in North Bengal and the north of Assam.

During the remainder of the month pressure steadily rose over Bengal, a rather large excess accumulating. The effect of this rise at first, especially as a slow fall was at the same time going on in the south of the Bay, was to give the distribution greater uniformity. But as the rise continued more rapidly over the land than over the sea, a shallow depression formed in the Bay. The depression remained diffused, and was gradually forced southwards till it filled up and disappeared about the end of the month.

Though a steady rise of pressure continued in Bengal during the last few days, and readings were very high, the light changeable winds interacted, with the result that thunderstorms and local showers were of frequent occurrence, especially in South-West Bengal and Orissa, where rainfall was almost general. There was also a fall of temperature, which was confined chiefly to the eastern half of the province, where there was defect of about 2° on the 30th.

Pressure as there was only one shallow depression during the month, there were no large changes of pressure. The distribution, which was a marked feature of the early part of the month, and was renewed later, has, in consequence, affected to a considerable extent the average values. These averages are above the normal by ·02 inch in Orissa and Chota Nagpur, and below elsewhere by amounts increasing towards the north-east, where defect is ·03 inch.

Temperature has generally been above the normal over a great part of the province, excess always increasing towards the north-west, where at times it was as much as 6°. From the 14th to the 16th, when cloudy rainy weather prevailed, there was a large fall of temperature at all stations, but especially in the north of the province, at first in Bihar and afterwards in North Bengal, where, owing chiefly to the low day readings, defect was between 5° and 10° for several days. At other times comparatively cool weather prevailed in the east of the province, where showers were more frequent, most so during the first few and the last few days of the month. Owing to the very low temperatures in the middle of the month, means are not affected to such an extent as might be expected from the continuous excess at other times. Mean maximum temperatures are normal in the extreme east, and 1° or 2° above in all other districts, except Bihar, where there is excess of 4°. Average night readings are practically normal. The mean daily temperature for the month is normal in Assam, half a degree above in North and East Bengal, 1° above in South-West Bengal and Orissa, and nearly 2° above in Chota Nagpur and Bihar.

Rainfall.—Owing to the heavy rainfall in the middle of the month, the total amounts for the month do not differ much from the normal, except in a few districts in the west of Bihar and Chota Nagpur, where only a small fraction of the usual amount was received. The fairly uniform distribution of the rainfall was due to the unusual course taken by the depression, its slow motion and absence of strong winds, all of which circumstances were favourable for heavy general rain. As it moved from the north-east of the Bay and the adjacent part of East Bengal westwards as far as the north of Orissa, then north-westward

towards Chota Nagpur, and from there north-eastward into North Bengal, there was no part of the province which did not come under its influence, except the north-western districts. General rain fell for four or five days, but the heaviest falls occurred in the west of Bihar and in North Bengal, when the depression was filling up.

The pressure distribution at other times caused the weak monsoon current to tend towards the east of the province, and the showers which fell with moderate frequency caused the slight excess in the east of the province as compared with the western and central districts.

The average fall in Chota Nagpur is 5·36 inches, in Bihar 6·4, South-West Bengal 7·45, and in Orissa 9·48. These are all below the normal, the first two by rather more than 2 inches and the last two by about 1 inch. The fall in East Bengal is 12·66 and in North Bengal 14·63 inches, both amounts being between 1 and 2 inches in excess.

As will be seen in a table given below, the average fall from the beginning of the year up to the end of September is below the average in all districts except Orissa, where there is 15 per cent. excess. Bihar has received 78 per cent. Bengal proper from 81 to 89 per cent., and Chota Nagpur 93 per cent.

During September Champaran and Saran districts received on an average about 2 inches only, and several of the rainfall stations in these districts reported only a fraction of an inch. Over almost the whole of the western half of Bihar defect was more than 3 inches and increased towards the west to 8 inches. In Chota Nagpur, defect varied from 2 to 5 inches, and in the central parts of Bengal proper there was a variable defect generally under 2 inches. The area of excess falls includes the greater part of East and North Bengal and the east of Bihar, the difference from the normal being small except in Rangpur, Cooch Behar and some of the hill stations, where there was excess of from 5 to 15 inches. In Orissa there was a small defect, except in the Cuttack and Puri districts, where there was a moderate excess.

The following table gives a condensed summary of the rainfall statistics of the present year up to date for each meteorological division, the first nine columns giving the actual average falls in each division for each month expressed as a percentage of the normal, while the tenth column gives the actual rainfall of the first nine months as a percentage of the normal rainfall for that period:—

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	July.	August.	September.	Actual rainfall of first nine months of 1896 expressed as a percentage of the normal fall for the period.
South-West Bengal ...	31	18	18	36	97	128	95	71	86	89
North Bengal ...	8	5	2	63	142	49	106	39	109	81
East Bengal ...	48	110	43	94	115	99	72	46	118	85
Bihar ...	16	5	0	26	102	84	85	75	75	78
Orissa ...	3	0	50	31	78	162	131	128	88	115
Chota Nagpur ...	6	9	0	0	49	139	112	89	65	93

The following tables contains full data for the comparison of the actual and normal rainfall of the month of September in all districts of the Province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance or weight being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 25 years; the second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district; the third column expresses the ratio of the actual district fall of the past month to the normal rainfall as a percentage, and the fourth column states as a percentage how much the district rainfall for the month varied from the normal:—

Percentage Table for September 1896.

Division.	District.	Normal district rainfall for September.	Actual district rainfall for September 1896.	Percentage of actual to normal rainfall.	Percentage excess (+), deficit (−).

FINANCIAL RESOLUTION.

FINANCIAL DEPARTMENT—FINANCE.

Darjeeling, the 10th October 1896.

RESOLUTION—No. 769 T.—F.

THE Lieutenant-Governor is now in a position to review the actual financial results of the year 1894-95, the revised estimate for the year 1895-96, and the budget estimates for the year 1896-97. The final accounts of the first year, with the Accountant-General's memorandum thereon, have been received; and although the accounts of the second year have not yet been finally closed, the approximate unadjusted figures for twelve months given in his accounts for March 1896 are sufficient for practical purposes. The figures of the first four, and in some cases five, months of the current year have also been received, and these afford sufficient materials for a revised forecast of the probable financial position of the Province in the last year of the contract. In the Financial Resolution No. 5191F., dated the 27th December 1892, the financial and administrative results of the working of the Provincial contract for the five years 1887-88 to 1891-92 were reviewed. The existing contract came into force on the 1st April 1892, and will expire with the current year. As a new financial contract with the Government of India will

now be made, it will be convenient, after reviewing the budget estimate for 1896-97, to examine the general results of the working of the present contract during the five years covered by it.

PART I.

Accounts of 1894-95.

2. The actuals of 1894-95, furnished by the Accountant-General in his Memorandum on the accounts of the year, are compared in the following table, with the approximate actuals adopted in the Financial Resolution No. 5583F., dated the 5th November 1895:—

Receipts.		Heads.	Outgoings.	
Figures adopted in November 1895.	Actuals reported by the Account-ant-General.		Figures adopted in November 1895.	Actuals reported by the Account-ant-General.

24,01,000	24,01,000	Irrigation and Navigation ...	52,93,060	52,93,058
4,76,306	4,77,469	Buildings and Roads ...	27,29,837	27,29,837
11,500	11,500	Contributions	12,49,917	12,49,917
4,46,19,722	4,46,23,191	Total ...	4,29,20,640	4,29,25,233
26,24,038	26,24,038	Opening balance	.....	.....
.....	... ..	Closing do.	43,23,120	43,21,996
4,72,43,760	4,72,47,229	Grand Total	4,72,43,760	4,72,47,229
.. ...	.....	Provincial surplus ...	16,99,082	16,97,958

3. The approximate actuals adopted in the Financial Resolution of the 5th November 1895 assumed that the year 1894-95 had opened with a balance of Rs. 26,24,038, and closed with a balance of Rs. 43,23,120; that the total amount available for expenditure was Rs. 4,72,43,760, and that Rs. 4,29,20,640 had been spent. The actual result was less favourable by Rs. 1,124 only. The amount available for expenditure was Rs. 4,72,47,229, and the amount actually expended Rs. 4,29,25,233. The closing balance was Rs. 43,21,996.

4. There was an increase of Rs. 3,469 on the revenue side, and of Rs. 4,593 on the expenditure side. The following statement shows the chief differences in respect of which the accounts were better (+) or worse (—) than the approximate actuals:—

	Revenue side.	Expenditure side.
	Rs.	Rs.
Land Revenue	—2,458	+17,745
Stamps	+1,110	— 1,020
Provincial Rates	—1,471	—17,105
Interest	+4,316	.....
Stationery and Printing	.....	— 2,701
Civil Works in charge of Civil Officers	+1,163	.....

5. The decrease on the revenue side under *Land Revenue* was due to no adjustment having been made in the Accountant-General's final accounts of the share of the Government of the North-Western Provinces in the cost of a prison van constructed for the conveyance of convicts, for which a credit for Rs. 2,234, being a moiety of the charge, was taken under Land Revenue in the revised

estimate. The adjustment has, however, been made by a debit to that Province in the Exchange Accounts Current with Bengal. The increase under *Stamps* was in the sale of plain paper for use with court-fee stamps, while that under *Interest* was owing to the recoveries from the Howrah Municipality on account of advances made to it for drainage works having exceeded the estimate. The increase under *Civil Works* was in the receipts from ferries.

6. On the expenditure side the decrease under *Land Revenue* was partly under Land Records and Agriculture, owing to an adjustment of part of the cost of the office establishment of the Director of Land Records and Agriculture against the Imperial head of Bihar settlement operations, but chiefly under Management of Government estates in consequence of smaller outlay having been incurred on improvements. The increase under *Provincial Rates* was in valuation and revaluation charges, owing to no provision having been originally made for revaluation work in the district of Patna, while that under *Stationery and Printing* occurred in the Stationery Office at the Presidency.

PART II.

Approximate Actuals of 1895-96.

7. The following table compares the approximate actuals of 1895-96 with the revised estimates adopted by the Government of India:—

			Provincial Surplus (+)	+ 12,29,000	+ 14,67,188

8. Taking the Civil and Public Works heads together, the Provincial receipts of the year amounted to Rs. 4,58,27,096 against the revised estimate of Rs. 4,56,39,000, and the Provincial expenditure to Rs. 4,43,59,943 against the revised estimate of Rs. 4,44,10,000; so that the year closed with an approximate credit balance of Rs. 57,89,149 against Rs. 55,51,000 anticipated when the revised estimate was framed. The main cause of the improvement in the financial position of the Province was the increase in the Provincial share of the net earnings of the Eastern Bengal State Railway system, as shown below:—

	Revised estimate. Rs.	Actuals. Rs.
Receipts	1,39,00,000	1,43,15,686
Working expenses	56,75,000	56,09,676
Net receipts	82,25,000	87,06,010
Provincial share	41,13,000	43,53,005

The increase was due to the heavy jute traffic during the last quarter of the year.

Receipts, 1895-96.

9. The chief fluctuations on the Receipt side, besides those under Railways, are explained below:—

Land Revenue.—The revised estimate of total Land Revenue receipts for 1895-96 was placed at Rs. 3,88,85,000, which included Rs. 75,000 for recoveries from landholders on account of survey charges, which are met from Imperial funds; but although only Rs. 22,692 were recovered on this account, the actual collections amounted to Rs. 3,90,19,438. The 12 per cent. on collections from Government estates came to Rs. 5,02,365 against Rs. 4,77,000 adopted in the revised estimate passed by the Government of India. The Provincial share of land revenue was therefore one-fourth of Rs. (3,90,49,438—22,692—5,02,365) + Rs. 5,02,365=Rs. 1,01,33,460. The adjustments between Imperial and Provincial revenues will, when the account is finally closed, probably result in a net deduction of Rs. 7,16,840 from the Provincial share, as shown below:—

	Revised estimate passed by the Government of India. Rs.	Approximate actuals. Rs.
From Imperial to Provincial—		
(*a*) Grant for the Hijili Canal ...	1,53,000	1,46,000
(*b*) Grant for transfer of Imperial buildings to local authorities	36,000	34,181
(*c*) Assignment for Gnatong Police ...	16,000	16,000
(*d*) Towing charges of *Rhotas*	10,000	10,000
(*e*) Cost of transfer of Mackillop's Hill to Lebong Cantonment	11,000	11,000
(*f*) Cost of additional Customs establishment ...	2,12,000	2,31,008
(*g*) Refund of special contribution	3,00,000	3,00,000
(*h*) Salary of Mr. Davis, probationer gardener ...	.....	584
	7,38,000	7,48,773
From Provincial to Imperial—		
(*j*) Lump contribution under the contract ...	14,39,000	14,39,000
(*k*) Interest on advances for the Hijili Canal ...	26,000	25,863
(*l*) Charges for recalculating certain meteorological data	.....	750
	14,65,000	14,65,613
Net transfers from Provincial to Imperial ...	7,27,000	7,16,840

Provincial Rates.—The budget estimate of total revenue from Provincial Rates for 1895-96 was originally passed for Rs. 42,81,000, but in the revised estimate this was raised to Rs. 43,10,000. The approximate actuals, however, amounted to Rs. 42,74,453, thus:—

	Budget.	Revised.	Actuals.
	Rs.	Rs.	Rs.
Public Works Cess	41,46,000	41,70,000	41,36,985
Rates for the management of private estates	1,35,000	1,40,000	1,37,468
Total ...	42,81,000	43,10,000	42,74,453

Interest.—The actuals amounted to Rs. 2,12,995 against the revised estimate of Rs. 2,40,000, as shown below :—

	Revised estimate.	Actuals.
	Rs.	Rs.
Class I.—Interest on advances to cultivators ...	23,000	23,344
„ II.— Ditto under special laws	30,000	34,746
„ III.—Interest on loans to landholders and other notabilities	30,000	21,809
„ IV.—Interest on loans to Municipalities, District Boards and other public bodies	1,08,000	82,833
Interest on Government securities ...	14,000	11,654
Miscellaneous	35,000	38,609
Total ...	2,40,000	2,12,995

Marine.—The Pilotage receipts show a falling off of Rs. 20,000, and the total receipts under Marine amounted to Rs. 9,68,026, against Rs. 9,90,000, the revised estimate passed by the Government of India.

Irrigation—Major Works.—The total receipts under this head amounted to Rs. 15,15,315, against Rs. 14,50,000, the revised estimate, and Rs. 15,00,000, the budget estimate for the year, as shown below :—

	Budget estimate.	Revised estimate.	Actuals.
	Rs.	Rs.	Rs.
Orissa Project ...	3,28,000	3,28,000	4,17,222
Midnapore Canal ...	2,77,000	2,77,000	2,63,994
Tidal Canal ...	60,000	60,000	61,976
Sone Project ...	8,35,000	7,85,000	7,72,123
Total ...	15,00,000	14,50,000	15,15,315

The actual receipts came to Rs. 15,15,315, or Rs. 65,315 in excess of the revised estimate, owing principally to the recovery within the year of water-rates from the Orissa project, which, but for a change in the canal rules, would have been collected in 1896-97.

Irrigation—Minor Works and Navigation.—A sum of Rs. 7,25,000 was included in the budget estimate as the probable receipts from canals and works under the Public Works Department, but this was subsequently raised to Rs. 7,35,000 in the revised estimate. The actuals aggregated Rs. 7,10,517, or Rs. 24,453 less than the revised estimate. The anticipated revenue was not realized, owing to the very unsatisfactory state of the Nadia rivers, and to the Eastern Bengal State Railway tapping some of the marts which had hitherto used the Circular and Eastern Canals route.

Expenditure, 1895-96.

10. The total expenditure amounted to Rs. 4,43,59,943 against a revised estimate of Rs. 4,44,10,000, showing a saving of Rs. 50,057. The chief fluctuations are explained below :—

Forests.—The total charges of the Forest Department amounted to Rs. 4,66,068, against Rs. 5,90,000, the revised estimate for the year. The Provincial share of the charges was Rs 2,33,034. The saving was mainly due to the reduction of the grant made to the Conservator of Forests, towards the end of the year, to arrange for the supply of sleepers to the Rai Bareli-Benares Railway.

Jails.—The total expenditure of the Department was Rs. 22,58,387 against Rs. 21,95,000, the revised estimate for the year. The increase was chiefly under jail manufactures, the charges under this sub-head amounting to Rs. 7,82,905 against Rs. 6,82,000 included in the revised estimate.

Stationery and Printing.—The cost of stationery supplied from Central Stores in 1895-96 was Rs. 5,15,359, against Rs. 6,50,000 provided for in the revised estimate, and this is the main cause of the reduction in the aggregate expenditure of the Department from Rs. 12,28,000 to Rs. 10,88,080.

Irrigation—Major Works.—The total charges under this head were Rs. 12,98,405, against Rs. 13,50,000 provided for in the revised estimate. The decrease occurred on the Midnapore and Sone Canals.

Minor Works and Navigation.—A sum of Rs. 16,22,000 was originally provided for the cost of additional works and up-keep of canals and works in charge of the Public Works Department; but this estimate was subsequently raised to Rs. 17,00,000 by the transfer of the suspense balances, amounting to Rs. 1,06,760, of the Brahmini-Baiturni Division from Major Works, Imperial, to Minor Works and Navigation, Agricultural, Provincial. The actual total expenditure amounted to Rs. 15,64,533, or Rs. 1,35,467 less than the revised estimate. The decrease was due (1) to the provision for establishment not having been fully utilized, (2) to a reduction in the suspense balances of the Circular and Eastern Canals Divisions, and (3) to the inability of the Irrigation Department to spend the whole of the grant for remodelling the Hijili Tidal Canal.

Civil Works in charge of the Public Works Department.—The increase of Rs. 35,752 under this head is partly under original works, and partly under establishment, due to short outlay on works and repairs executed with other than Provincial Funds, and to the adjustment, under this head, of the pay of the Sanitary Engineer, Bengal.

Civil Works in charge of Civil Officers.—The charges under this head came to Rs. 1,86,378 against Rs. 1,25,000 passed by the Government of India in the revised estimate. The increase was due to (1) an additional grant made to the Calcutta Municipality on account of the Marcus Square Recreation Ground, (2) to the adjustment in the Civil Department of all Public Works charges in Angul, and (3) to the cost of fitting up the Chemical and Physical Laboratory of the Sibpur Engineering College, which was taken under this head.

PART III.

Budget Estimate, 1896-97.

11. Turning now to the estimates of the current year, and making use of the latest information available, the following table compares the figures which

were passed by the Government of India with those which the Lieutenant-Governor has now decided to adopt :—

Receipts.	Budget estimate.	Revised estimate now adopted.	Expenditure.	Budget estimate.	Revised estimate now adopted.

Receipts.

12. *Land Revenue.*—The Government of India accepted the estimate of total collections under this head, as passed by the Local Government for 1896-97, amounting to Rs. 3,89,47,000, which included Rs. 2,00,000 for anticipated recoveries on account of Bihar Survey and Settlement charges, which are wholly Imperial. The collections in the first five months of the current year were Rs. 68,85,000, against Rs. 69,48,000 in the corresponding period of last year, showing a decrease of Rs. 63,000. The average receipts for the past five years, excluding recoveries of Survey and Settlement charges, amounted to Rs. 3,87,63,000, while the corresponding receipts of 1895-96 were Rs. 3,90,26,746. These recoveries during the current year are estimated at Rs. 3,51,000, and this would justify a higher estimate; but looking to the prospects of the season,

the Lieutenant-Governor is doubtful whether the forecast of recoveries will be realised, and whether even the Land Revenue receipts proper for the year will come up to the amount collected last year. At present, however, it seems probable that the moderate estimate passed by the Government of India will be reached, and this will accordingly be retained. The adjustments between Provincial and Imperial will probably result in a net reduction of Rs. 13,82,000 in the Provincial share of revenue under this head, as shown below:—

	Budget estimate.	Estimate now adopted.
	Rs.	Rs.
From Imperial to Provincial—		
(*a*) Advance for the Hijili Tidal Canal ...	24,000	24,000
(*b*) Grant for transfer of Imperial buildings to the charge of local bodies	10,000	27,000
(*c*) Assignment for Gnatong Police	16,000	16,000
(*d*) Grant to meet the cost of additional Customs establishment	2,12,000	2,12,000
(*e*) Salary of a probationer gardener for the Royal Botanic Gardens	2,000	1,000
(*f*) Towing charges of the *Rhotas* ...	10,000	10,000
(*g*) Grant for the transfer of Observatory buildings to the charge of the Provincial Public Works Department	.....	1,000
Total ...	2,74,000	2,91,000
From Provincial to Imperial—		
(*h*) Lump contribution under the contract ...	14,39,000	14,39,000
(*i*) Interest on advance for the Hijili Tidal Canal	30,000	29,000
(*k*) Contribution towards the cost of a clock for the General Post Office	5,000	5,000
(*l*) Half of the deferred interest payable by the Port Commissioners, Calcutta, on the Kidderpore Dock loans	.....	2,00,000
Total ...	14,74,000	16,73,000
Net transfer from Provincial to Imperial ...	12,00,000	13,82,000

(*b*) The Government of India, while passing orders on the budgets for 1896-97, allowed a credit of Rs. 10,000 on account of the maintenance charges of certain Imperial Civil and Military Works transferred to the management of local agencies. Since then the construction, maintenance, and repairs of several other Imperial buildings have been entrusted to local bodies, with an aggregate grant of Rs. 18,417; but against this grant has to be set Rs. 1,400, the amount of savings effected by certain District Boards in their grant for annual repairs, and Rs. 115, the amount by which the annual grant to the district of the Sonthal Parganas has been reduced. On the whole, therefore, a credit for Rs. 27,000 will be provisionally taken under this head, subject to further adjustment on completion of the works.

(*e*) There is no probationary gardener at present in the Royal Botanic Gardens; but in case an officer should arrive from England later on in the year, a provision of Rs. 1,000 has been made on this account.

(*g*) The Government of India, in the Public Works Department Resolution No. 105B., dated the 20th March 1896, sanctioned the transfer of certain 2nd and 3rd class Meteorological Observatories from the charge of the Meteorological Reporter to the Government of India to that of the Bengal Public Works Department with an assignment of Rs. 1,491 from the Imperial revenues. A credit of Rs. 1,000, in round numbers, has therefore been taken under this head.

(*l*) The Government of India have offered to remit the Rs. 4,00,000 due from the Port Commissioners of Calcutta as deferred interest on the Kidderpore Dock loans, provided that half of the sum is charged to Provincial revenues. The Lieutenant-Governor has accepted this offer; but as the Dock loans are an Imperial undertaking, it is understood that the Provincial contribution will be

adjusted under Land Revenue, and the Provincial share of the concession has accordingly been entered under this head.

13. *Salt.*—The Provincial receipts under this head amounted to Rs. 1,41,291 in 1894-95 and Rs. 1,78,408 in 1895-96. The receipts in the first four months of the current year show a falling off of Rs. 3,000 as compared with those of the corresponding period of last year. It is doubtful whether the total receipts for the year will exceed Rs. 1,70,000, and the estimate has accordingly been reduced from Rs. 1,75,000 to Rs. 1,70,000.

14. *Stamps.*—The Comptroller-General's latest statement shows that the receipts during the first five months of the current year exceeded those of the corresponding period of last year by Rs. 94,000. The actual receipts in 1895-96 amounted to Rs. 1,67,72,000, and the Lieutenant-Governor thinks that the estimate for 1896-97 may safely be raised from Rs. 1,67,80,000 to Rs. 1,68,00,000. The Provincial share will be Rs. 1,26,00,000.

15. *Excise.*—The estimate for 1896-97 amounts to Rs. 1,33,00,000 against Rs. 1,33,78,000, the actuals of 1895-96. The results of the settlement of excise licenses for 1896-97 up to the 31st May 1896 show an increase of Rs. 2,32,807 as compared with the figures of last year, and the receipts in the first five months of the current year were Rs. 1,03,000 in excess of those of the corresponding period of 1895-96, notwithstanding the fact that the closing of all madak and chandu shops from the 1st April last reduced the settlements by about Rs. 1,26,972. In view of these figures, the estimate of total revenue under this head will be raised from Rs. 1,33,00,000 to Rs. 1,35,00,000. The Provincial share will stand at Rs. 33,75,000.

16. *Assessed taxes.*—The Government of India placed both the revised estimate for 1895-96 and the estimate for 1896-97 at Rs. 46,50,000. The receipts in 1895-96 amounted to Rs. 46,60,080, and the collections in the first five months of the current year show an increase of Rs. 2,62,000 as compared with those of the corresponding period of last year. The increase is attributable partly to better assessments and partly to prompter payments. In view of these circumstances, the Lieutenant-Governor would raise the estimate from Rs. 46,50,000 to Rs. 47,50,000. The Provincial share will stand at Rs. 23,75,000.

17. *Forests.*—The Eastern Bengal State Railway System having indented for 30,000 sleepers, at Rs. 2 each, from the Forest Department, the Conservator of Forests has undertaken to supply them by the 1st February 1897. The estimate will therefore be raised from Rs. 12,70,000 to Rs. 13,30,000. The Provincial share will be Rs. 6,65,000.

18. *Registration.*—The total receipts of the Registration Department for 1896-97 were originally estimated at Rs. 13,65,000 against Rs. 13,41,493, the actuals of 1895-96. The collections in the first four months of the current year show an increase of Rs. 36,000 over those of the corresponding period of last year. The estimate will be raised from Rs. 13,65,000 to Rs. 13,80,000. The Provincial share will stand at Rs. 6,90,000.

19. *Law and Justice—Courts of Law.*—The actuals in 1894-95 were Rs. 8,72,850, and in 1895-96, Rs. 8,41,219. The collections in the first four months of the current year show a falling off of Rs. 7,000, as compared with those of the corresponding period of 1895-96. The estimate will be reduced from Rs. 8,80,000 to Rs. 8,80,000.

20. *Police.*—The approximate actuals in 1895-96 amounted to Rs. 1,89,891, and the receipts during the first four months of the current year show a falling off of Rs. 13,409, as compared with those of the corresponding period of last year. The estimate will be reduced from Rs. 2,01,000 to Rs. 1,80,000.

21. *Medical.*—The original estimate under this head amounted to Rs. 2,05,000 against Rs. 2,09,657, the approximate actuals of 1895-96. The receipts during the first four months of the current year amounted to Rs. 58,955, against Rs. 57,180 obtained in the corresponding period of last year. The estimate will be raised to Rs. 2,10,000.

22. *Scientific and other Minor Departments.*—The receipts under this head in 1895-96 amounted to Rs. 2,35,489, and the realizations in the first four months of the current year show an increase of Rs. 20,000 over those of the corresponding period of last year. The estimate will be raised from Rs. 2,34,000 to Rs. 2,45,000.

23. *Superannuation.*—The receipts under this head in the first four months of the current year amounted to Rs. 10,097, against Rs. 20,750 realized in the corresponding period of last year. The falling off is under Contributions for pensions and gratuities. The actuals in 1895-96 amounted to Rs. 76,008, and the estimate for 1896-97 has been reduced from Rs. 70,000 to Rs. 60,000.

24. *State Railways.*—The following statement compares the estimate passed by the Government of India for 1896-97 with the actuals of 1895-96 :—

	Actuals, 1895-96.	Budget estimate, 1896-97.	Estimate now adopted.
	Rs.	Rs.	Rs.
Gross receipts ...	1,43,15,686	1,30,00,000	1,45,00,000
Working expenses ...	56,09,676	56,75,000	60,00,000
Net receipts ...	87,06,010	73,25,000	85,00,000
Provincial share ...	43,53,005	36,63,000	42,50,000

The approximate gross earnings of the Eastern Bengal State Railway system, from the 1st April to the 29th August 1896, amounted to Rs. 51,30,000, against Rs. 48,59,167 obtained from the 1st April to the 31st August 1895, showing an improvement of Rs. 2,70,833. If the average receipts of two days are added to this, the total increase in five months will be about Rs. 3,74,000. The large receipts in 1895-96 were due to a favourable jute crop; but in view of the increase in the first five months of the current year, and of the brisk demand for jute in Calcutta, the Lieutenant-Governor thinks that the estimate may fairly be raised from Rs. 1,30,00,000 to Rs. 1,45,00,000. The Provincial share of these receipts has therefore been taken at Rs. 42,50,000.

25. *Irrigation—Major Works.*—The latest returns received from the Examiner of Public Works Accounts show that there has been an increase of Rs. 1,20,219 in the actual collections of the first four months of the current year, as compared with the receipts of the corresponding period of last year. The increase is chiefly in water-rates of the Sone Canals, due to the large increase in the area under *rabi* crops, the water-rates on which did not fall due till April 1896. The actuals in 1895-96 aggregated Rs. 15,15,315, and in 1894-95, Rs. 15,24,040; but as the *rabi* rates for the current year will not be fully realized before April of next year, the estimate for the current year can only be safely raised from Rs. 15,00,000 to Rs. 15,50,000.

26. *Irrigation—Minor Works and Navigation.*—The returns from the Examiner of Public Works Accounts show that there has been a falling off of Rs. 11,669 in the receipts during the first four months of the current year, as compared with those obtained in the corresponding period of last year. The total receipts in 1894-95 amounted to Rs. 6,95,613, and those in 1895-96 to Rs. 7,10,547. The estimate for 1896-97 will be reduced from Rs. 7,30,000 to Rs. 7,00,000.

27. *Summary of Receipts.*—The total estimated revenue of 1896-97 is now estimated at Rs. 4,51,44,000, against Rs. 4,46,36,000 anticipated by the Government of India in March last, showing an improvement of Rs. 5,08,000, which is more than covered by the actual increase under Eastern Bengal State Railway receipts.

EXPENDITURE.

28. *Land Revenue.*—The original estimate under this head will be raised by Rs. 10,468 to meet the charges on account of the pay and establishment of the Deputy Collector in charge of the tea and waste lands settlements in Jalpaiguri, wrongly included in the original estimates under the Imperial head of Settlement charges, and by Rs. 4,035 for temporary establishment employed under the special officer deputed to check the *tauzi* accounts of the Shahabad Collectorate. The estimate will be raised from Rs. 37,29,000 to Rs. 37,43,000.

29. *Salt.*—The estimate under this head, amounting to Rs. 1,03,000, includes Rs. 50,000 for the creation of a preventive establishment for the protection of salt revenue outside Orissa. The scheme has not yet been approved by the Government of India, and there is no prospect of any establishment being appointed during the current year. The provision has therefore been struck out, and the estimate will now stand at Rs. 53,000.

30. *Excise.*—Since the budget estimate for 1896-97 was passed, a temporary establishment for one year has been sanctioned for the prevention of the smuggling of garjat ganja into the districts of Cuttack, Balasore, and Puri, at an estimated cost of Rs. 290 a month for salaries, Rs. 800 a year for travelling allowance, and of Rs. 120 for contingencies. A small increase in the establishment of the Stamp Department of the Calcutta Collectorate, the whole cost of which is charged against Excise under the rules of the Accounts Department, has been sanctioned, and the salaries of the Superintendent and the Assistant Superintendent of the Department have also been raised. It is also proposed to employ a new detective staff, under the Excise Commissioner, to check the smuggling of contraband opium and liquor to and from French Chandernagore, in place of the police force now abolished. In view of these facts, the total grant under this head will be raised from Rs. 7,11,000 to Rs. 7,18,000. The Provincial share will then stand at Rs. 1,79,000.

31. *Customs.*—The estimate under this head will be raised by Rs. 16,000 for the construction of a new steam-launch sanctioned for the Calcutta Customs House, and by Rs. 4,000, the immediate increase of salaries which is expected to be paid during the current year in consequence of the regrading of the ministerial establishment of the Calcutta Customs House, and the substitution of fixed pay for incremental salaries. A scheme for giving effect to these changes has been submitted to the Government of India. The total grant will stand provisionally at Rs. 8,22,000.

32. *Forests.*—The total grant under this head, amounting to Rs. 7,70,000, will be raised by Rs. 25,000 to meet the cost of preparing and delivering 30,000 sleepers to the Eastern Bengal State Railway. The Provincial share of the estimate will now stand at Rs. 3,97,000.

33. *Interest on ordinary debt.*—At the request of the Local Government, the Government of India have recently sanctioned an additional grant of one lakh under Class I of the Provincial Loans Account for advances to landholders for the excavation of tanks and wells. An additional provision of Rs. 2,000 will be required to meet the interest payable to the Imperial Government on this sum. The estimate will now stand at Rs. 2,38,000.

34. *Law and Justice—Courts of Law.*—The estimate under this head, amounting to Rs. 89,81,000, will be raised by Rs. 2,400 to meet the salary of an additional Munsif sanctioned since the passing of the budget, and by Rs. 5,000 on account of the increase in the pay of peons, for which a proposal has been submitted to the Government of India. The total estimate will therefore stand at Rs. 89,88,000.

35. *Police.*—The estimate under this head will be reduced by Rs. 3,000, the amount which has been transferred to the Public Works Department for certain minor works in police buildings, and by Rs. 1,294 in consequence of the abolition of the detective staff in the district of Hooghly, referred to in paragraph 30 above. Against these reductions some provision is necessary for the grant of station charge allowance to the officers in charge of certain town police-stations, and also for increase to the pay of peons, for which a general proposal has been submitted to the Government of India. On the whole, the grant will stand at Rs. 60,40,000, as originally sanctioned by the Government of India.

36. *Education.*—The estimate under this head, amounting to Rs. 27,76,000, will be raised by Rs. 12,500, granted for the promotion of scientific research, and reduced by Rs. 12,552 on account of the following transfers from this to other heads:—

	Rs.
(*a*) To Public Works Department for erecting two wings and erecting a gallery in the Chapra Zilla School ...	8,496
(*b*) For constructing an additional boarding-house in the Purulia Zilla School	628
(*c*) For the conversion of the south part of the compound of the Patna College into a cricket-ground	1,000
(*d*) For the completion of the work of additions and alterations to the Puri Zilla School building	790
(*e*) To the District Board of Bhagalpur for the erection of iron gates, with necessary pillars, &c., for the Bhagalpur Zilla School	1,638
	12,552

37. *Medical.*—The grant under this head will be raised by Rs. 1,704 on account of increase to the pay of peons, and by Rs. 2,500 promised to the Calcutta Municipality for M. Haffkine's method of inoculation against cholera. The estimate will thus be raised from Rs. 19,63,000 to Rs. 19,67,000.

38. *Scientific and other Minor Departments.*—An additional grant of Rs. 5,000 has been promised for improvements in the Royal Botanic Gardens, Calcutta, and a further sum of Rs. 5,000 for a third disintegrator in the Cinchona Factory. Against these additions the provision of Rs. 2,000, for the salary of a probationer gardener, will be reduced to Rs. 1,000 for the reasons stated in paragraph 12 above. The total grant will now stand at Rs. 4.58,000.

39. *Superannuation.*—The following table shows the Provincial charges under this head during the past six years:—

	Rs.	Increase. Rs.	Rs.
1890-91	15,13,000	.....	
1891-92	16,00,000	87,000	
1892-93	17,03,000	1,03,000	
1893-94	17,40,000	37,000	
1894-95	17,80,000	40,000	
1895-96	18,47,000	67,000	3,34,000

The increase during the last five years averaged Rs. 67,000 a year. The actuals in the first four months of the current year show an increase of Rs. 24,000, as compared with the payments during the same period of last year. The estimate will be raised from Rs. 18,90,000 to Rs. 19,07,000.

40. *Miscellaneous.*—The estimate under this head will be raised by Rs. 9,000, or from Rs. 2,47,000 to Rs. 2,56,000, to meet the increased charges of the Khedda establishment in Angul and Jalpaiguri.

41. *Irrigation—Minor Works and Navigation.*—An additional grant of Rs. 30,000 has already been sanctioned under this head for expenditure on the construction of two distributaries from the Eden Canal, a corresponding reduction being made in the grant of the Public Works Department for Provincial Civil Works. The estimate under this head will therefore stand at Rs. 18,33,000.

42. *Civil Works in charge of the Public Works Department.*—The grant for Provincial Civil Works for the current year was originally fixed at Rs. 43,00,000. It has since been reduced to Rs. 39,89,450 by the following additions and deductions:—

	Rs.	Rs.
Original grant		43,00,000
Add—	Rs.	
For erecting two wings and a gallery in the Zilla School at Chapra ...	8,496	
For constructing an additional boarding-house in connection with the Purulia Zilla School	628	
For converting the south part of the compound of the Patna College into a cricket-ground	1,000	
For additions and alterations to the Puri Zilla School building	790	
For transfer of Observatory buildings ...	1,491	
For minor works of the Police Department	3,000	
		15,405
Deduct—		
Amount transferred to the Irrigation Department	30,000	
Grants to District Boards for Provincial Civil Works	1,94,609	
Grants to District Road accounts for Provincial Civil Works	69,021	
Grants to District Road Funds for Provincial Civil Works	8,111	
Grants to the district of Angul for Provincial Civil Works	24,214	
		3,25,955
Net deduction ...		3,10,550

An additional grant of Rs. 6,703 will have to be made for percentage charges for establishment, tools and plant on the Imperial Civil and Military works transferred to the management of Local Funds in 1895-96, and a further sum of Rs. 33,800 will probably be required for the purchase of a building for the accommodation of the Watgunge Police force in Calcutta. An extra grant of Rs. 2,840 has also been sanctioned for providing tauzi desk in the Alipore Collectorate. The total grant will now stand at Rs. 40,33,000 in round numbers.

43. *Civil Works in charge of Civil Officers.*—It has been decided that the Public Works charges in the district of Angul shall be adjusted in the Civil Department, and a grant of Rs. 24,214 has already been made for expenditure in that district by a corresponding reduction in the grant of the Public Works Department for Provincial Civil Works. A grant of Rs. 2,455 has also been sanctioned for the construction of a coolie hospital at Demagiri. Against these additions, a saving of Rs. 10,000 will probably be effected in the provision of Rs. 50,000 made for grants to Excluded Local Funds and Municipalities. The total grant will now stand at Rs. 2,47,000.

44. *Contributions.*—The grant to Local Funds for the current year was originally fixed in January 1896 at Rs. 9,40,157. To this were added special grants amounting to Rs. 2,01,843, and the total was passed for Rs. 11,42,000 in the budget. The additional grants since made to these Funds amount to Rs. 3,06,944 as shown below, while Rs. 4,979 have been refunded by them as the unexpended balances of the grants made in the previous years:—

		Rs.
To Local Funds for	Imperial Works ...	18,302
	Provincial Works ...	2,87,430
	Irrigation Works ...	312
To District Board of Puri for Primary Education	...	900
	Total ...	3,06,944

These raise the total to Rs. 12,42,122. There are several applications pending for the restoration of the balances at credit of the Chaukidari Reward Funds, which were started as separate funds from the 1st April 1895. The transactions of these funds were formerly included in the Provincial account, and no separate balances were shown. The Accountant-General is in correspondence with the District Officers on the subject of the amount of these balances, and when this question has been settled, the amounts due, less any sums already paid as rewards in excess of local receipts, will be granted from the Provincial revenues. The claims of some District Boards for the unadjusted Government share of revaluation charges deducted from their cess collections have also been accepted. To meet these and other unforeseen demands, the estimate under this head will be placed at Rs. 13,16,000.

45. *Closing balance.*—According to the estimates passed by the Government of India, it was expected that the year would close with a balance of Rs. 34,40,000. According to the estimates now adopted, the closing balance will be Rs. 41,86,000.

PART IV.

Working of the Provincial Contract of 1892.

46. The current contract is based upon the assumption that, taking one year with another, the sum required by the Government of Bengal to meet the reasonable demands of the Province on heads of expenditure classed as Provincial is Rs. 4,07,91,000; and as the average annual income was estimated by the Supreme Government, in March 1892, at Rs. 4,22,30,000, the difference of Rs. 14,39,000 is the sum which the Local Government has to contribute to the Imperial Exchequer every year, the Province being thus left with an estimated income and expenditure exactly equal. The receipts under some heads are credited entirely to Provincial revenues, while the revenue under others is shared in varying proportions by the Imperial and Local Governments. The same system is applied to heads of expenditure, the general principle

being observed (with a few exceptions) that the proportion of receipts and of expenditure made over to the Local Government should be the same.

47. On the receipt side of the account, the Provincial Government gets the whole of the following items:—Twelve per cent. on the land-revenue collected from Government estates; rents of Salt Warehouses, fines and other minor receipts of the Salt Department; Provincial Rates; minor Customs receipts; interest on local loans; receipts from Courts of Law, Jails, Police, Marine, Education, Medical, Botanic Gardens, Cinchona, Fairs, and Emigration, and receipts in aid of superannuation; also receipts from Stationery and Printing, except the value of supplies to Railways and local bodies, and all receipts from Irrigation, Navigation, and Civil Works. It receives one-half of Assessed Taxes, Forest and Registration receipts, and of the net earnings of the Eastern Bengal Railway system after deducting the working expenses; one-fourth of Excise and Land-Revenue heads, and three-fourths of the important head of Stamps.

48. On the expenditure side the Government of Bengal is required to meet all charges under the head of Land-Revenue, except Survey and Settlement; the Government share of expenditure on Provincial Rates, and all expenditure under the transferred heads of Customs, Salt, and Interest; also charges arising under the heads Courts of Law, Jails, Police, Marine, Education, Medical, and, with certain exceptions, Political; the whole of Scientific and Minor Departments, except Census, Ancient Manuscripts, and certain Veterinary charges; the whole of Stationery and Printing, except purchases of stationery for central stores; working expenses of Irrigation and Navigation Canals, and Civil Works, with the exception of Imperial Buildings. It is also responsible for one-half of the expenditure under Assessed Taxes, Forest, and Registration, for three-fourths of Stamp expenditure, and a quarter of Excise.

49. Concurrently with the settlement of this contract, the general rules regulating Provincial finance were republished with the modifications they had undergone up to date, and it was also laid down that, if any considerable charge of an exceptional nature, which ought ordinarily to be borne by one Province, were paid in another Province, the question of a corresponding adjustment between the two would be specially dealt with. This latter provision was rendered necessary by the decision to stop inter-provincial adjustments. It was further arranged that on the score of the technical character of the work and the necessary uniformity in the working of all State Railways, the Provincial Government should not exercise any administrative or financial powers in regard to the Eastern Bengal State Railway; but that in order to provide for the construction of feeder roads and the general development of communication in the tracts served by the railway, half the net earnings should be Provincial; that the capital expenditure required to complete the Hijili Canal should be advanced on certain terms from Imperial funds; that the expenditure on Survey and Settlement operations during the term of the contract, being in its nature liable to great variations, and difficult to reduce to a uniform yearly average, should be met by Imperial revenues; and lastly, that if the recoveries on account of the Survey and Settlement operations in Bihar should fall short of the expenditure which is recoverable from the zamindars and raiyats, the difference should be charged to Provincial revenues.

50. The following statements illustrate the progress of the Provincial receipts and expenditure during the five years from 1892-93 to 1896-97:—

Revenue.	Actuals, 1892-93.	Actuals, 1893-94.	Actuals, 1894-95.	Approximate actuals, 1895-96.	Revised estimate, 1896-97.

51. According to the above statement, the Provincial revenues have increased from Rs. 4,24,45,566 in 1892-93 to Rs. 4,32,78,325 in 1893-94, Rs. 4,46,23,191 in 1894-95, Rs. 4,58,27,096 in 1895-96, and Rs. 4,51,44,000 in 1896-97; while the expenditure on all accounts in each year has been Rs. 4,25,43,825, Rs. 4,29,09,459, Rs. 4,29,25,233, Rs. 4,43,59,943 and Rs. 4,67,47,000, respectively.

52. It would be misleading, however, to say that the revenue during the five years has increased from Rs. 4,24,45,566 to Rs. 4,51,44,000, or by Rs. 26,98,434, while the expenditure has risen from Rs. 4,25,43,825 to Rs. 4,67,47,000, or by Rs. 42,03,175, during the same period. Nearly one-half of the difference (Rs. 15,04,741) between the increase in receipts and the increase in expenditure is due to a new charge imposed on the Provincial revenues, in consequence of the payment of exchange compensation allowance sanctioned by the Secretary of State with effect from 1st April 1893, for which no corresponding assignment has been received from the Imperial revenues. There are other disturbing elements which vitiate any comparison of the total transactions of one year with those of another. Thus the reimposition of the import duties from 1894-95, and the consequent increase of Customs establishments, have swollen both sides of the account, for although the Province has no share in the duties reimposed, it has obtained an additional assignment to meet the cost of collecting them. Again, the special contribution of 3 lakhs made to the Imperial revenues in 1894 95, and its restoration to Provincial in the following year, affected the receipts of those years. Lastly, the contribution of 2 lakhs made to the Port Commissioners of Calcutta in 1896-97 for payment of deferred interest due by them on account of the Kidderpore Dock loans, referred to in paragraph 12 above, has reduced the total revenues of that year by adding 2 lakhs to the minus head of land-revenue adjustments. The fluctuations of exchange have also affected the exchange compensation allowance during the last four years it has been paid, to the extent shown in the following table:—

	Actuals, 1893-94.	Actuals, 1894-95.	Actuals, 1895-96.	Estimate, 1896-97.

Total Normal Expenditure	4,24,05,000	4,23,56,000	4,17,44,000	4,28,46,000	4,51,52,000
Total deduction for special expenditure including expenditure on railways	1,39,000	78,000	2,60,000	5,71,000	7,76,000
GRAND TOTAL	4,25,44,000	4,29,09,000	4,20,25,000	4,43,60,000	4,64,47,000

Deducting then these accidental elements, it will be seen from the statement above that the normal revenue of the Province amounted to Rs 4,38,47,000, Rs. 4,47,25,000, Rs. 4,61,78,000, Rs. 4,65,62,000, and Rs. 4,65,19,000; while the total charges, excluding elements not contemplated at the commencement of the contract, were Rs. 4,24,05,000, Rs. 4,23,56,000, Rs. 4,17,44,000, Rs. 4,28,46,000, and Rs. 4,51,52,000. The increase under receipts of nearly 9 lakhs in 1893-94 is made up of 3½ lakhs under Stamps, 1½ lakhs under Excise, and 4¼ lakhs under Railways; while that of 14½ lakhs in 1894-95 includes 5½ lakhs under Stamps, 1 lakh under Excise, 1 lakh under Assessed Taxes, 1½ lakhs under Miscellaneous, and 8 lakhs under Railways, against a decrease

of 3 lakhs under Provincial Rates. The increase of nearly 4 lakhs in 1895-96 is wholly under Principal heads of revenue, especially under Excise. The reduction in the current year is nominal. The charges fell from Rs. 4,24,05,000 in 1892-93 to Rs. 4,23,56,000 in 1893-94 and to Rs. 4,17,44,000 in 1894-95. The decrease of 6 lakhs in 1894-95 is made up of 3½ lakhs under Provincial Rates, owing to a change in the mode of adjusting the cost of collecting the road cess mentioned in paragraph 60 below; of nearly 1½ lakhs under Stationery and Printing, and 1 lakh under Irrigation. The increase in expenditure of 11 lakhs in 1895-96 is made up of 2½ lakhs under Jail Manufactures, 1 lakh under Police for the improvements recommended by the Police Commission, 1 lakh under Cinchona Plantations, 1 lakh under Irrigation Minor Works owing to the transfer of the suspense balances of the Brahmini-Baitarni Division from Major Works Imperial to this head, and 6 lakhs for increased expenditure on Civil Buildings and Roads. The further increased provision of 23 lakhs made in the estimates of the current year is due to additional grants to the Forest Department for the supply of sleepers to the different railways, larger grants to the civil departments for expenditure of a nature which must increase with the natural development of the administration, and for increased grants to the Irrigation and Public Works Departments for increased expenditure on the maintenance of canals and for the construction of new buildings and roads. The more liberal provision for civil works during the last two years, though still falling short of the full requirements of the Province, makes up to some extent for the severe economy imposed by the financial necessities of the preceding three years.

54. *Land Revenue.*—The receipts from Land Revenue Proper have been as follows:—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
Gross Land Revenue	3,84,96,092	3,87,14,322	3,89,09,419	3,90,49,438	3,90,98,000
Deduct 12 per cent. on estimated collections from Government estates (Provincial)	4,73,600	4,78,504	4,84,106	5,02,365	4,90,000
Deduct realisations on account of Bihar survey and settlement charges (Imperial)	...	8,023	512	22,692	3,51,000
Total deduction ...	4,73,600	4,86,527	4,84,618	5,25,057	8,41,000
Net amount divisible between Imperial and Provincial funds	3,80,22,492	3,82,27,795	3,84,24,801	3,85,24,381	3,82,57,000
Provincial share of above (one-fourth)	95,05,623	95,56,949	96,06,200	96,31,095	95,64,000
Add 12 per cent. collections	4,73,600	4,78,504	4,84,106	5,02,365	4,90,000
Total Provincial share ...	99,79,223	1,00,35,453	1,00,90,306	1,01,33,460	1,00,54,000

The increase in gross Revenue in 1893-94 over that of 1892-93 was chiefly due to the increased collection of fixed revenue in the districts of Purnea, Gaya, Puri, Champaran and Jalpaiguri, and to a special receipt of Rs. 30,000 in Chittagong from sale of timber in Government estates. The increase in 1894-95 was due chiefly to larger receipts from the sale of leases under the new waste land lease rules. The current demand on account of the land revenue of the Lower Provinces for the past five years is shown in the following table:—

Class of Estates.	1891-92.	1892-93.	1893-94.	1894-95.	1895-96.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
I.—Permanently-settled estates	3,22,47,951	3,22,63,793	3,22,65,896	3,22,61,833	3,22,62,525
II.—Temporarily-settled ditto	26,76,096	27,10,013	28,10,713	28,21,530	26,35,046
III.—Estates held direct by Government	32,38,128	33,97,627	34,08,777	34,84,498	35,25,890
Total ...	3,81,62,175	3,83,72,333	3,84,85,386	3,85,67,851	3,86,43,461

The current demand, which is the real test whether the land revenue of a province is progressing, increased every year, partly under temporarily-settled

estates, but mainly under estates held direct by Government. The increase is due to the re-settlement of Government estates, the revision of khas maha rent-rolls, and the transfer of estates to class III.

55. The details of the *adjustments* between the Imperial and Provincial accounts effected through the Land Revenue head, are shown below:—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.

* As has been explained in paragraph 46 above, the Provincial Government pays a yearly contribution of Rs. 14,39,000 under the terms of the contract with the Government of India. A special contribution of 3 lakhs was made to the Imperial Treasury in 1894-95, and was repaid to Provincial in the next year. The Government of India having now decided to remit four lakhs of deferred interest on the Kidderpore Dock loan, half of this sum has been shown as a credit from Provincial to Imperial under the head of Land Revenue adjustments. The Board of Revenue, Bengal, having in 1892 prohibited the importation of Shahjehanpur rum into Bengal, except under bond, the Government of the North-Western Provinces and Oudh claimed compensation, and Rs. 52,084 was transferred to the Imperial Revenues on this account in 1893-94. Under the terms of the contract, the Government of India have advanced the amounts required yearly for capital expenditure on remodelling the Hidgili Tidal Canal, and the Provincial Revenues pay interest on these amounts. After the contract had been concluded, the maintenance, repairs and construction of certain Imperial Civil and Military buildings were transferred to local agencies, with suitable grants from Imperial Revenues; but as these grants pass through the Provincial account, they are recorded under the adjusting heads of Land Revenue on the receipt side and "Contribution from Provincial to Local" on the expenditure side. The Secretary of State having

decided that a probationer gardener should learn work at the Sibpur Royal Botanic Gardens before being appointed in a permanent post, the Government of India agreed to meet the charges for his salary from the Imperial Revenues. Up to 1895-96 the Imperial Marine Department used to bear the charges for towing the yacht *Rhotas* while His Honour the Lieutenant-Governor was on tour, but from that year the charge has been Provincialized and debited to the Provincial Marine Budget, an assignment of Rs. 10,000 a year having been made from the Imperial Revenues. Mr. Kilby, the late Superintendent of the Preventive Service and the Sulkea Salt Golahs, having invented a patent scale for the weighment of salt, an honorarium of Rs. 75,000 was granted to him with the sanction of the Secretary of State, and the charge was divided between Imperial and Provincial Revenues. A portion of the Lebong spur, called Mackillop's Hill, was purchased by the Local Government at a cost of Rs. 11,000, but the land was afterwards required for the Lebong Cantonment, and the Supreme Government agreed to restore the amount from the Imperial Revenues. Under the orders of the Government of India in the Public Works Department, certain 2nd and 3rd-class Meteorological Observatory buildings have been transferred from the charge of the Meteorological Reporter of the Government of India to the charge of the Provincial Public Works Department, and an assignment of Rs. 1,491 has been given from the Imperial Revenues to meet the charge.

56. The expenditure charged under Land Revenue, which is wholly Provincial (except the charges for survey and settlement, which are Imperial), has risen from Rs. 33,76,419 in 1892-93 to Rs. 37,43,000 in 1896-97. The details are as follows :—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.
1	2	3	4	5	6
	Rs	Rs.	Rs.	Rs.	Rs.
(1) Charges of district administration ...	29,48,391	30,45,679	31,11,712	31,79,836	32,42,000
(2) Management and improvement of Government estates	3,54,007	4,02,864	3,77,089	4,51,073	4,20,000
(3) Land Records and Agriculture ...	74,021	80,959	79,333	95,773	81,000
Total ...	33,76,419	35,29,502	35,68,127	37,26,732	37,43,000

The increase under (1) was due to the payment of exchange compensation allowance and also to additional establishment being required in the partition and certificate departments. The further increase in 1896-97 is mainly due to a special provision of Rs. 50,000 for the purchase of a sea-going vessel for the Commissioner of the Sunderbans. The increase under (2) in 1893-94 was for increased outlay on improvements, and the large increase in 1895-96 was caused by this expenditure being for the first time adjusted under Land Revenue instead of under Irrigation Minor Works. The increase of expenditure under (3) is for the payment of a local allowance of Rs. 250 per mensem to the Director of Land Records and Agriculture, sanctioned by the Secretary of State in his Despatch dated the 10th May 1894. The reduced charges in 1896-97 are accounted for by a portion of the cost of the settlement branch of the Director's Office being separately provided for under Bihar Settlement Operations.

57. *Salt.*—In 1893-94 the price of salt rose, and large amounts were cleared from the golahs, thus reducing the Provincial receipts from rent. This rise of price led to large importations in the following year when all the space available was taken up; while from 1894-95 onwards the attempt to monopolise the golahs and form a corner in salt rendered it necessary to store salt at the Kidderpore Docks. The continued rise in the provincial receipts from this source has thus far falsified the opinion that the transfer of salt business from sailing ships would obviate the necessity of keeping large stocks in the golahs.

On the expenditure side a special payment of Rs. 75,000 was made to Mr. Kilby in 1892-93 as an honorarium for his patent scales, and the charges in that year amounted to Rs. 1,24,595. Half of this was, however, paid from

Imperial Revenues, and adjusted under Land Revenue, as stated in paragraph 55 above. A sum of Rs. 19,056 was paid to the East Indian Railway Company in 1892-93 for the extension of a siding inside the Sulkea golah premises. In 1893-94 there was no expenditure on special objects, nor on the purchase of salt scales, and the total amounted to Rs. 26,838 only. The actual charges in 1894-95 came to Rs. 52,220, and it included Rs. 11,106 for the salary and allowance of Mr. Ashton, of the Northern India Salt Department, who was deputed to enquire into the illicit manufacture of salt in Bengal. Additional expenditure was also incurred in that year in the construction of temporary storage room at Sulkea, and hire of sheds at the Kidderpore Docks for the bonding of salt, to supplement the accommodation available at the permanent golahs.

58. *Stamps.*—Under the head of *Stamps* the development of the revenue has been steady and continuous. The total receipts which had risen from Rs. 1,31,16,000 in 1885-86 to Rs. 1,51,00,000 in 1891-92, again rose to Rs. 1,67,72,000 in 1895-96, and are estimated at Rs. 1,68,00,000 for the current year. The Provincial share of these receipts was Rs. 1,13,25,000 in 1891-92, Rs. 1,16,59,000 in 1892-93, Rs. 1,19,83,000 in 1893-94, Rs. 1,25,27,000 in 1894-95 and Rs. 1,25,79,000 in 1895-96, and is estimated at Rs. 1,26,00,000 for 1896-97. The increase has therefore been 3⅓ lakhs in the first year, 6⅔ lakhs in the second, 12 lakhs in the third, 12½ lakhs in the fourth and 12¾ lakhs in the fifth, or a total increase of 47 lakhs in five years. This has occurred both under general stamps and court-fee stamps. The increase of revenue under the former class has been most marked under impressed stamps, and can only be assigned to the general expansion of trade, the increased value of land, and the desire of the people to have their transactions recorded in documents which can be used for litigation. The improvement under the latter class is attributed partly to increase in the number of civil and rent suits instituted, and partly to larger receipts on account of probate duty.

On the expenditure side the total charges rose from Rs. 5,95,555 in 1892-93 to Rs. 6,31,706 in 1893-94, Rs. 6,52,557 in 1894-95, Rs. 6,55,903 in 1895-96 and Rs. 6,67,000 in 1896-97. The charges for stamp paper supplied from the central stores fluctuate according to requirements, while the charges for the sale of stamps have increased with the growth of the revenue.

59. *Excise.*—During the period of the present contract, the revenue under this head has shown a steady and continuous development, as will be seen from the following table:—

	1892-93.	1893-94.	1894-95.	1895-96.	1896-97 (revised estimate).
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
(*a*) License and distillery fees and duties on the sale of liquors and drugs.	87,68,798	91,35,050	96,23,678	1,01,38,025	Details not available.
(*b*) Gain on sale-proceeds of excise opium.	16,09,420	16,42,103	16,88,952	17,72,313	
(*c*) Duty on ganja ...	12,05,829	13,57,855	12,37,953	14,54,286	
(*d*) Fines, confiscations and miscellaneous.	10,537	13,157	11,767	13,873	
Total ...	1,15,94,584	1,21,48,165	1,25,62,350	1,33,78,497	1,35,00,000
Provincial share (one-fourth)	28,98,646	30,37,041	31,40,587	33,44,624	33,75,000

The increase under head (*a*) has been due partly to the competition for excise shops and partly to the enhancement of the duty on wholesale licenses for the vend of imported liquor in the town of Calcutta. The increase under head (*b*) is attributable to larger consumption, and that under (*c*) to the orders

raising the duty on all kinds of ganja by Re. 1 per seer, with effect from April 1893.

Classified according to articles, the revenue has been as follows in the past five years:—

Articles of Excise.	Revenue.				
	1891-92.	1892-93.	1893-94.	1894-95.	1895-96.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
Country spirits	48,14,643	50,30,143	52,52,898	55,61,516	59,11,840
Rum	2,20,972	4,19,717	4,35,308	4,33,227	4,66,296
Imported liquors	2,23,644	2,07,092	2,33,102	2,81,588	2,87,995
Beer	174	193	224	528	485
Tari	9,57,405	9,50,379	10,16,375	9,97,852	10,24,031
Pachwai	3,04,168	3,34,557	3,46,518	3,52,336	4,39,284
Charas	7,568	9,097	10,776	15,898	17,985
Siddhi, sabzi, or bhang	48,164	53,558	55,782	55,394	59,498
Majum	1,962	1,984	2,069	2,119	1,710
Madak	86,343	79,689	78,379	89,489	77,332
Chandu	35,332	31,032	24,476	29,624	30,380
Spirits used for arts	772	1,066	337	390	1,097
Ganja	22,92,508	23,80,066	25,35,045	24,92,755	26,80,819
Opium	21,18,825	20,85,685	21,34,867	22,13,721	23,65,198
Miscellaneous	7,973	10,413	10,910	12,468	14,120
Total as in departmental books	1,11,20,813	1,16,00,621	1,21,37,096	1,25,67,855	1,33,77,980
Adjustments	+4,153	−6,037	+11,069	−5,505	+517
Total in Accountant-General's books	1,11,33,966	1,15,94,584	1,21,48,165	1,25,62,350	1,33,78,497

The receipts from country spirits have continued to advance steadily, and now make up 44·3 per cent. of the total excise revenue. Hemp drugs come next with a percentage of 21·3, followed by opium and its preparations (18·1), tari (8·1), rum (3·3), pachwai (3·1), and imported liquors (1·7). Calculated on the population ascertained at the census of 1891, and allowing for natural increase of population at the rate of 7 per thousand per annum, the average incidence of the excise revenue was 2 annas and 11 pies per head against 2 annas 9 pies in 1894-95, while during the latter year the incidence in Bombay was 8 annas 7 pies and in Madras 6 annas 2 pies per head of the population recorded at the last census. The settlements of the licenses for the current year have again been favourable, the fees showing a net increase of Rs. 2,32,807, which is shared by all Divisions except Chittagong and Patna.

The charges of the Excise Department declined in the first three years of the contract, but for the current year an increased provision has been made to provide for the cost of uniforms for the detective staff, and also for possible changes in the system of taxing tari. The estimate for the current year stands at Rs. 1,79,000 (Provincial share).

60. *Provincial Rates.*—The head Provincial Rates, which is wholly at the disposal of this Government, consists of—

	1892-93.	1893-94.	1894-95.	1895-96.	Estimate, 1896-97.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
(a) Public Works Cess	41,33,833	41,34,309	41,78,695	41,36,965	41,80,000
(b) Proportionate cost of collecting road cess ...	5,44,135	5,47,201	.....	.....	.....
(c) General management of private estates	76,889	1,31,551	1,28,984	1,37,488	1,40,000
Total	46,16,267	48,13,061	43,07,679	43,74,453	43,20,000

The variations under (*a*) were due partly to the varying proportions of the demand collected, and partly to the enhancement of the demand by the revaluation of districts. Up to 1893-94 the cost of collecting the road cess was included in the Provincial account, a credit *per contra* being taken on the receipt side for the recovery of such cost from the District Funds. This charge, however, is now debited direct to those funds, so that from 1894-95 there has been no receipts under (*b*). The increase under (*c*) has resulted from the revised rules enhancing the rates levied for the management of private estates under Act X of 1892.

61. *Customs.*—The increase in receipts under this head was in demurrage and weighment fees, and that in expenditure is partly for the payment of exchange compensation allowance, but chiefly for the additional establishments employed in consequence of the new Tariff Acts.

62. *Assessed Taxes.*—The head *Assessed Taxes* represents the receipts from the income-tax, which are divided equally between the Provincial and Imperial Revenues. The Provincial share of the receipts amounted to Rs. 21,18,982 in 1892-93, Rs. 21,75,207 in 1893-94, Rs. 22,81,635 in 1894-95, Rs. 23,30,040 in 1895-96, and Rs. 23,75,000 (revised estimate) for 1896-97. The increase is due to the general revision and enhancement of assessments, specially in towns and centres of trade, to the development of the mining industry, to great activity in the building trade in Darjeeling, and to fluctuations in the profits of the jute trade from year to year.

63. *Forests.*—Under the head of *Forests*, figures of gross receipts are misleading, as the revenue of any year must depend largely on the expenditure of that year and *vice versâ*. The following figures compare the net revenue in each year:—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts ...	7,44,882	8,01,611	7,95,673	9,18,709	13,30,000
Charges ...	3,81,292	4,03,929	3,97,394	4,66,068	7,95,000
Net revenue ...	3,63,590	3,97,682	3,98,279	4,52,641	5,35,000
Provincial share ...	1,81,795	1,98,841	1,99,139	2,26,321	2,68,000

The increase of Revenue in the Forest Department in the last two years of the contract period is due to the supply of sleepers to the East Coast Railway, to the Rai-Bareilly-Benares Railway and to the Eastern Bengal State Railway.

64. *Registration.*—The following table shows the operations of the Registration Department:—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts ...	14,33,801	13,89,137	13,56,504	13,41,492	13,80,000
Charges ...	7,26,203	7,85,497	8,05,360	8,02,542	8,59,000
Net revenue ...	7,07,598	6,03,640	5,51,144	5,38,950	5,21,000
Provincial share ...	3,53,799	3,01,820	2,75,572	2,69,475	2,60,000

The decrease in receipts is due to the reduction of the minimum *ad valorem* fee on documents not exceeding Rs. 50 in value, from 12 annas to 8 annas only, which took effect from the 1st July 1893. It was anticipated that, notwithstanding the reduction in the fee, the loss in the receipts would be recouped by an increase in the number of registrations. This expectation has not been quite fulfilled, as the receipts fell from Rs. 14,33,801 in 1892-93 to Rs. 13,41,492

in 1895-96, although the number of registrations increased from 1,102,321 to 1,144,508 during the same period. The large falling off in 1895-96 may also be ascribed to the better harvest of the year and the consequent diminution in the number of transactions for raising money. Some revival appears to have taken place in the first four months of the current year, as the receipts in these months show an increase of Rs. 36,000 on the receipts of the corresponding period of last year. The charges of the department have, however, risen with the increase in the number of offices, although the average expenditure per office has decreased from Rs. 2,153 in 1893-94 to Rs. 2,094 in 1894-95 and Rs. 2,024 in 1895-96. A further rise is expected owing to the opening of new offices for the maintenance of Land Records under Act III (B.C. of 1895.

65. *Interest.*—The actual receipts under this head amounted to—

	1892-93.	1893-94.	1894-95.	1895-96.	Estimate, 1896-97.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
Class I.—Interest on advances under Land Improvement Loans Act and under Agriculturists' Act	26,576	31,736	26,439	23,344	24,000
Class II.—Interest on drainage and embankment advances	4,367	1,299	33,540	34,746	40,000
Class III.—Interest on loans to landholders and other notabilities	17,637	21,162	23,414	21,809	5,000
Class IV.—Interest on loans to Municipal and other public Corporations (excluding Presidency Corporations) ...	28,726	24,644	65,799	82,833	1,41,000
Total	77,306	78,861	1,49,192	1,62,732	2,10,000
Interest on Government securities	12,704	12,672	14,256	11,654	11,000
Miscellaneous	52,560	46,654	40,339	38,609	46,000
Grand total ...	1,42,570	1,38,187	2,03,787	2,12,995	2,67,000

The charges under this head represent the payments made to Imperial Revenues on the amounts advanced by the Government of India, the interest being calculated at 4 per cent. on the mean balance outstanding at the close of every year. The loss to the Provincial Government under the Provincial Loans Account scheme amounts to Rs. 1,86,002 in five years as shown below :—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.	Total.
1	2	3	4	5	6	7
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts	77,306	78,861	1,49,192	1,62,732	2,10,000	6,78,091
Charges	1,21,599	1,43,259	1,69,463	1,91,772	2,39,000	8,64,093
	44,293	64,398	20,271	29,040	29,000	1,86,002

The gradual increase on the charge side is due to the larger mean balance outstanding at the close of each succeeding year. It is expected that the loss to the Provincial Government will be recouped when the drainage and embankment works, for which large advances have been made, are completed, and the interest now deferred is recovered along with the instalments of the capital sums advanced from the zamindars and others who are benefited by the work.

66. *General Administration.*—The charges under this head have risen from Rs. 16,36,512 to Rs. 17,09,000, which is mainly due to the payment of exchange compensation allowance as shown below :—

	1892-93.	1893-94.	1894-95.	1895-96.	Estimate, 1896-97.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
Total charges	16,36,512	17,04,753	17,20,501	17,49,026	17,09,000
Exchange compensation allowance	...	49,228	90,000	93,863	81,000
	16,36,512	16,55,525	16,30,501	16,55,163	16,28,000

Excluding the charges for compensation allowance, the increase in 1893-94 was due partly to the payment in this Presidency of the salary of the Chief Commissioner of the Central Provinces while on leave, and partly to the leave allowances of His Honour the late Lieutenant-Governor, Sir Charles Elliott. The increase in 1895-96 was due to the cost of a new steamer constructed for the Commissioner of the Chittagong Division, and to the adjustment of the salaries and contingencies of the Secretariat Book Depôt, under the head of Civil Secretariat, to which it had been transferred from the Secretariat Press.

67. *Law and Justice—Judicial Courts.*—The receipts in 1891-92 amounted to Rs. 8,81,017, but during the five years following, they varied as follows:—Rupees 8,68,395 in 1892-93, Rs. 8,96,595 in 1993-94, Rs. 8,72,850 in 1894-95, Rs. 8,41,219 in 1895-96, and Rs. 8,30,000 (revised estimate) for 1896-97. These receipts are of a fluctuating character, and consist mainly of magisterial fines, which, except in 1893-94, show a gradual falling off. The details of the charges under this head are shown below:—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
(*a*) High Court	11,24,598	11,47,961	11,76,880	11,18,722	11,71,000
(*b*) Law Officers	2,79,465	3,00,790	3,03,365	3,06,579	3,10,000
(*c*) Coroner's Court ...	12,805	13,014	13,584	10,930	14,000
(*d*) Presidency Magistrate ...	63,581	62,893	65,758	66,717	65,000
(*e*) Civil and Sessions Courts	44,75,646	46,28,537	46,77,125	46,54,414	46,67,000
(*f*) Courts of Small Causes ...	1,79,820	1,67,943	1,71,553	1,74,376	1 75,000
(*g*) Criminal Courts ...	22,46,447	23,49,220	23,61,977	23,74,910	24,43,000

(*i*) Refunds	1,31,885	1,41,234	1,29,935	1,07,245	1,30,000
Total ...	85,21,933	88,19,530	89,10,389	88,25,616	89,88,000
Deduct—Charges for Exchange Compensation Allowance	...	1,60,449	3,02,000	2,96,987	2,53,000
	85,21,933	86,59,081	86,08,389	85,28,629	87,35,000

Excluding Exchange Compensation Allowance, the increase since 1893-94 under (*b*) was for fees to pleaders in criminal cases, while that under (*e*) was for additional Munsifs and their establishment, and for larger payments on account of remuneration to copyists.

68. *Jails.*—The receipts and charges of the Jail Department are shown below:—

	1892-93.	1893-94.	1894-95.	1895-96.	Estimate, 1896-97.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts ...	9,13,136	8,08,117	8,52,066	8,57,187	8,58,000
Charges—					
Ordinary ...	14,08,045	14,55,589	14,92,819	14,75,482	15,51,000
Manufacture ...	7,05,487	6,19,889	5,14,706	7,82,905	6,85,000
Total Charges ...	21,13,532	20,75,478	20,07,525	22,58,387	22,36,000

The receipts of the Jail Department mostly depend on the demand for its manufactures, and the expenditure on raw materials fluctuates accordingly. The variations in the ordinary charges of the jails depend partly on the strength of the jail population from time to time, and partly on the prices of food-grains purchased for the prisoners. In the estimates for the current year provision has been made for increased expenditure on hospitals, sanitation, bedding and clothing of patients, as well as for the purchase of live-stock and tools and plant.

69. *Police.*—The receipts of the Police Department rose from Rs. 2,41,518 in 1892-93 to Rs. 2,43,600 in 1893-94, but have fallen since then to Rs. 2,36,677 in 1894-95, Rs. 1,89,891 in 1895-96, and Rs. 1,80,000 in 1896-97. The decrease in 1894-95 was attributed to smaller recoveries from the Frontier Police for supply of rations. Fines under the Village Chaukidari Act have been transferred from Provincial to Local accounts on the creation of the District Chaukidari Reward Fund with effect from the 1st April 1895, and this accounts for the decrease in the receipts of the years 1895-96 and 1896-97. On the expenditure side the actual charges amounted to Rs. 58,45,645 in 1892-93, Rs. 55,92,975 in 1893-94, Rs. 59,04,351 in 1894-95, Rs. 60,38,648 in 1895-96, and are estimated at Rs. 60,40,000 for 1896-97. The details are as follows:—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate 1896-97.
1	2	3	4	5	6

Total ...	58,45,645	55,92,975	59,04,351	60,38,648	60,40,000

Excluding Exchange Compensation Allowance, the increase under (*a*) in 1893-94 is due to larger outlay on account of hospital charges and arrear payments of contribution to the Port Commissioners of Calcutta for River Police. The increase in the last two years is due to the increase in the number of police guards sanctioned. The expenditure under (*b*) Municipal Police represents the Howrah Municipal Police charges, three-fourths of which is paid from Provincial Revenues, and the balance being borne by the Municipality. In the estimates of the current year the grant has been raised from Rs. 37,000 to Rs. 45,000, in order to relieve the Municipality of police charges to the extent of Rs. 8,000 to meet a portion of the sinking fund of the Howrah water-works loan. The increase under District Executive Force (*d*) is due to the expenditure involved in gradually giving effect to the recommendations of the Police Commission, which are summarised as follows:—

		Rs.
(1)	Raising the pay of constables from Rs. 6 to Rs. 7 in the five Divisions of Burdwan, the Presidency, Rajshahi, Dacca and Chittagong	49,098
(2)	Granting recruits free kits on joining	43,566
(3)	Increase of clothing allowance	21,219
(4)	Stopping deductions from pay towards Superannuation Fund	57,534
(5)	Granting special allowances to a prosecuting agency ...	21,120
(6)	Ditto allowances for the charge of a police-station ...	1,53,240
(7)	Ditto pony allowances to investigating officers ...	25,020
(8)	Increasing the number of sub-inspectors by reducing that of head-constables	2,82,484
(9)	Increasing the number of constables	50,343
(10)	Reorganization of the non-investigating police ...	30,338
	Total ...	7,33,962

Complete effect has already been given to the first six recommendations, and the rest have been partially carried out except the seventh, which the Inspector-General of Police desires to leave in abeyance for the present. The substitution of inspectors for head-constables, as investigating officers, is to be gradually carried out in ten years by increased annual allotment of Rs. 28,206. The Lieutenant-Governor has decided to spend on item No. 9 a further sum of Rs. 28,678, so that the total amount sanctioned is Rs. 79,021. Under item No. 10, a reduction of Rs. 2,115 has been made, and the total stands at Rs. 28,225. The net result is that out of the estimated additional annual cost of Rs. 7,33,962, which the recommendations of the Commission involve, the Government of Bengal has already sanctioned the expenditure of Rs. 5,37,521. An additional force, consisting of one inspector, five head-constables and 26 constables, has been sanctioned for duties in connection with the mills on the left bank of the river Hooghly. A school for the training of sub-inspectors has been opened in Bhagalpur The charges under Village Police depend on the amount of rewards paid, which were large in 1894-95, but since 1895-96 these payments have been entered in the local funds accounts. The charges on account of transport and rations for the Lushai Special Police were unusually high in 1892-93. In 1894-95 the charges on account of the Bengal Military Police were higher than in the previous year, chiefly on account of the recruitment of a new Military Police guard for service at Gnatong, sanctioned at the latter part of the year. In the year 1895-96 the Military Police companies at Dacca, Bhagalpur and Dumka were reorganized. The estimated charges for Angul Frontier Police have, for the first time, been shown under Special Police in 1896-97. The increase under "Railway Police" is due to the increase of police guards and constables sanctioned on the East Indian and Bengal and North-Western Railways and on new extensions.

70. *Marine.*—Under *Marine* the chief receipts are pilotage fees of vessels entering and leaving the Hooghly; the main heads of charges being the payment made to pilots, the cost of pilot vessels and their repairs, and of the Calcutta Port Officer and his establishment. The receipts are of a fluctuating nature, as they depend on the tonnage of vessels visiting the port. The total charges amounted to Rs. 9,44,397 in 1892-93, Rs. 9,41,139 in 1893-94, Rs. 8,93,093 in 1894-95, Rs. 8,73,766 in 1895-96, and are estimated at Rs. 9,21,000 for 1896-97. The charges for 1892-93 included Rs. 99,306, and those for 1893-94 Rs. 1,26,319, for the cost of the new pilot vessel *Alice* constructed in Bombay to replace the *Coleroon*. Additional charges were incurred in 1894-95 for salaries, allowances, and victuals of officers and men afloat on account of the new vessel. In the estimates for the current year, special provision has been made for the repairs of the *Rhotas* and for the hire of a steamer for towing the *Rhotas* for the Lieutenant-Governor's tour This charge has now been provincialized with an assignment of Rs. 10,000 from the Imperial Revenues, with effect from the year 1895-96. The contributions made to the Orissa Port Funds from the Provincial Revenues have been—

	Rs.
1892-93	15,000
1893-94	12,000
1894-95	15,000
1895-96	12,000
1896-97	24,000

71. *Education.*—The charges of the *Education* Department rose from Rs. 25,37,481 in 1892-93 to Rs. 26,37,605 in 1894-95, and are estimated at Rs. 27,76,000 for 1896-97. The increase is partly for the payment of exchange compensation allowance, and partly for increased grants to the Sibpur Engineering College, and larger grants-in-aid to local colleges and schools. In 1894-95 the Director of Public Instruction, Burma, was on leave in Calcutta, and drew his salary and allowances in this Province, which led to some increase in that year. In 1895-96 twenty-five Departmental Sub-Inspectors were transferred to the District Boards with a grant of Rs. 30,555, so that the total charges fell to Rs. 26,07,827. In the current year the grant to the Civil Engineering College at Sibpur has been raised so as to provide for the practical training of mining students and for an agricultural class. A larger provision has also

been made for rewards to gurus in primary schools, for boarding charges, for the training of teachers, for the purchase of a kerosine engine for the Presidency College, and for the promotion of scientific research.

The State expenditure on education is not shown under one head, but is distributed over several budgets, viz, the Medical Budget for Medical Education, the Public Works Budget, which deals with the construction and repairs of school buildings, and the budgets of District Boards and Municipalities, which contain contributions from Provincial Revenues for scholastic purposes. The following abstract shows the true total of expenditure on Education in these Provinces during 1893-94, 1894-95, 1895-96 and 1896-97:—

Source of Provision.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
Provincial Funds	30,20,304	30,39,108	32,83,182	40,02,595
District Funds	10,82,397	11,28,066	11,60,000	12,16,638*
Mohsin Fund	69,833	71,413	59,975	64,054
Municipalities	93,201	98,946	73,774	69,999
Contributions by private persons and endowments	18,794	12,434	1,75,157	8,644
Total ...	42,84,529	43,49,967	47,52,088	53,61,930

Out of the amounts contributed by District Funds, nearly the whole consists of grants made by Government to District Boards for the maintenance of schools under their control, and the true Provincial expenditure on Education, during the period in question, may therefore be shown as follows:—

Budgets.	1893-94.	1894-95.	1895-96.	1896-97.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
Education	25,72,110	26,37,605	26,15,000	27,76,000
Medical	2,90,253	2,92,616	2,97,000	2,98,000
Public Works Department ..	1,57,941	1,08,887	3,71,182	9,28,595
Total ...	30,20,304	30,39,108	32,83,182	40,02,595
Add Contributions to District Funds	10,39,177	10,39,177	11,01,560	11,04,098*
Grand Total ..	40,59,481	40,78,285	43,84,742	51,06,693

* This includes Rs. 1,638 made over to the District Board of Bhagalpur for the erection of iron gates with masonry pillars, &c., for Bhagalpur Zilla School.

72. *Medical.*—The receipts of the *Medical Department* gradually rose from Rs. 1,70,263 in 1892-93 to Rs. 2,05,158 in 1894-95, and are estimated at Rs. 2,10,000 for 1896-97. The fees show a progressive annual increase, and the hospital receipts also began to increase from 1893-94 owing to the raising in January 1893 of the rate of contribution from the Hospital Port Dues Fund, for charges incurred on account of seamen sent to hospital. The charges of the Medical Department also rose from Rs. 16,12,491 to Rs. 18,13,034 in 1894-95, and are estimated at Rs. 19,67,000 for 1896-97. The increase is distributed over all the sub-heads, and is most marked under establishment, partly on account of the payment of exchange compensation allowance, and partly by

reason of a larger number of officers having been attached to the reserve staff. The increase under Sanitation and Vaccination is due to the greater activity of the department; and that under Hospitals and Dispensaries, to larger expenditure on the diet and clothing of patients. There has also been an increase under scholarships and stipends of Medical College and Schools. In the estimates for the current year provision has been made for the renewal of bedding, clothing and instruments in the Calcutta hospitals, and for grants of Rs. 23,500 to the new Bhawanipur Hospital, and of Rs. 14,000 to the Leper Asylum. Provision has also been made for a more highly-paid officer as Chemical Examiner.

73. *Political.*—The increase in the expenditure under *Political* for 1894-95 was due to payments having been made in that year on account of charges for Durbar presents purchased in 1893-94. In the estimates of the current year provision has been made for the demarcation of the Nepal boundary. The average charges of the five years amount to Rs. 22,000.

74. *Scientific and other Minor Departments*—The chief items of receipts under this head are:—

(*a*) Sale-proceeds of quinine and other cinchona alkaloids.

(*b*) Emigration fees.

The receipts under (*a*) gradually rose from Rs. 1,17,917 in 1892-93 to Rs. 1,87,101 in 1895-96, chiefly owing to the success of the scheme for selling quinine in five-grain packets, through the agency of the post-office. Emigration fees rose from Rs. 34,000 in 1892-93 to Rs. 47,000 in 1894-95, but they again fell to Rs. 32,000 in 1895-96. In 1892-93 a special contribution of Rs. 25,000 was made by Sir Dinshaw Manockjee Petit of Bombay towards the cost of construction of the Veterinary School and Hospital at Belgachia and it was credited to this head.

The total charges under *Scientific and other Minor Departments* rose from Rs. 3,40,665 in 1892-93 to Rs. 4,51,978 in 1893-94 and to Rs. 5,26,594 in 1895-96, as shown below:—

	1892-93.	1893-94	1894-95.	1895-96.	Revised estimate, 1896-97.

Total ...	3,40,665	4,51,978	4,23,067	5,26,594	4,58,000

A special contribution of Rs. 10,000 was made in 1893-94 towards the representation of Indian tea at the Chicago Exhibition. The regular charges

for salaries, establishment, &c., of the Veterinary School at Belgachia appeared for the first time in the accounts of that year. Larger payments were also made for the collection of objects of archæological interest in Orissa, and the charges under Provincial Museums were therefore high in 1892-93 and 1893-94. The Nimbong Cinchona Plantation has been purchased from Messrs. Kilburn and Company, and the purchase-money was paid during 1895-96 in two instalments of Rs. 5,000 and one of Rs. 71,000. In 1893-94 Rs. 15,763 was spent on the purchase of quinine, and in the revised estimates for 1895-96 Rs. 55,000 was provided for the purchase of cinchona bark and quinine. The expenditure under this head has been raised by the up-keep of the new cinchona plantation at Nimbong, as well as by temporary establishments required for the extension of the plantation at Mangpu. The expenditure under Miscellaneous represents charges incurred on taking casts of Asoka inscriptions. In the estimates for the current year, provision has been made for an annual grant of Rs. 2,000 to the Buddhist Text Society for the publication of their text. Rupees 50,000 have also been provided for the purchase of cinchona bark, which is rendered necessary by the growth of the demand for quinine in pice-packets.

75. *Superannuation.*—The increase in the expenditure under *Superannuation* is due to the amount of new pensions exceeding the lapses from deaths and transfers to other Provinces.

76. *Stationery and Printing.*—The increased demand from the public for the Indian Law Reports has raised the receipts under this head. The charges of the department are shown below:—

	1892-93.	1893-94.	1894-95.	1895-96.	1896-97.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
(*a*) Stationery office ...	1,53,223	1,66,001	1,54,137	1,53,040	1,58,000
(*b*) Stationery purchased in the country	70,456	66,690	63,405	61,629	70,000
(*c*) Government Presses ...	3,68,405	4,15,035	4,04,243	3,56,309	3,67,000
(*d*) Printing at private Presses	371	619	551	745	1,000
(*e*) Stationery supplied from Central Stores ...	7,70,369	6,11,506	4,99,861	5,15,359	6,25,000
(*f*) Refunds	485	504	1,127	998	1,000
Total ...	13,58,309	12,60,355	11,23,324	10,88,080	12,22,000

The increase in 1893-94 under (*a*) was due to increased expenditure on account of packing, freight, and similar charges, and that under (*c*) was incurred partly because more printing work was done at the Secretariat Press, and partly because a larger quantity of stores was supplied to the Jail Press. The decrease under this head in 1895-96 is due to the transfer of the charges of the Book Depôt to the Civil Secretariat. The saving under Stationery supplied from central stores resulted from the reduced use of certain kinds of expensive paper, and from the economies effected in the consumption of forms.

77. *Miscellaneous.*—The receipts under this head vary within wide limits, and depend mainly on the amount of deposits lapsing to Government. The increase in 1893-94 was chiefly due to exceptionally high receipts from partition fees, and from the sale of railway lands in Muzaffarpur, and also to the fact that the rents of holdings in Hastings were for the first time entered in the accounts. The increase in 1894-95 was owing to the sale of old stores belonging to the Bihar Opium Agency and the higher fees paid for the survey of tea and arable lands in Jalpaiguri. The receipts from partition fees and unclaimed deposits were unusually high in 1894-95 and 1895-96. The fluctuations on the expenditure side are shown below:—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.

Total ...	2,11,650	2,86,171	2,29,060	2,81,956	2,56,000

The charges under the head Contributions represent the outlay for maintaining and working the telegraph lines between Demagri and Chittagong and Dumka and Rampur Hât. The increase under Donations for charitable purposes in 1894-95 was due to additional grants to the District Charitable Society for the repairs of the Alms House buildings, and to the payment of the Government contribution of Rs. 8,000 towards the maintenance of the Albert Victor Asylum for lepers. In 1895-96 Rs. 35,000 was granted towards the site for a new Leper Asylum and the maintenance of the existing Asylum. During the current year it has been decided to treat the Asylum as a Government institution, the contribution paid by the Municipality being treated as a receipt in the Medical Budget estimates. The increase under Petty establishments in 1893-94 and 1896-97 is due to the adjustment, under this head, of the charges on account of Khedda establishments and contingencies. In 1894-95 the Western Duars were reserved for the Imperial Khedda Department. In the current year some increased provision has been made for Khedda establishments in both Jalpaiguri and Angul. The increase under rents, rates and taxes in 1893-94 was due to a special payment of Rs. 30,517 to Omrao Begum Shahzada Muhammad, being the arrear allowance for the maintenance of the tomb of Khaja Anwar Sahib from December 1881 to March 1893. The increase in 1895-96 and 1896-97 is due to the enhancement of the municipal assessment on the Bengal Secretariat, Calcutta, and to the inclusion under this head of charges on account of other buildings in Hooghly and Champaran. The expenditure on Special Commissions of Enquiry in 1895-96 represents the cost of the Labour Enquiry Commission.

78. *Famine relief.*—The Provincial expenditure of Rs. 1,118 in 1892-93 was incurred in the districts of Darbhanga, Muzaffarpur, Dinajpur and Purnea.

79. *State Railway—Net profits.*—Under the terms of the contract, the Provincial Government gets one-half of the net earnings of the Eastern Bengal

Railway System, after deducting the working expenses. The following statement illustrates the results of this arrangement during the last five years:—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
Gross receipts	1,18,29,951	1,24,94,814	1,43,86,293	1,43,15,686	1,46,00,000
Working expenses	56,16,291	54,25,131	57,21,815	56,09,676	60,00,000
Net receipts ...	62,13,660	70,69,683	86,64,448	87,06,010	86,00,000
Provincial share	31,06,428*	35,34,841	43,32,224	43,53,005	43,00,000

* Rupees 402 was deducted on account of payments made by the East Indian Railway in behalf of the late Nalhati State Railway.

The increase in gross receipts is mainly due to the increase in jute traffic. In 1893-94 the opening of the Barsoi-Kissenganj Branch and the Bengal Duars Railway increased the receipts to a certain extent. The transfer of the Goalundo-Narayanganj Steamer Service to the India General Steam Navigation Company, Limited, from the 1st July 1895, reduced the gross receipts in 1895 96.

The working expenses are debited to Imperial Funds, but the Provincial Government has an indirect interest in them, as it gets one-half of the net receipts from the Railway revenue. The decrease in 1893-94 was due to the debit to demands payable in 1892-93 of Rs. 2,62,468, being the depreciation on Bengal Central Railway rolling-stock by credit to Capital. The increase in 1894-95 was partly under locomotive and carriage and wagon expenses, but mainly for increase in the traffic. The decrease in 1895-96 is due to the transfer of the Steamer Service referred to above.

80. *Subsidized Company's land, &c.*—In the Provincial contract no provision was made for expenditure on railways, but the Government of India, while passing orders on the Public Works Budget for 1892-93, ordered that the expenditure in connection with acquisition of land for the Duars Railway should be met from the Provincial Revenues. Under the terms of the contract, all land required for the Duars Railway has to be provided free of cost to the Company, and the actual charges incurred on this account amounted to Rs. 25,357 in 1892-93, Rs. 2,585 in 1893-94, Rs. 353 in 1894-95, and Rs. 564 in 1895-96. It is believed that the accounts of the land acquisition proceedings have now been finally closed, and that there will be no expenditure on this account in the current year.

81. *Miscellaneous Railway expenditure.*—In the year 1893-94 the Provincial Government had to pay Rs. 1,207 to meet the charges incurred by the Manager, Eastern Bengal State Railway, in marking out the land required for the Sultanpur-Bogra Railway, which were adjusted under this head.

82. *Irrigation Major Works.*—The following table shows the net financial result of the working of the larger canals:—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.
1	2	3	4	5	6
RECEIPTS.	Rs.	Rs.	Rs.	Rs.	Rs.
Orissa Canals	4,97,658	3,76,575	3,33,072	4,17,222	3,50,000
Midnapore Canal ...	2,80,177	3,04,943	2,94,682	2,63,994	2,40,000
Hidgili Tidal Canal ...	53,462	59,196	58,525	61,976	60,000
Sone Canals	10,56,373	9,31,912	8,37,761	7,72,123	9,00,000
Total receipts ...	18,87,670	16,72,626	15,24,040	15,15,315	15,50,000
Total working expenses ...	13,95,343	14,55,178	13,72,972	12,98,405	14,65,000
Net receipts ...	4,92,327	2,17,448	1,51,068	2,16,910	85,000

The receipts in 1892-93 were abnormally high owing to the recovery of old outstandings and the prompt realisation of current demands. In 1893-94, some arrears due on the Midnapore Canal were collected, and the receipts in 1894-95 fell in proportion. Seasonable rain lessened the demand for water in 1895 96, and the receipts fell to Rs. 15,15,315, the lowest on record during the period of the contract. In the current year the returns furnished by the Examiner show a substantial increase under water-rates on the Sone Canals, due to the scarcity of water last year, and hence the estimate has been raised from Rs. 15,00,000, as passed by the Government of India, to Rs. 15,50,000, as explained in paragraph 25 above.

83. The receipts from *Minor Works and Navigation in charge of the Public Works Department* amounted to—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.

GRAND TOTAL ...	7,54,327	7,44,667	6,95,613	7,10,547	7,00,000

The decrease under Calcutta and Eastern Canals is due to much of the traffic in jute being carried by rail and steamers. The Eastern Bengal State Railway now serves some of the marts which formerly sent their produce by the Circular and Eastern Canal routes, and much of the traffic, hitherto carried by boats, is now conveyed by steamers. There was heavy pilgrim traffic on the Orissa Coast Canal in 1893-94, and the revenue obtained in that year was the highest ever obtained. The falling off in the receipts from the Nadia Rivers is ascribed partly to the bad state of the rivers and partly to the dullness of trade.

84. The following table shows the expenditure on *Minor Works in charge of the Public Works Department*:—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.

GRAND TOTAL ...	13,94,161	14,81,075	14,57,829	15,64,533	18,33,000

The above table shows that the increase under this head is mainly under capital expenditure on canals, which rose from Rs. 1,12,502 in 1892-93 to Rs. 1,79,701 in 1894-95, to Rs. 3,22,814 in 1895-96 and to Rs. 5,27,000 estimate for 1896-97. The estimate for 1896-97 includes Rs. 3,50,000 for the improvement of the Bhangore khal. The suspense balances of the Brahmini-Baiturni Division were transferred from Major Works, Imperial, to Minor Works and Navigation, Agricultural Works, Provincial, in the year 1895-96. The amount involved in this adjustment was Rs. 1,06,760. An additional grant of Rs. 30,000 has been sanctioned in the current year for the construction of two distributaries from the Eden Canal, and this accounts for the increase in 1896-97 under Works for which neither Capital nor Revenue Accounts are kept. The reduction in the expenditure under Agricultural Works from 1895-96 is due to the adjustment of the charges incurred by Civil Officers for improvements in Government estates, under Land Revenue instead of under this head as heretofore.

85. *Minor Works in charge of Civil Officers.*—The receipts under this head include (*a*) fixed recoveries on account of lands benefited by embankments, (*b*) recoveries on account of capitalized maintenance charges of the Dankuni drainage works, and (*c*) receipts of the Dankuni Canal. These receipts amounted to Rs. 1,24,702 in 1892-93 and rose to Rs. 1,28,071 in 1893-94. The increase is due chiefly to the recovery of arrears on account (*a*). There was a special credit of Rs. 77,699 in 1894-95, being the recoveries on account of capitalized maintenance charge of the Howrah drainage scheme, and the total receipts were Rs. 1,81,347. The recoveries on account of (*b*) are expected to be completed in the current year.

86. *Civil Works in charge of Public Works Department.*—The receipts under this head amounted to Rs. 1,63,060 in 1892-93, but rose to the abnormal figure of Rs. 3,07,209 in 1893-94, owing to the Government share of the profits of the Darjeeling-Himalayan Railway for the three years ending the 30th June 1892 having been paid by the Agents during that year. There was also a gross profit of Rs. 30,439 on the management of the Calcutta Workshops. In 1894-95 Rs. 34,817 were credited in the accounts as the profits from those Workshops. There were also special receipts from sale proceeds of buildings, and the total receipts amounted to Rs. 2,35,308. In 1895-96 the distillery buildings at Manicktolla were sold, and these sale-proceeds and the larger profits from the Calcutta Workshops raised the total receipts to Rs. 2,64,594. In 1896-97 provision has been made for the nominal receipts of the department amounting to Rs. 1,80,000, including Rs. 30,000, being the Government share of the profits of the Darjeeling-Himalayan Railway. The charges under this head amounted to Rs. 27,23,928 in 1892-93, Rs. 25,59,450 in 1893-94, Rs. 24,90,918 in 1894-95, Rs. 30,89,752 in 1895-96, and Rs 40,33,000 (revised estimate) for 1896-97, as shown below:—

	1892-93.	1893-94.	1894-95.	1895-96.	Revised estimate, 1896-97.

After the terms of the contract had been settled, several Provincial buildings and roads were transferred to Local authorities for repairs and maintenance, with additional grants from Provincial Revenues to meet the charges. The construction and repairs of several other buildings were also localised with additional grants from Provincial Revenues. As these additional grants are adjusted under the head Contributions from Provincial to Local, the charges of the Public Works Department have decreased, while those under Contributions have increased. The following important Public Works have been constructed during the term of the Provincial contract:—

Name of work.	1892-93.	1893-94.	1894-95.	1895-96.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.

Total ..	6,34,573	4,20,108	2,82,950	7,74,026

In the first part of the contract period, the expenditure on Public Works was necessarily restricted. The increased balance at the credit of the Provincial Government at the end of 1894-95 and the rapid growth of revenue, specially under Railways, enabled the Lieutenant-Governor to spend larger amounts on Civil Works in 1895-96, and to increase the allotment under this head for the current year.

87. *Civil Works in charge of Civil Officers.*—The increase in receipts under this head is from tolls on ferries. On the expenditure side a special payment was made in 1892-93 on account of the cost of purchasing the cantonment land on the Lebong spur, and the total charges amounted to Rs. 1,81,201. In 1894-95 the special payments of Rs. 50,000 for the purchase of land for a recreation ground at Marcus Square in Calcutta, of Rs. 30,575 for improvements in the Suburbs of Hastings and of Rs. 50,000 for additions and alterations to the Sibpur Engineering College were adjusted under this head, and the total expenditure amounted to Rs. 2,38,919. In 1895-96 an additional grant of Rs. 14,000 had to be made to meet charges due on the Marcus Square Ground. The Public Works charges in the district of Angul, and the cost of fitting up

estimate of the current year, which has been placed at Rs. 2,47,000, provision has been made for the expenditure of Rs. 24,214 in the district of Angul, and of Rs. 90,269 for electric-lighting and a blacksmith's shop at the Sibpur Engineering College.

88. *Contributions from Provincial to Local.*—The following table shows the expenditure under the several major heads of account which has been met from the contributions from Provincial Revenues to Incorporated Local Funds:—

District Funds.	1892-93.	1893-94.	1894-95.	Revised estimate, 1895-96.	1896-97 (estimate).

Reserve for unforeseen demands	.....	.....	.....	.....	74,000
Total Grants from Government	13,50,207	13,56,179	12,49,917	12,66,000	13,16,000

In 1892-93 a special grant of Rs. 1,00,000 was made to the District Board of Darbhanga towards expenditure incurred by them on relief works. In 1893-94, special grants of Rs. 24,855 and Rs. 7,305 were made to the Village Chaukidari Fund and the Road Patrol Fund, respectively, to keep them solvent, and Rs. 21,881 was allotted to the Bhagalpur District Board on account of famine relief works. The estimate for the current year contains a special provision of Rs. 74,000 to meet unforeseen charges, such as those referred to in paragraph 44 above.

89. The general financial results of the contract of 1892 may be summarized thus:—The Provincial revenues, which were estimated at the beginning of the period at Rs. 4,22,30,000—14,39 000=Rs. 4,07,91,000, amounted on an average to Rs. 4,42,14,000, being an increase of Rs. 34,23,000: the charges, which were estimated at Rs. 4,07,91,000, came to Rs. 4,38,97,000, showing an increase of Rs. 31,06,000, and the balance at the end of 1896-97 is now estimated at Rs. 39,36,000 against Rs. 23,53,431 at the beginning of the year 1892-93.

Order.—Ordered, that a copy of this Resolution be submitted to the Government of India, Department of Finance and Commerce, for information.

Ordered also, that a copy of the above Resolution be forwarded to the Board of Revenue; to all Commissioners of Divisions; to the Accountant-General; to the Inspectors-General of Civil Hospitals, Police, Jails, and Registration; to the Directors of Public Instruction and Land Records and Agriculture; to the Conservator of Forests; to the Port Officer, Calcutta; to the Superintendent of the Royal Botanic Gardens, Calcutta; to the Manager of the Eastern Bengal State Railway, and to all Departments of this Government, for information.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Govt. of Bengal.

RESOLUTION ON THE ANNUAL GENERAL ADMINISTRATION REPORT OF THE ORISSA DIVISION FOR THE YEAR 1895-96.

GENERAL DEPARTMENT—MISCELLANEOUS.

Darjeeling, the 14th October 1896.

RESOLUTION—No. 530T.—G.

READ—

The Annual General Administration Report of the Orissa Division for the year 1895-96.

The Divisional Report is submitted by Mr. R. C Dutt, C.I.E., a few days late in consequence of delay in obtaining complete information from the districts. The Division was in charge of Mr. G. Stevenson during the first two months of the year, of Mr. H. G. Cooke for the next four months, and of Mr. R. C. Dutt, C.I.E., for the rest of the year. In all three districts there were changes of District Officers; though in Balasore Mr. B. Dé was absent only for a month during which he was on leave.

2. *Tours and Inspections.*—The Commissioner was on tour for 130 days; all the District and Subdivisional Officers spent the required number of days on tour, or more, except the Collector of Cuttack, whose tours, owing to changes in the *personnel* of the District Officers and the prolonged illness of the Assistant Magistrate, fell short of the prescribed limit by two days. All the offices were duly inspected, excepting the district treasuries of Cuttack and Balasore and the sub-treasury at Bhadrak, which were not inspected by the Commissioner. No account is given of the inspection by Subdivisional Officers of their own offices. The Commissioner's and Collectors' tours and inspections appear to have been well planned, useful and thorough.

3. *Weather and crops: Public health: Material condition of the people.*—The total rainfall of the Division was well distributed and somewhat in excess of the normal, except in Balasore, where there was a slight deficiency. The Commissioner reports that the crops, and especially the rice crop, were good, and that cultivators did well, save in certain parts of Puri where some damage was done by floods. Though the rainfall was abundant, and the crops are reported to have been good, yet in the tabular statement contained in paragraph 22 of the Commissioner's report, the outturn of most of the important crops is given as only 12 to 13 annas and that of the rice crop as 15 annas. The Commissioner appears to have forgotten that according to the nomenclature used in official reports 16 annas represents an average crop and 15 annas therefore less than an average crop. The exports of rice appear to have been exceptionally large, but still prices ruled lower than in any of the past ten years.

The death-rate per mille shown for the Division in 1895 is 27·3 against 33·5 in 1894; it might be inferred, if any conclusions could be drawn from these figures, that there was some improvement in the general health, but the very low rate recorded in the year under report really points to laxity in registration rather than improvement in the public health. The rate of births reported is even lower than that of deaths. The material condition of the people was good. Some interesting and useful statistics relating to the transfers of raiyati holdings and indebtedness of the cultivators were collected by the Subdivisional Officer of Khurda. It was found that in 11 villages in which enquiry was made, 70 per cent. of the cultivators were more or less in debt to village mahajans, who are themselves for the most part substantial raiyats, and not professional money-lenders; that generally the land is not passing from the hands of the cultivating to the money-lending classes, though the right of transfer has been exercised without restriction for 60 years, and that the practice of subletting does not exist to any large extent. Mr. Romesh Chander Dutt from his experience in Orissa and elsewhere infers that the right of free transfer possessed and exercised by raiyats by custom in many parts of Bengal has been beneficial to their interest. This important question is separately under the consideration of Government. It is one on which it is dangerous to generalise, and regarding

which Government are not in a position to express a decided opinion at present. Statistics such as were collected in Khurda have been obtained for typical areas under survey and settlement.

4. *Manufactures: Trade and Commerce.*—The only manufacture of any importance is that of salt, carried on by Government at two factories on the Chilka Lake. The output was 1,78,000 maunds against 2,10,000 in 1894-95; the sales were, however, nearly double those of the previous year. Silver filigree work at Cuttack and fine muslin weaving at Goolnagar are special crafts which are declining.

The aggregate value of the sea-borne trade is estimated at 156½ lakhs of rupees, and shows an increase of 36½ lakhs over the previous year. The exports of rice by sea are valued at 74⅓ lakhs. The canal traffic is insignificant in comparison with the sea borne trade. The rice and paddy carried along the canals in country boats amounted to about 4⅓ lakhs of maunds.

5. *Civil Justice.*—The number of suits instituted before Munsifs showed an increase, but the number of witnesses examined decreased; the percentage of witnesses detained for two days or more shows a very satisfactory decrease from 13·3 to 9·2. The account given of rent suits tried by Deputy Collectors is the reverse of satisfactory. The number of suits diminished, the number of witnesses examined increased by more than one-third, and the percentage of witnesses detained more than two days, though not in itself very high, rose from 1·97 to 2·93. The Commissioner says that the number of witnesses examined by Deputy Collectors was larger than in the preceding year, and the percentage of witnesses detained for more than two days increased on that account. This appears to the Lieutenant-Governor to be no explanation. The largeness of the number of witnesses examined is no reason for summoning and detaining witnesses for days on which they could not be examined.

6 *Crime: Police: Criminal Justice.*—The number of cognizable offences reported (including 1,500 sanitary cases) was 6,100, being less by 1,800 than in the previous year; there was, however, only a slight decrease in non-cognizable cases, which numbered 5,800 against 5 900 in the preceding year. The Commissioner attributes the decrease in crime to the prosperity brought about by good harvests; and his conclusion is probably correct seeing that the total number of offences against property (serious and minor) largely decreased. Counterfeit coins are reported to have been frequently met with in the district of Cuttack. A gang of coiners from Bijapur was discovered there with their implements and false coins, and the Commissioner has no doubt that most of the counterfeit coins in circulation were coined by such gangs from Western India. Two hundred and four cases were declared false; in 41 or 20 per cent. of these cases prosecutions were instituted, and were successful in 17 cases. The results of prosecutions in such cases show a satisfactory improvement. In 11·6 per cent. of cases reported the police refused enquiry, against 15·8 in the preceding year.

Six thousand and six hundred cases were brought to trial, against 8,000 in 1894 Of these, 5,000 were tried by Stipendiary Magistrates, who examined 18,000 witnesses, against 21,000 in the preceding year. The work of Stipendiary Magistrates having been so considerably lightened, it is unsatisfactory that the percentage of witnesses detained by them for more than two days should, as in the case of Deputy Collectors trying rent suits, have risen (from 1·4 to 2·3); and that the number of police cases remanded six times or more should have risen from 17 to 64. These facts indicate either want of energy on the part of Stipendiary Magistrates and Deputy Collectors, who, when they have summoned witnesses, should take care not to subject them to inconvenience by unnecessary delays, or want of forethought in summoning them for dates on which they cannot be examined. The Commissioner's special attention should be given to this matter in the current year. The results of appeals too have been less favourable everywhere, except in Khurda. Honorary Magistrates disposed of 1,600 cases and examined 3,200 witnesses. They detained 3·5 per cent. of the witnesses for more than two days, and three police cases were remanded six times or more. The attendance of Honorary Magistrates was generally good, except in the Sadar Benches of Cuttack and Balasore. The Commissioner advocates the adoption of a suggestion made by Mr. Maude, late District Officer of Cuttack, that more Honorary Magistrates should be appointed to sit in the interior of districts and try petty

complaints. Mr. Dutt recommends the appointment of an Honorary Magistrate with temporary powers in each newly-formed Union. His remarks on this point will be considered in the Judicial Department.

Fines to the amount of Rs. 32,000 were imposed by the Criminal Courts during the year; Rs. 28,000 out of the total demand were collected, and a sum of Rs. 7,000 was written off. At the close of the year there remained an outstanding balance of Rs. 17,000.

Fifty-three cases were tried at the Sessions Court, and convictions were obtained in all but nine—a result which is satisfactory as showing that commitments were carefully made, and that innocent persons and accused persons against whom there was not sufficient evidence were not subjected to the harassment of trial without adequate cause, and that the time of the Sessions Courts was not unnecessarily occupied in the trial of such persons.

The Report contains but few remarks on the conduct of the police, which is said not to compare unfavourably with that in other parts of the province. Mr. Dutt suggests that the initial pay of Sub-Inspectors should be raised, so as to secure officers of a better social position. A case of torture during investigation was detected in Cuttack, and a head-constable and constable were prosecuted to conviction. The question of reorganizing the village police in Orissa has long occupied, and still occupies, the attention of Government. The Lieutenant-Governor regrets to notice that more chaukidars were punished, and not so many rewarded, in 1895 as in 1894.

7. *Land Revenue.*—The total demand (including the arrear demand) on account of Land Revenue, Road-and Public Works and Zamindari Dâk Cesses was Rs. 22,86,793, and of this amount Rs. 22,13,738, or 96·8 per cent., were collected and Rs. 2,601 remitted, leaving a balance of Rs. 70,454. The collections show a satisfactory improvement on the previous year.

The land revenue demand on permanently-settled estates in this Division is comparatively small, being little more than a lakh and-a-half; of this sum all but Rs. 20 was collected. There was no arrear demand. The collections in temporarily-settled estates were very satisfactory, and exceeded 99·9 per cent. of the total demand (current and arrear) in all three districts; the collections in Government estates were also good except in Balasore. The following are the percentages of collections to current demand in these estates:—

Cuttack	...	...	95·3
Balasore	...	...	77·8
Puri	...	...	93·5

The standard of 90 per cent. was thus surpassed, except in Balasore, where the collections were below the standard, but no explanation of the deficiency has been given. Of Road and Public Works Cesses, 90·2 per cent. of the gross demand was realized. The results of the year's collections as a whole are highly creditable to the Commissioner and Collectors of the Division. The reduction in the numbers of estates brought to sale for arrears of revenue and of certificates issued for realization of public demands is also a satisfactory feature in the year's report.

8. *Surveys and Settlements.*—The progress made in the settlement of the temporarily-settled estates of the Division and of the Khurda Government estates will be separately reviewed. Here it is only necessary to note that the settlement of rents is now making satisfactory progress, and that the proceedings are causing no excitement among the raiyats, while the zamindars are awaiting the results of the land revenue assessment with anxiety. The Lieutenant-Governor has every intention of treating them with consideration, and hopes shortly to be able to announce the percentage of assets that will be taken.

Section 39 of the Tenancy Act was extended to the Division during the year.

9. *Wards' Estates.*—There were six estates in the Division under the management of the Court of Wards with a current demand of more than 3½ lakhs. The collections were 104·6 per cent. of the current demand—a satisfactory result. The outstanding arrears amounting to 2 lakhs of rupees or nearly two-thirds of the current demand are large, and it is probable that a large proportion of this sum might with advantage be written off.

10. *Excise: Stamps: Income-tax.*—The excise revenue amounted to Rs. 6,07,000 and showed an increase of Rs. 36,000, and its incidence per head of population rose from 2 annas 4·3 pies to 2 annas 6·07 pies. The increase is mainly in the consumption of country spirit. A revenue of Rs. 3,93,500 was derived from stamps, which was less by Rs. 6,000 than in the previous year. There are 2,700 persons in the Division assessed to income-tax, and they pay Rs. 56,600. The Commissioner reports that the enquiries into incomes made both by Assessors and Deputy Collectors are often less complete than could be wished.

11. *Railways and other Public Works.*—Railway construction is proceeding in Orissa with great activity; the East Coast Railway was working traffic as far north as Khurda Road Station before the close of the year, and it is expected that the branch line to Puri, which takes off from that point, will be opened shortly. The Bengal-Nagpur Railway is being continued through Balasore and Cuttack to join the East Coast Railway.

The area irrigated by the Orissa Canals was 121,000 acres; and the total revenue demand was Rs. 2,82,000, of which Rs. 2,43,000 were collected, and the large balance of Rs. 77,000 outstanding at the commencement of the year reduced by four-sevenths.

12. *Education.*—The number of schools and pupils increased by 400 and 7,000, respectively, to 6,500 and 106,000. There was a slight increase in Muhammadan pupils. The total expenditure on education was Rs. 4,53,000. Of this sum, District Boards contributed Rs. 84,000 and Municipalities Rs. 5,300. Rupees 2,80,000 were spent on primary education, District Boards spending Rs. 38,000 and Municipalities Rs. 3,700. The Commissioner remarks that the results of B.A. examination of the students of the Ravenshaw College during the year were unsatisfactory, and suggests that "if there be any possible way of improving the institution, the remedy should be sought for and applied." The attention of the Director of Public Instruction will be called to his remarks.

13. *Dispensaries and Hospitals.*—There are 30 institutions for providing medical relief; and 114,000 patients were treated during the year under report at a cost of Rs. 40,000. The General Hospital at Cuttack and the Cholera Hospital at Puri receive praise from the Magistrates of those districts, but the former institution stands in need of pecuniary help.

14. *Local Self-Government Institutions.*—There are five Municipalities in the Division—Cuttack, Jajpur, Kendrapara, Puri, and Balasore. At Puri the ancient Markund tank has been cleaned out for the first time on record, thanks to the zeal and energy of Dr. Banks, the Civil Medical Officer. Some smaller sanitary improvements appear to have been made at Kendrapara. Of the work of the other Municipalities, the Report gives a somewhat meagre account. All the District Officers report favourably of the working of the District Boards, and the Commissioner himself is of opinion that the loyalty and intelligence with which they have performed their duties deserve recognition. The Lieutenant-Governor is glad to notice that the number of Muhammadans in public employ is increasing.

15. *Social and Political Institutions.*—Seven Societies and Clubs appear to have held meetings during the year. A Committee was able to collect nearly Rs. 70,000 in subscriptions for the repairs of the great temple at Puri.

16. *The conduct of Zamindars* is reported to have been generally satisfactory, though some exceptions are made. The Lieutenant-Governor notices with pleasure that Rajas Baidyanath Pandit and Baikantanath De, Rai Hari Ballabh Bose Bahadur, Babu Radha Charan Dass, and Babu Satyendra Nath De are favourably mentioned for their liberality and public spirit.

17. The Lieutenant-Governor thanks the Commissioner for his efficient administration of the Division and for his clear and concise report, from which extracts are published for general information.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,

Offg. Secretary to the Govt. of Bengal.

Extracts from the Annual General Administration Report of the Orissa Division for the year 1895-96.

* * * * * * *

IV.—PUBLIC HEALTH.

34. The following table compares the recorded mortality in the districts of this Division, and the death-rate per mille during the past two calendar years:—

District.	Population as per census of 1891.	Number of deaths from—										Rate per mille.	
		Cholera.		Fever.		Small-pox.		Other causes.		Total.			
		1894.	1895.	1894.	1895.	1894.	1895.	1894.	1895.	1894.	1895.	1894.	1895.
1	2	3	4	5	6	7	8	9	10	11	12	13	14
Cuttack ...	1,937,671	6,712	4,116	37,320	37,140	1,719	1,398	22,357	17,870	68,108	60,494	35·14	26·02
Balasore ...	994,625	4,905	2,261	14,859	13,600	210	168	12,784	13,450	32,758	29,479	32·99	29·63
Puri	944,998	1,993	2,331	8,302	6,541	405	193	16,367	16,895	29,067	25,960	30·75	27·47
Total ...	3,877,294	13,610	8,708	60,481	47,281	2,334	1,659	53,508	48,215	129,933	105,863	33·5	27·30

35. I am not disposed to place absolute reliance on these figures, or to accept the conclusion that the death-rate in the Division was only 27·3 during the year. But in so far as the figures can be relied upon, they show that the Division fared much better in respect of public health during the year under report than in the previous year, there having been a decrease in mortality from all causes.

36. The death-rate per mille of the population during the past five years is compared in the following tabular statement:—

Year.	Cuttack.	Balasore.	Puri.	Total.
1	2	3	4	5
1891 ...	23·38	26·18	27·76	25
1892 ...	38·34	43·61	37·86	39
1893 ...	24·26	25·91	29·02	25·8
1894 ...	35·14	32·99	30·75	33·5
1895 ...	26·02	29·63	27·47	27·30

37. In Cuttack the death-rate in 1895 was lower than that of 1894 and 1892, but somewhat higher than that of 1891 and 1893, but the Collector thinks that, having regard to the fact that registration is probably more accurate than before, the year 1895 should not be considered less healthy than 1891 and 1893.

38. The District Officer of Balasore says that no definite explanation can be given for the fluctuation in the number of deaths from year to year, but the above figures indicate that the year 1895 was healthier than 1892 and 1894, and less healthy than 1891 and 1893.

39. In Puri, excluding cholera which was worse than in the preceding year, there was a total decrease of 3,445 in the mortality from other causes.

Seasonable rainfall, which supplied the people with good drinking-water and replenished their tanks and wells, is believed to be one cause of the good health during the year. Climatic conditions are also said to have been more favourable.

40. The following table gives the total number of births and deaths and their rate per mille of the population in the different municipalities of this Division:—

District.	Town.	Population.	Deaths Registered.				Births Registered.			
			1894.	1895.	Rate per mille.		1894.	1895.	Rate per mille.	
					1894.	1895.			1894.	1895.
1	2	3	4	5	6	7	8	9	10	11
Cuttack	Cuttack	42,033	1,404	1,196	33·4	28·73	990	1,046	23·55	24·88
	Jajpur	11,991	535	495	46·2	38·8	276	320	23·01	26·68
	Kendrapara ...	17,647	502	489	28·9	27·71	331	545	29·5	30·88
Balasore ...	Balasore	20,775	645	660	31·04	31·76	607	535	29·21	25·75
Puri ..	Puri	28,794	1,351	1,356	46·9	43·6	446	563	15·5	19·5
	Total ...	121,241	4,537	4,095	37·4	33·5	2,642	3,009	23·4	24·8

41. In so far as these figures can be relied upon,—and I do not think they are absolutely reliable—they show the death-rate to be between 27 and 38 per mille except in Puri town, where the circumstances are exceptional. And the birth-rate (excluding Puri) is shown to be between 24 and 30.

Vaccination.

42. The following table gives the statistics of vaccination:—

Districts.	Number of vaccinators.	Number of persons vaccinated.	Successful.	Unsuccessful and unknown.	Cost of establishment.	Average cost per head.	Average cost per head of successful cases.	Number of cases inspected.	
								Found successful.	Found otherwise.
1	2	3	4	5	6	7	8	9	10
					Rs. A. P.	Rs. A. P.	Rs. A. P.		
Cuttack	48	18,398	16,221	2,177	2,356 8 10	0 2 2	0 2 3	16,221	2,177
Balasore	48	44,296	43,698	598	1,714 11 6	0 0 7	0 0 7	62,655*	755*
Puri	30	22,486	21,427	1,059	291 8 9	0 2 0½	0 2 3	11,928	790
Total ...	126	85,180	81,346	3,834	4,362 13 1	0 9·8	0 10·2	90,804	3,702
Total for 1894-95 ...	115	81,282	77,189	4,093	7,042 4 6	0 4 5½	0 5 0½	67,658	2,839

* Cases inspected by different officers have been taken as so many different cases inspected.

43. The number of vaccinations performed during the year, as well as the number which proved successful, show a large increase over the previous year, and it is to be noted that, although there was an increase in the staff of vaccinators, the cost of the establishment shows a remarkable decrease. But the result in Cuttack is not satisfactory when compared either with the previous year or with the other two districts during the year under report. Though the number of vaccinators was larger, there was a decrease both in the number of total operations and of successful cases. The average number of operations to each vaccinator was only 383, against 528 in the preceding year, while the same in Balasore and Puri was 923 and 748 respectively, against 884 and 714 in the previous year. On a reference being made to the Civil Surgeon, he explains that the figures are not altogether reliable; that any increase in the number of vaccinators necessarily decreases the average number of cases for each vaccinator, and that more satisfactory results could be expected if free vaccination was introduced.

44. The system of requiring each vaccinator to deposit a security of Rs. 10 was in force in Balasore during the year, and no exception to this rule was made.

45. The District Officer of Cuttack reports that people are said to prefer inoculation to vaccination, the former being considered to have a better effect as a protective measure. The District Officer of Puri states that there was some opposition to vaccination from ignorant persons in the Khurda subdivision, which was, however, overcome through the tact of the Subdivisional Officer.

The District Officer of Balasore states that since the introduction of vaccination, inoculation is almost unknown except along the southern boundary of his district. This is attributed to the employment of almost all the inoculators as licensed vaccinators.

46. There were nine cases reported under the Prohibition of Inoculation Act, IV (B.C.) of 1865, one being in Puri, six in Cuttack, and two in Balasore. The former was a true one, but the proceedings were stopped by the trying Magistrate, as the man who inoculated the children could not be traced.

The particulars of the six cases in Cuttack are given in the subjoined table:—

Cases reported.	Actually brought to trial.		Persons acquitted.	Persons convicted.
	Cases.	Persons.		
1	2	3	4	5
6	6	9	4	5

The accused in the two cases in Balasore were sentenced, one to 15 days' and the other to one and-a-half month's rigorous imprisonment.

47. There was no case reported in Puri under the Vaccination Act, V (B.C.) of 1880. In Cuttack there were 11 cases, including one pending from the previous year. In the 10 cases reported during the year, 11 persons were actually brought to trial, of whom 7 were convicted and 4 acquitted.

48. The District Officer of Balasore has furnished no report on the working of the Inoculation or Vaccination Act. His attention will be drawn to this omission.

V.—MATERIAL CONDITION OF THE PEOPLE.

49. The material condition of the people during the year under report was good. Good harvests were reaped in the last winter and the preceding winter; the cultivators were therefore well off; and rice was exported in larger quantities in the last cold season than has been known for many years past. The prices of rice were comparatively low during the last year, and the landless labourers found employment and fair wages in large numbers in the railway lines under construction.

50. Mr. De, Collector of Balasore, remarks that the condition of the petty *bhadra lok* classes, who are averse to manual labour, is steadily deteriorating. I imagine the condition of the moneyless "genteel" class is a hard one all over the world in these days of open competition, and Bengal is no exception to the rule.

51. Mr. Growse, Collector of Cuttack, remarks that the material condition of the people generally was good on account of good harvests, low prices, and the construction of the Bengal Nagpur Railway, which gives employment to large numbers of labourers.

52. Mr. Bell, Collector of Puri, gives some interesting figures, and takes the annual produce of food-grains in his district at over 74 lakhs of maunds, and the annual local consumption at nearly 67 lakhs. He comments on the rise in the price of rice within the last 20 years, which has greatly benefited the cultivators, but must have been a severe strain on the landless classes. Roughly speaking, husked rice sold, Mr. Bell finds, at 27 seers the rupee during the five years ending 1876, while the average price during the five years ending 1895-96 is 17 seers the rupee. The good harvests reaped in the last year and the year before has improved the condition of the people, and money borrowed on registered bonds fell in Puri district from Rs. 1,13,307 in 1894-95 to Rs. 49,854, which is less than one-half.

53. As was remarked by my predecessor in paragraph 59 of the Divisional Administration Report for 1894-95, the subdivision of Khurda affords exceptional facilities for an intimate knowledge of the condition of the people, as the State is the landlord. Mr. J. N. Gupta, the present Subdivisional Officer, has made an intelligent use of his opportunities, and the facts which he has ascertained are of great value.

54. The whole population of the subdivision consists of agriculturists and agricultural labourers. The people who are known as mahajans, as well as those who are skilled artizans, generally own lands like the other agriculturists. The condition of the people during the year under review was good owing to two or three good harvests.

55. Nevertheless, the majority of the cultivators are in debt, and always remain in debt, to the mahajans. They borrow paddy from the village granaries, pay off with high interest after the harvest, and begin to borrow after they have consumed the surplus. Mr. Nagendra Nath Banerjee in his his excellent Agricultural Report on Cuttack, published in 1893, estimated that 75 per cent. of the agriculturists remained almost always in debt. My predecessor in paragraph 58 of the last Annual Report estimated the proportion to be 50 per cent. Mr. Gupta has made a careful enquiry into this important subject in 11 villages of his subdivision, and has found that out of 536 tenants, no less than 370, *i.e.*, about 70 per cent., of the tenants were in debt.

56. The cause of this permanent indebtedness is said to be that the Uriya peasant lives beyond his means. Mr. Nagendra Nath Banerjee estimates that a cultivator holding 10 *mâns* of land has an annual income of Rs. 155, and spends Rs. 172. Mr. Gupta, similarly, after examining the income and expenditure of certain cultivators, finds their expenses to be in excess of their income.

57. I do not think that this is the correct explanation. Mr. Gupta estimates the income from land, but does not estimate other income which the cultivator occasionally derives from labour or otherwise. I cannot accept the theory that the agricultural population of Orissa habitually live beyond their incomes.

58. The true explanation of the chronic indebtedness of 70 per cent. of the cultivators seems to be this, that they have always been in the habit of getting indebted. The easy-going Uriya cultivator is less assiduous in bettering his condition and freeing himself from the grasp of the mahajan than the ordinary Bengali cultivator. So long as he has his land, he has credit with the mahajan, and he sees no reason why he should not borrow when he wants, and pay off when he can. I have no doubt, however, that after a longer period of settled rule, and after the railway line has been opened through Orissa, the Uriya cultivator will learn to be more provident.

59. Coming now to the subject of landless labourers, the construction of the new railway line has been, in Khurda as elsewhere, a great boon to them, for the time being. Mr. Gupta reports that local coolies were paid 3 annas a day, carpenters and masons 6 annas, and cartmen 10 annas a day. An additional anna all round was allowed at the ploughing and sowing time.

60. In paragraphs 63 and 64 of the last annual report, some mention was made of a class of farm labourers called *halias*, who are said to remain in a condition of semi-slavery. The *halia* is a willing bondsman, who borrows at the time of distress and offers to repay by personal services, which he seldom succeeds in doing. The account given by Mr. Gupta of this class, and of the steps he has taken to ameliorate their condition, is interesting, and is quoted below:—

"The real obstacle which stands in the way of *halias* regaining their personal freedom is the exorbitant interest which is charged on the money that is advanced to these men. It is generally much more than the miserable pittance of Rs. 12 or Rs. 15, which they get as an annual salary every year.

"At the recent meeting of all the leading sarbarahkars of the estate, which I held for the consideration of the condition of the Khurda people, it was agreed that the only practical good that can be done to the *halias* would be to induce the people of Khurda not to charge any interest from the *halias* on the money advanced to them. All the sarbarahkars present signed their names in a document by which they promised to forbear from receiving any interest from the *halias*. I have now instructed the kanungoes in their periodic visits of the villages to note the condition of these *halias* and report for censure any sarbarahkar who may be charging interest from the *halias*. The good example set by the sarbarahkars, it is hoped, will be followed by the other well-to-do people of the village."

61. While I appreciate the endeavours made by the Subdivisional Officer to give the poor *halia* a chance of rescuing himself, it would be incorrect to suppose that his condition is that of a helot. On the contrary, he is generally treated as a servant of the family in which he lives, and is not allowed to die of want, so long as his employer is not himself in difficulties.

62. A prolonged enquiry has been made in Khurda subdivision into the grave question whether, as a result of the free right of transfer possessed by tenants, the lower classes of cultivators are being dispossessed of their lands and turning labourers, and whether non-agriculturist money-lenders are getting possession of agricultural holdings. Mr. McPherson, late Subdivisional Officer of Khurda, judging from the large number of mutations of holdings registered in his office, apprehended that the class of labourers was increasing by a considerable recruitment from among the smaller tenantry. A more careful examination of the mutation cases has dispelled this apprehension. The number of sales of petty holdings has been large, but the instances of acquisition of petty holdings by cultivators have also been large, and there is no reason to apprehend that the land-owning cultivators are decreasing in number, or that the landless labourers are increasing.

63. A very satisfactory and exhaustive enquiry has been made by Mr Gupta on this point. He has extended the sphere of his enquiry over a hundred villages, situated in different parts of his subdivision, and has taken two dates, sixty years apart from each other, to compare the results. By means of such comparison he has found that the proportion of land-owning tenants has not decreased but has increased within these sixty years. I quote Mr. Gupta's remarks below :—

"Land may have changed hands, but the question whether there has been a speedy and rapid comparative increase in the number of the landless classes may be, as I have already said somewhere else, most satisfactorily solved by taking into account two points of time sufficiently removed from each other and then from statistical records of these periods to compare the ratio between landless and landholding classes at each of the two periods. In the note which I submitted to the Commissioner, I compared the figures—

(1) "For five villages collected at the last two settlements of 1885 and 1881. The result showed that the ratio of land-owning to landless men stood at 64·36 in 1885 and at 57·43 in 1881.

(2) "Of the same five villages I then took the figures collected at the last settlement and at the present time. The result showed that the proportion has remained stationary at 64·36 during the last 60 years.

"I have now examined the figures for no less than 100 villages in all the different parts of the estate collected at the last settlement and at the present time, and the figures show that whereas the proportion between the land-owning and the landless classes for these 100 villages at the last settlement was 63·7 to 36·3, to-day the ratio stands at 67·5 to 32·5. There has thus been perceptible decrease in the number of landless men."

64. This, I think, is as satisfactory evidence as the subject admits of. Much has been written from time to time on the supposed evils resulting from the unrestricted right of transfer possessed by tenants, apprehensions have been expressed that their holdings are going into the hands of non-agriculturist money-lenders, and proposals have been made in the interests of the raiyats to deprive them of the right of transfer, or in other words, of the marketable value of the only property which they possess. To such proposals and theories we can oppose the significant fact that in a large subdivision, which is the property of Government, the tenants have exercised this unrestricted right during a period of sixty years, and lands have not passed out of their possession to any extent into the hands of non-agricultural money-lenders and mahajans. I am persuaded that if similar enquiries were made in other parts of Bengal, it would be found that the right of transfer possessed and exercised by raiyats by custom in all parts of Bengal has been beneficial, not detrimental, to their interests. The unthrifty and unprovident individual comes to grief as among zamindars, but as a class the tenants are certainly better off by having a marketable value for their holdings than if the holdings had no such value.

65. With regard to the money-lenders (or rather paddy-lenders) and mahajans of Khurda, Mr. Gupta finds after a careful enquiry that about 80 per cent. of them are merely substantial raiyats and sarbarahkars, that they are nearly all residents in the estate, and that since 1885 only 20 men, who are non-residents, have bought lands in Khurda. The plain fact is that it does not pay an ordinary money-lender to buy raiyati holdings, unless he wishes to turn into a raiyat. There is no danger therefore in Bengal of raiyati holdings passing into the hands of non-agriculturist money-lenders.

66. The practice of subletting does not prevail to any large extent in Khurda. From a comparison of the figures of 20 villages Mr. Gupta finds that the total number of under-tenants has decreased from 672 to 484 within the last 15 years. It is clear therefore that the Khurda raiyats are not passing into the status of lazy middlemen. On the contrary, those who pay us rents are generally those who actually cultivate the land.

67. The average extent of a cultivator's holdings in Khurda has not been given in Mr. Gupta's report, but on a further reference to him, I am informed that it is about 4 *máns* or acres. This agrees approximately with the figure given by Mr. Sakhawat Hossein for the Kanika estate in paragraph 155 of his Settlement Report, which I quote below :—

"The practice of splitting holdings has since some time been permitted, and it cannot now be altogether stopped, and I do not see any valid objection to it. It is generally assumed that the subdivision of holdings leads to the reduction of their average size below what can support a family. This assumption is, to a great extent, gratuitous and opposed to common sense. No family can permanently starve, and consequently it cannot depend on a holding which is insufficient for its support. When a part of a holding is sold, it either goes to a new tenant or to an old tenant. In the former case it goes to one who has hitherto been supported by some means other than cultivation. If he goes in for cultivation as a sole means of support, he would naturally buy up as much land, though from different persons, as would enable him to live thereby. In the latter case, the old tenant simply adds to his old holdings. As a rule, the splitting of holdings does not lead to the reduction of their size, but what does the real mischief is over-population, against which there are no prudential checks. If a man having a holding just sufficient for one family gets four sons and in time four families, his holding is split up with a vengeance. The average size of holding held by each *thani* raiyat was 3¼ acres in the settlement of 1865-71, 3¼ acres in that of 1880-82, and now in the present settlement is 4·13 acres, showing that the free splitting of holdings, which has been permitted during the last 30 years, has not had the effect of reducing their average size.

"Then, it is sometimes held as a reproach to Indian tenantry that the raiyats have their holdings consisting of scattered plots. They have, however, very good reason for doing so. They require lands in different situations in order that they may have some for raising seedlings, some for growing early crops, and some for late crops. It would certainly not suit them and their mode of cultivation to have compact little farms. If a raiyat finds that he has more of one kind of land than he needs, he parts with it and gets a new bit elsewhere. The splitting of holdings does not injure the interest of the proprietor, and it is of real benefit to the tenants, and the continuance of the existing practice, subject, of course, to the proprietor's consent, should be permitted. This would no doubt make the work of maintenance of records difficult, but the difficulty is not insurmountable."

68. Mr. Sakhawat Hossein's remarks are important, and shows that the apprehensions sometimes entertained,—that the right of splitting their holdings exercised by raiyats will lead to their ruin,—are unfounded. The ordinary tenant in Bengal and Orissa may be trusted to know what is best for him, and will not reduce his holdings to less than what will maintain his family. He is careful to keep more than his three acres and a cow.

69. Before concluding my remarks under this section, I wish to add that it would greatly add to our knowledge of the actual state of the cultivating classes in Bengal if enquiries, on the lines indicated above, were instituted every year in all large Government estates, and also in other large estates under the management of the Court of Wards. It would greatly help us in the work of administration as well as of legislation to know accurately the condition of the cultivators in all districts of Bengal, their annual income and indebtedness, the size of their holdings, the custom of transfer of holdings, the proportion of landless labourers, and their wages and condition. Subdivisional officers managing large Government estates and intelligent managers under the Court of Wards could deal with these questions with much more intimate knowledge than officers appointed to obtain statistical information from time to time; and a record of facts compiled by the former from year to year would dispel much ignorance which still prevails on the subject.

* * * * * * * * *

VII.—PRICES OF FOOD AND LABOUR.

74. Appendices III and IV show the prices of food-grains and wages of labour which prevailed in each of the district head-quarters of this Division during the last fortnight in March 1896 as compared with the corresponding

periods of the preceding two years. As the outturn of rice was very good, the price was cheaper after the last harvest than it was during the last 10 years, as the following table will show:—

			Sr.	Ch.	
1886-87	...	...	22	1¾	per rupee.
1887-88	...	...	22	1¼	„
1888 89	...	...	19	13	„
1889 90	...	...	17	15	„
1890-91	...		19	8½	„
1891-92	...	...	15	5	„
1892-93	...	...	15	14	„
1893 94	...	...	16	9	„
1894-95	...	...	22	2	„
1895-96	...	...	25	12	„

75. The wages of labour remained stationary in Cuttack. In Balasore there was some increase in the wages of common masons, superior carpenters, and coolies, and in Puri there was a similar rise in the wages of only common masons and coolies. The increase in wages observable in the case of these classes of labourers is principally due to the demand for workmen on the railway works in progress in these districts.

* * * * * * *

XVII.—CONDITION OF THE DIVISION AS REGARDS LAND AND LAND REVENUE ADMINISTRATION.

170. The prescribed Appendices XVIII to XXV submitted with this report give the required statistics under this head.

Number of estates.

171. The total number of estates in the Division exceeded that of the previous year by 77, being 6,395, against 6,318 in 1894-95. The increase was chiefly due to partition, as well as to inclusion in the revenue roll under separate numbers of police lands, in accordance with the instructions contained in rule 4, Chapter II, page 2 of the new Tauzi Manual, and to resumption and assessment of life-grant revenue-free tenures found invalid on enquiry.

Total demand and collection.

172. The total demand in the several districts was Rs. 19,63,641, of which Rs. 19,28,991 was collected and Rs. 2,498 remitted, leaving a balance of Rs. 32,152. The percentage of total collection on total demand was 98·02, against 98·99 in the previous year, showing a satisfactory increase.

Current demand and collection.

173. The current demand of all classes of estates put together rose from Rs. 18,59,523 in 1894-95 to Rs. 18,59,928 in the year under report, showing a net increase of Rs. 405. This increase is due to resettlement of waste *rasadbandi* and other lands, as well as to resumption of invalid life-grant revenue-free tenures, and inclusion of police lands in the revenue-roll under separate numbers, as noticed above. The current collections from all classes of estates amounted to Rs. 18,28,701, against Rs. 17,52,313 in 1894-95. The percentage of this on the current demand amounted to 98·32, which is much in excess of that in the preceding year, which was 94·23.

Arrear demand and collection.

174. The arrear demand amounted to Rs. 1,03,713, out of which Rs. 1,00,250 was collected, giving a percentage of 96·7, against 81·7 in 1894-95.

Remissions.

175. The remissions granted during the year amounted to Rs. 2,498, of which Rs. 386 were remissions of grace, Rs. 1,910 remissions of right, and Rs. 202 were nominal remissions granted for relinquishment by raiyats of their holdings on account of desertion and death.

Balances.

176. The total balance at the close of the year amounted to Rs. 32,152, against Rs. 1,03,542 in the previous year, of which Rs. 9,188 was doubtful and irrecoverable and Rs. 22,964 was under recovery.

Khas mahals.

177. The number of estates under direct management in the Division was 42. Of these, 13 petty estates were sold during the year under the orders of the Board at a price of Rs. 1,923.

178. The gross demand of this class of estates during the year amounted to Rs. 5,03,323 and the collections to Rs. 4,69,411, which gives a percentage of above 90 per cent. A sum of Rs. 13,771 was expended in improvement works of miscellaneous and sanitary nature. The condition of the tenantry was generally good, except in flooded tracts, where, owing to loss of crops, it was otherwise. Suitable remissions were made to meet individual cases of distress. The most important of the Government estates in this Division is that of Khurda, in the Puri district, the settlement of which, made 15 years ago, is under revision. An endeavour which was partially successful was made by the Subdivisional Officer of Khurda to enlist sarbarahkars and other villagers in the cause of sanitary and other improvements in their villages.

Road and public works cesses.

179. Out of a total gross demand of Rs. 3,03,901, a sum of Rs. 2,74,120 was realized and Rs. 103 remitted, leaving a balance of Rs. 29,678, or 9·76 of the gross demand, outstanding at the close of the year. The collections include Rs. 8,283 paid in advance for the year under report, and also the payments made in advance for future periods. The percentage of net balance on gross demand was, as in the previous year, lowest in Puri (2·38) and highest in Cuttack (16·28). Compared with the previous year, the collections show an improvement, being 90·20, against 89·01 per cent. in 1894-95.

180. The collection of petty demands by kanungoes seems to have been satisfactory in Cuttack and Balasore, but it is reported to have been retarded in Puri by delay in the preparation of arrear lists which under the new Tauzi Manual have to be prepared at the end of the second kist.

Remittance of land revenue and cesses by money-orders.

181. A sum of Rs. 1,09,691 was remitted by 10,377 money orders during the year, against Rs. 1,07,836 by 10,126 orders in the previous year. The divisional result was thus an increase in postal transactions, though there was a decrease both in the number of money-orders and the amount remitted in Cuttack, as compared with the previous year, which is attributed to the causes enumerated in paragraph 207 of the previous year's report. Many proprietors of large estates prefer to make payments through their agents, but the money-order system is a real boon to small proprietors who have no agents, and who are saved the trouble of long journeys and of dancing attendance on our low-paid amla, who are not conspicuous for their honesty. The money-order system is therefore as popular with small proprietors as it is unpopular with our amla in the Collectorates.

182. No money-order was refused during the year.

183. The Government have by their Resolution No. 503, dated 12th December 1895, authorized the payment of rent by money-orders in the Puri district from 1st January 1896, and the number of such money-orders issued was 3 for an amount of Rs. 16. The success or otherwise of the working of this system cannot be judged as yet.

Operation of the Sale Law.

184. The number of estates or shares of estates which become liable to sale for non-payment of Government revenue during the year was 677, against 680 in 1894-95. Of these, only 24 (17 whole and 7 shares) were actually sold, giving a percentage of 3·5 to the total number which became liable to sale, against 5·5 in the previous year. The revenue demand of the estates sold was Rs. 84,170, and the arrears for which they were brought to sale amounted to Rs. 1,57,282. The amount of purchase-money was Rs. 1,82,000, or about $2\frac{1}{3}$ times the Government revenue. Compared with the previous year, the amount for which defaults were made show a very considerable increase. This is due to the fact that the estate of Kotdesh, in the Puri district, with a Government revenue of Rs. 81,082, defaulted since April 1894, and the sale of the estate was postponed for various reasons till now. The fact of this estate having been sold for Rs. 1,64,000 only partly accounts for the low proportion of the purchase-money to Government demand of the estates sold in the Division. The sale-price of

the estate in question was, however, not inadequate, as it is six times the ascertained income of the estate. Another fact which is said also to have contributed materially to reduce the prices of estates sold is the re-settlement of the Division now in progress, owing to which the public are not forward in purchasing temporarily-settled estates.

185. The number of estates exempted from sale was 653, with a Government revenue of Rs. 3,23,440. Appendix XIX supplies details of the dates of sale, &c.

186. There were 9 appeals preferred against sales during the year, viz., 7 from Cuttack and 2 from the Puri district. Of the 7 Cuttack appeals, 2 were dismissed, 1 was recommended to Government for annulment of sale, and 4, instituted at the close of the year, are pending. The 2 appeals from Puri were dismissed.

Working of the certificate procedure.

187. The total number of certificates filed during the year, excluding those received from other districts, was 12,781, against 14,598 in 1894-95. In 5,227 cases payments were made on issue of notices, and in 7,096 cases on attachment of property, while in 301 cases recourse was had to actual sale. In 15 cases demands were satisfied on issue of warrants. In the 3 cases in which the debtors were imprisoned, all were released without payment of their debts. In course of my inspection of the Cuttack road-cess and certificate offices, I noticed that numerous certificates had been issued somewhat recklessly for insignificant sums, *down to one pice*. This appears to me to be an abuse of the certificate procedure.

Surveys and settlements.

188. The attestation and assessment work in connection with the Divisional settlement was in progress in the Balasore district during the year under report.

* * * * * * *

XXIII.—RAILWAYS AND OTHER PUBLIC WORKS.

264. During the year under report work was started in connection with the branch line of railway from Jutni to Puri, and the Orissa branch of Bengal-Nagpur Railway, in addition to the East Coast Railway already in progress. The following is a brief account of the work done on each line.

East Coast Railway and its branch to Puri.

265. A Special Deputy Collector was appointed to finish the land acquisition work for this line in the districts of Cuttack and Puri. The work on the main line in the district of Puri was pushed on vigorously, and the portion from Khurda Road station southwards was opened for traffic towards the close of the year. The whole of the branch line (from Khurda Road to Puri) was surveyed, and the railway authorities were put in possession of the area except a few acres of homestead land. It is expected that the branch line from Khurda Road station to Puri will ere long be open for traffic.

Bengal-Nagpur Railway.

266. Work was started in the last winter. Two Special Deputy Collectors were appointed to acquire land in the districts of Cuttack and Balasore, and arrangements have been made to put the railway authorities in possession of the lands as soon as possible. Considerable progress has been made in both the districts within a short time. The District Engineer of Balasore hopes that by the beginning of 1897 rails will have reached the Subarnarekha river.

* * * * * * *

XXX.—LOCAL SELF-GOVERNMENT INSTITUTIONS.

MUNICIPALITIES.

335. *Cuttack.*—There are three municipalities in this district, viz.—Cuttack, Jajpur, and Kendrapara. The Civil Surgeon of the district is the Chairman of the first, and the Subdivisional Officers are the Chairmen of the other two.

336. The table below gives the number of meetings held and the percentage of attendance in each:—

Names of Municipalities.	Number of members, including Chairman.	Number of meetings held.	Percentage of attendance.
1	2	3	4
Cuttack ...	18	21	48·1
Jajpur ...	12	15	72
Kendrapara ...	12	15	53·92

337. In Cuttack there are 18 Commissioners, of whom 12 are elected and 6 nominated. Of the nominated Commissioners, Babu Lal Bihari Ghose having died, Babu Harry Ballabha Bose was appointed in his place by Government, and on the transfer of Dr. Zorab, the late Civil Surgeon of the district, Dr. Meadows was elected as Chairman in his place. Of the elected Commissioners, Babu Girish Chandra Gupta having been transferred, his place was filled up at a bye-election held after the close of the year.

338. The Commissioners are said to have taken great interest in the municipal work. No meeting was adjourned for want of a quorum.

339. In the Jajpur Municipality of the 12 Commissioners, 2 died during the year, and their places were duly filled up. The number of meetings adjourned for want of a quorum was 3, against 2 in the preceding year.

340. In the Kendrapara Municipality 15 meetings were convened during the year under report, and 2 of these were adjourned for want of a quorum. The Municipal Commissioners are said to have taken interest in the affairs of the Municipality.

341. The receipts and expenditure of each municipality as compared with the preceding year are shown in the subjoined table:—

Names of Municipalities.	Receipts.		Expenditure.	
	1894-95.	1895-96.	1894-95.	1895-96.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
Cuttack ...	47,487	47,726	47,370	47,349
Jajpur ...	4,604	5,046	5,189	4,484
Kendrapara ...	7,827	8,046	7,520	7,743

342. With regard to the sanitation of the town, Mr. Growse, the Collector, writes:—

"The sanitary condition of the town has been satisfactory, and the Sanitary Commissioner's recent visit disclosed nothing very glaringly wrong. The question of providing the "town with a filtered water-supply has been voted beyond the means of the Municipality, and, "as at present advised, I doubt whether the Municipality would be justified in incurring the "great expense necessary."

343. The total amount expended in the Jajpur Municipality during the year under report was Rs. 4,484. The sanitary charges amounted to Rs. 1,677, against Rs. 2,074 in the preceding year.

344. The sanitary condition of Kendrapara town is said to have been good on the whole. Roads were kept clean, two unhealthy private tanks were re-excavated, and steps were taken to fill up ditches and *nalas*. The health of the

town was good throughout the year except in September and October, when cholera broke out in 30 villages out of 64 in the town. The total number of deaths occurred was 103. All possible measures are reported to have been adopted towards checking the disease.

345. As regards the administration of this Municipality, Mr. Growse remarks, that municipal administration seems to be more unpopular and meets with more opposition in Kendrapara than in the other towns.

346. *Balasore.*—In this Municipality there were 18 members, as in the preceding year. Out of these 5 were official and 13 non-official. The number of meetings held during the year was 14, against 19 in the preceding year, and the percentage of attendance was 38·88, which is very low. Of the 14 meetings, there were 2 at which there was no quorum. Babu Udoya Nath Kar, a member of the Municipality, is said to have attended no meetings at all during the year.

347. The total receipts and expenditure of the year under report were Rs. 17,203 and Rs. 17,046, against Rs. 15,794 and Rs. 16,047 respectively in the preceding year. The increase in the receipts was attributed to the collection of latrine-tax and of subscriptions and donations from the public for the maintenance of the Balasore Pilrim Hospital, which was made over to the Municipality during the year under report. In addition to this, a larger amount of fees under section 261 of the Municipal Act is said to have been realized during the year than in the preceding year. The increase in the expenditure is said to be due to charges for sanitary works executed during the year and for the maintenance of the Pilgrim Hospital.

348. *Puri.*—The Municipal Board of this town consists of 15 members, of whom 10 are elected and 5 appointed by Government. The number of meetings held during the year under report was 14, against 16 in the preceding year, and the percentage of attendance 50·6. No meeting adjourned for want of a quorum.

349. The total receipts and expenditure during the year under report were Rs. 33,815 and Rs. 34,233, against Rs. 35,386 and Rs. 38,014, respectively, in the preceding year.

350. The total expenditure shows a decrease, which is said to be due to the fact that the amount expended in the last year included sums spent on the Bara Danda drainage work, whereas no such large work was undertaken during the year under report.

351. The main roads of the town are said to be as clean as can be expected, but the bye-lanes are not so It is said that more drains are required to serve as feeders to the Bara Danda drain, as reported last year.

352. The main source of water-supply of the town is wells and tanks. Some of these are reported to have been in a filthy state. The worst of these unclean tanks are the Markund and Swetgunga, and attempts have recently been made to clean them and remove the silt. Mr. Bell, the District Officer, writes:—

"The Markund tank with the Swetgunga is filthy beyond description, and is now being "dewatered and the silt is being removed. The cleansing for the first time in its history of "this ancient tank, which is overcrowded at ordinary seasons, and very much overcrowded "at festivals, cannot but be of great benefit. Great credit in this connection is due to "Dr. Banks, the Civil Surgeon, to whose energy and perseverance it is largely due that the "difficulties inseparable from such an undertaking have been successfully combated."

353. I entirely agree with the District Officer in the remarks he makes about Dr. Banks, an officer who takes much interest in his municipal work, and has worked with the utmost zeal to improve the sanitary condition of Puri town Credit is due to him for having cleaned the Markund tank. The attempt made, however, to dewater and clean the Swetgunga tank in May last was a failure, as the pump, I understand, was not powerful enough for the purpose. As the rains have now set in, the tank cannot be cleaned, I am afraid, till the next dry season.

District Boards.

354. The statement below shows the number of members, the number of meetings held, and the average percentage of attendance of the members of the District Boards during the year under report:—

Name of district.	Number of members.	Number of meetings.	Average percentage of attendance.
1	2	3	4
Cuttack ...	21	14	46·6
Balasore ..	16	13	46·15
Puri ...	13	21	30·7

There was a great falling off noticeable in the average percentage of attendance against Puri. This is said to be due to non-attendance of certain non-official members owing to their illness.

355. *Cuttack.*—The average attendance of the Jajpur Local Board shows a decided improvement, being 6·3, against 4·7 in the preceding year. The average attendance of the Cuttack and Kendrapara Local Boards was about the same as in the preceding year.

356. The number of Committees attached to the Cuttack District Board is four, viz.—(1) Finance, (2) Education, (3) Public Works, including ferries and pounds, (4) Sanitation. The Committees appear to have done useful work, and held altogether 36 meetings during the year.

357. The total receipts and expenditure of the District Board during the year under report were Rs. 1,10,093 and Rs. 1,09,373, against Rs. 1,19,314 and Rs. 1,22,674 respectively in the preceding year.

358. *Balasore.*—There are four Committees attached to the District Board, and the number of meetings held by them was 29, against 30 in the preceding year.

359. The powers delegated to the Local Boards are said to have been well exercised.

360. The total receipts and expenditure during the year under report amounted to Rs. 71,094, and Rs. 6[illegible],177, against Rs. 75,691 and Rs. 71,900 respectively in the preceding year.

361. *Puri.*—The total receipts and expenditure of the District Board during the year under report amounted to Rs. 59,714 and Rs. 62,083, against Rs. 60,696 and Rs. 50,647 respectively in the preceding year.

362. The Board appears to have spent a fair amount of money on a certain number of new useful works.

363. The Local Boards of the district have the charge of the following branches of administration, viz.—

(1) Pounds.
(2) Ferries.
(3) Village roads.
(4) Khurda Dispensary.

364. Mr. Growse says of the Cuttack District Board :—

"The Board has worked well and 'kindly,' and it is a pleasure to work with it."

Mr. De says of the Balasore District Board:—

"The District Board and the Local Boards have worked in a generally satisfactory manner."

Mr. Bell says of the Puri District Board:—

"I will content myself with reiterating my predecessor's opinion of last year that the Board are quietly doing a good deal of useful work."

365. I have always considered it a clear gain to the cause of good administration to associate non-official gentlemen with us in our work, and the

loyalty, intelligence, and local knowledge with which these gentlemen have worked deserve recognition, and have made local self-government a success in these provinces. The question of the formation of Union Committees is now under the consideration of Government, and reports have been called for from district officers and will shortly be submitted. There is much room for the extension of local self-government in this direction. Union Committees, if carefully formed and properly managed, will form a sort of link between administrative officers and the people, which at present does not exist. District and subdivisional officers will find themselves more in touch with the people through Union Committees than they now are, and will obtain material help from them, not only in the work of sanitary and other improvements in villages, but also in their administration and judicial work.

* * * * * * *

XXXVII.—GENERAL REMARKS.

400. I have very few remarks to make under this head, as I have not been a year in this Division yet.

The most important fact in the history of the year is the opening of the railway line. The line from Khurda Road, southwards to the Madras Presidency, is open for traffic, and the line northwards to Calcutta is under construction. Orissa will witness great changes when this line is completed. The country will become more accessible, and there will be greater facilities for emigration and immigration. Export and import trade will receive an impetus, and probably the wages of labour and the prices of food-grains will be somewhat affected. The majority of pilgrims will come by rail, and the annual outbreak of cholera along the pilgrim route will probably be stopped. And the fact that Cuttack will be about 12 hours' journey from Calcutta will, indirectly, have its salutary influence on the progress of this Division.

Another fact which is probably receiving even more attention from the people at the present moment, is the re-settlement of the Division, which is now in progress. More than three-fourths of this Division consist of temporarily-settled estates, and all these estates are under re-settlement. Zamindars all over the Division are naturally watching these operations with interest, and are expecting the decision of the Government as to the percentage of the assets which will be left to them, with eagerness and anxiety.

Two successive good harvests have, for the time being, improved the condition of the agricultural people, and the Railway lines under construction give ample employment to labourers. The present condition of the people, therefore, is comparatively good. The people of Orissa are a quiet law-abiding people, not given to crime, and the year under review was marked by a perceptible decrease in crime throughout the Division, owing to the good harvests.

The re-organisation of the Chaukidari System, the re-organisation of the Patwari System, and the formation of Union Committees are important measures under contemplation. If these measures are adopted and carried out with due care, they cannot help proving beneficial to the people.

CONDITION AND PROSPECTS OF CROPS IN THE PATNA DIVISION.

The 16th October 1896.—The following papers are published for general information.

M. FINUCANE,
Offg. Secy. to the Govt. of Bengal.

No. 565G., dated Bankipore, the 8th October 1896.

From—J. A. BOURDILLON, Esq., Offg. Commissioner of the Patna Division,
To—The Secretary to the Government of Bengal, Revenue Department.

WITH reference to Government order No. 821T.—R., dated the 30th ultimo, and in continuation of my letter No. 119Ct. of the 25th idem, I have the honour to submit the following report on the condition and prospects of crops in the districts of this Division for the fortnight ending on the 3rd instant.

GENERAL REMARKS.

2. During the period under report there has been no rain anywhere, except less than half an inch at Barharwa in the north-west of the Bettiah subdivision in Champaran. From about the 20th to the 25th, and again during the last few days, a strong west wind has been blowing in the middle of the day, which has had the effect of greatly drying the land and withering the standing crops.

3. The period covered nearly corresponds with that of the Hathiya asterism (September 25th to October 10th), and is therefore one in which plentiful rain is expected and is required to keep alive the *kharif* and to moisten the land so as to enable the cultivators to begin sowing the *rabi*. In those districts where water is carefully stored, *e.g.*, Gaya and parts of Shahabad and Patna, the standing crops up to date are in good condition, and will in any case give a fair return. Further, in all the area commanded by the Sone canals the *kharif* crops are magnificent. Elsewhere rain is badly needed, and if it does not fall within the next few days the standing crops will suffer greatly, and the area of *rabi* sowings will be much contracted.

4. I have just returned from a visit to Dehree and the Sone canals, and have spent three days in Mr. Buckley's company. Every effort is being made to work the canals to the best advantage, and not a drop of water is being wasted which could be profitably used for irrigation.

5. As regards prices, there has been a sharp rise in the price of all grain almost everywhere within the last week, which is due to two causes—(1) the practical certainty that the Hathiya rains have failed, (2) large purchases made for despatch to the North-Western Provinces. There have been some ebullitions of popular feeling which will be noticed below in their proper places, but after some oscillation prices have steadied down for the present and confidence has been restored.

6. All the information that I have been able to obtain, both official and non-official, points to the fact that there is a sufficiency of grain in the Division, and what is needed is money to buy it with. For this reason I think that before long test relief works will have to be opened almost everywhere in order to give work to the unemployed. These will take at present the form of repairs to roads or construction of new roads in accordance with the usual civil works programme of the District Boards. Large quantities of earthwork have to be executed on the projected railways in Gaya, Shahabad, Muzaffarpur and Darbhanga, which will employ thousands of work-people through the winter. I now turn to make a few remarks on the condition of the different districts.

7. *Patna.*—The Collector reports that rain is not urgently wanted; but if it falls within a week, the estimated outturn of winter rice will be 12 annas, otherwise the crop will not exceed an 8-anna one, and in many places it will be as low as 6 annas. The floods in the south and south-west of the Bihar subdivision, referred to in my last report, have caused very little damage and will lead to no distress. On the contrary, the area inundated by them is a *rabi* country, and the floods have supplied the necessary moisture. The event of

this week has been the sharp rise in prices all over the north of the district and in the case of all classes of food-grains.

8. The local *goladars* in Barh and Phulwari closed their golas to retail sale about the 30th ultimo, and the people were put to great straits to obtain grain. The Collector has pointed out to the *goladars*, as far as possible, the danger they are running in pursuing this policy, and has advised them to sell by retail as before. In this he has been very successful. Mr. Inglis also held a public meeting in the city on Sunday, the 4th, to consider the situation, at which it was decided to raise funds privately to aid the necessitous by selling small quantities of grain at a somewhat lower rate than that quoted by the regular dealers. I have impressed on Mr. Inglis that this must be treated as an entirely private arrangement, and at my request he has withdrawn all officials from the managing committees. Government is therefore in no way committed to this charitable policy. I have in a separate letter reported on the ebullitions at Dinapore and elsewhere.

9. *Gaya.*—Prices have risen, and common rice is now selling at 9 seers per rupee. During the last fortnight I have traversed the whole district, and have satisfied myself that for the present there is nothing to fear. While I was in Gaya there were clamorous crowds asking for a Government rate to be fixed for the sale of grain: this was of course rejected. After I had left on Sunday, the 4th, there was an alarm of *loot*, but the Magistrate and District Superintendent of Police had already taken precautions, and the police were so quickly on the spot that nothing occurred. The price of common rice, which was 12 seers up till the 1st, when I left, rose to 9 seers by the 5th, and has there stayed.

Mr. Savage has asked the Mohunth of Budh-Gaya, who has large hoards of grain, to come forward and sell it to the poor in small quantities on easier terms than the Banias.

10. *Shahabad.*—Owing to the causes enumerated in paragraph 5 above, and specially to the operations of purchasers from the North-Western Provinces, the price of grain at Arrah rose suddenly on the 30th ultimo and 1st October. On the latter date the grain-dealers suspended retail sales, and there was considerable apprehension of a grain riot. In these circumstances the Officiating Magistrate, Mr. Egerton, took the unwise step of forbidding the exportation of grain, by an order under section 144, Criminal Procedure Code, dated the 2nd October. Fortunately, however, he reported his proceedings to me by telegram, and I forthwith cancelled his order by wire. Both then and since I have impressed upon him that no direct interference with trade can possibly be allowed, although he is at liberty to use persuasion and advice as much as he pleases to induce the Banias to sell at fair rates. Police protection has been given to those grain-dealers who asked for it, and I have directed the Magistrate to realise the cost under section 13 of the Police Act, and also to enlist special constables if required. The latest reports state that up to yesterday all was quiet again, and the Magistrate is now taking proper steps to maintain order.

11. *Saran.*—Mr. Wheeler says that further reports and enquiries seem to show the general yield of the *makai* crop has not been much more than 6 annas for the district as a whole. The rice is withering away daily, and even were good rain to fall now, a large proportion must be lost.

12. He also reports that within the last few days he has received several complaints from Chapra that the Banias do not sell at the prices they report, and that they are inflating prices unduly, sometimes changing the rate two or three times in the day. Agents from the North-Western Provinces are also in the district buying up grain for exportation, and this has also tended to raise prices. Applications have been made to the Collector to interfere, which he has of course declined to do.

13. A meeting of the District Board was held on the 3rd instant to discuss what preliminary measures were advisable in order to enable the Board to start relief works as soon as the necessity for them was demonstrated. It was resolved—

(*a*) to empower the Chairman to stop any works now in hand which are not of urgent necessity;

(*b*) to request all planters as far as possible to execute the repair works made over to them on a system of *haziri*, so as to enable them to gauge the demand for labour;

(*c*) to circulate the authorised programme of relief works for the suggestions of members.

These moderate proposals have my approval.

14. *Champaran.*—Under date the 5th instant, Mr. Macpherson, Collector of Champaran, writes that there was a fall of ·37 of an inch at Barharwa, and that all over the district much has been done to irrigate the crops by damming the hill streams. His opinion is that the winter rice crop continues to hold out, and it will be saved if there is rain during the Hathiya asterism. In one or two tracts the winter rice crops will be very poor even if good rain falls.

15. During the first week of the fortnight prices fell somewhat owing to new grain (*bhadoi*) coming into the market, but during the last week there has been a sharp rise, and common rice is selling for 11 seers at Motihari and 12½ seers at Bettiah, instead of 14 or 15 seers, which is the usual rate at this time of the year.

16. *Muzaffarpur.*—The winter rice crop is daily deteriorating for want of rain, which is most urgently needed to prevent the plants from withering. Prices are steadily rising, and rice has already reached almost famine rates. No rioting or disturbance is reported.

17. *Darbhanga.*—There was no rain during the fortnight, and a good fall is urgently required. If there is rain, there will be very fair paddy over the greater part of the district; otherwise it will be poor everywhere, and there will be scarcely any in the west and north-west of Madhubani. Mr. Carlyle thinks there is some risk of prices rising so high as to cause a good deal of distress, as prospects are so bad in other parts of India. He was with me here on the 6th, and returned to Madhubani the same night to watch the development of affairs.

18. *Conclusion.*—In view of the disturbed state of public feeling, and the risk of grain riots should the market grow tighter, I have thought it right to cancel all leave for the Puja holidays, and to ask District and Subdivisional Officers to remain at or near their head-quarters. These orders have been loyally accepted, and indeed in most cases the District Officers, at any rate, had anticipated my wishes. A concession has been allowed in one or two special cases.

19. You will recognise that this is not the report required by section 9 of the Famine Code. I cannot say that "scarcity actually prevails", or that "famine is imminent" in any part of the Patna Division; but if no rain falls by the end of the Siwati asterism, which closes on the 6th November, there will be no doubt of the matter. Meanwhile, I am issuing a circular to all District Officers, calling their attention to section 11 of the Famine Code, and instructing them to start test works carefully as they find necessary.

20. I propose to submit a further report on or about the 22nd instant, and will remain at my head-quarters throughout the holidays.

No. 940T.—R., dated Darjeeling, the 15th October 1896.

From—M. FINUCANE, Esq., Offg. Secy. to the Govt. of Bengal, Revenue Dept.;
To—The Commissioner of the Patna Division.

I AM directed to acknowledge the receipt of your letter No. 565G., dated the 8th October 1896, reporting on the condition and prospects of the crops in the districts of the Patna Division.

2. The Lieutenant-Governor fears that the fact that no rain has fallen since the date of your report has made the outlook even more gloomy than you describe it to be. There can even now be no doubt that the serious rise in prices is pressing with great severity upon the labouring classes, and no time should, in His Honour's opinion, be lost in offering work on the district roads under the conditions prescribed in section 56 of the Famine Code, treating these for the present as "test works" under section 11. The District Boards must now be called upon to revise their budgets by cutting out all avoidable expenditure and appropriating all the funds they can find to relief works proper. There will certainly be full demand for all the work that the Boards

can supply. Should no rains fall before the end of this month, there can be little doubt that a serious failure of *aman* rice and *rabi* crops will be inevitable, and the Local Government will have to largely supplement the Board funds. It is fortunate that the railway extensions both in South and North Bihar are likely to supply work for a large section of the population during the coming winter. You should certainly submit the report prescribed by section 9 of the Famine Code by the first week in November if the rain still holds off.

3. Meantime all executive officers should carefully study the Famine Code and the history of past scarcities The Magistrates and Police must keep a sharp look-out for any indications of rioting, and take prompt steps to suppress it. The standing crops must be carefully watched, and their condition reported weekly in detail of local areas. The stocks of food-grain should be enquired into. Every effort should be made to utilise whatever water-supply there may be from hill streams, tanks and wells, for purposes of irrigation. Loans for well-sinking should be freely given. The officers of the Opium, Survey, and Settlement Departments may be utilised for the purposes of these local enquiries. This need not at present interfere with their ordinary duties.

4. The Lieutenant-Governor approves of the action so far taken by yourself and the District Officers as now reported, except in the case of the Officiating Collector of Shahabad, whose order forbidding exports of grain under section 144 of the Criminal Procedure Code was rightly cancelled by you as both ill-advised and illegal. As regards the action taken by the District Board of Saran, the Lieutenant-Governor approves of it; but with reference to the execution of work by planters on a system of *haziri*, I am to point out that no relief work can under the Code be paid by daily wage irrespective of task. The Code rules must be strictly followed in all district relief works, whether test or other.

5. The Lieutenant-Governor will be prepared, if the situation becomes worse, to place an officer on special duty to assist you. Meantime the Director of Land Records and Agriculture has been instructed to proceed to Bihar at an early date.

LIBERALITY OF CERTAIN GENTLEMEN OF MYMENSINGH AND DACCA.

No. 1159G., dated Dacca, the 30th September 1896.

From—The Commissioner of the Dacca Division,

To—The Secretary to the Government of Bengal, General Department.

THE gentlemen named in the margin propose to commemorate the recent visit to Dacca and Mymensingh of His Honour the Lieutenant-Governor of Bengal by the benefactions noted in the annexed list. I have the honour to request that the liberality and public spirit thus exhibited by these gentlemen may be acknowledged by the Government.

1. Raja Rajendra Narayan Roy Bahadur, of Bhawal.
2. Raja Surjya Kanta Acharjee Bahadur, of Muktagacha.
3. Rai Jogendra Kisor Rai Chowdhury Bahadur, of Ramgopalpur.
4. Rai Pran Sankar Chowdhury, Zamindar, Teota.
5. Babus Janaki Nath Roy and Sitá Nath Roy, of Bhagyakul.

NAME OF DONOR.	Amount of donation.	Work on which to be spent.	
1	2	3	
Raja Rajendra Narayan Roy Bahadur, of Bhawal.	Rs. 40,000	For the extension of the Buriganga bund towards the west.	Rs. 20,000
		For the extension of the Simpson Ward attached to the Dacca Mitford Hospital.	5,000
		For supply of good water to his tenants of Bhawal by excavating ponds and wells under supervision of the District Board of Dacca.	15,000
			40,000
Raja Surjya Kanta Acharjee Bahadur, of Muktagacha (Mymensingh).	7,600	For the construction of and fitting the same with necessary furniture an Eye Ward to be attached to the Nasirabad Dispensary, to be called "Mackenzie Eye Ward." Cost of maintenance to be borne by the donor.	
Rai Jogendra Kisor Rai Chowdhury, of Ramgopalpur (Mymensingh).	11,000	For the excavation of tanks throughout the district by the District Board of Mymensingh. The tanks to be called after the name of His Honour the Lieutenant-Governor.	10,000
		For the extension of the water-works for the benefit of the residents of the Government Estate Wari (Dacca).	1,000
			11,000
Rai Pran Sankar Chowdhury, Zamindar, Teota.	1,000	For the re-excavation of an old tank in the head-quarters of the Maniekganj subdivision and building a masonry ghat in the same under the supervision of the Subdivisional Officer.	
Babus Janaki Nath and Sita Nath Roy, of Bhagyakul.	5,000	To the District Board of Dacca for the excavation of two tanks alongside the Srinagar road for drinking purposes.	

MOHIM CHANDRA GHOSH,
Personal Assistant, for Commissioner.

No. 962T.M., dated Darjeeling, the 12th October 1896.

From—H. H. RISLEY, Esq., C.I.E., Secy. to the Govt. of Bengal, Municipal Dept.;
To—The Commissioner of the Dacca Division.

I AM directed to acknowledge the receipt of your letter No. 11596T., dated the 30th September 1896, in which you report that the gentlemen named in the margin have proposed to commemorate the recent visit to Dacca and Mymensingh of His Honour the Lieutenant-Governor of Bengal by executing certain works of public utility specified in the list annexed to your letter, and request that the liberality exhibited by them may be acknowledged by Government.

1. Raja Rajendra Narayan Roy Bahadur, of Bhawal.
2. Raja Surjya Kanta Acharjee Bahadur, of Muktagacha.
3. Rai Jogendra Kisor Rai Chowdhury Bahadur, of Ramgopalpur.
4. Rai Pran Sankar Chowdhury, Zamindar, Teota.
5. Babus Janaki Nath Roy and Sita Nath Roy, of Bhagyakul.

2. In reply, I am desired to request that you will be so good as to convey to these gentlemen an expression of His Honour's thanks for the public spirit and liberality. This correspondence will be published in the *Calcutta Gazette* for general information.

WEATHER AND CROP REPORT.

For the week ending the 19th October, 1896.

Burdwan.—Rainfall nil all over the district. Weather hot and fair. Rain badly wanted for the standing *aman* which is withering in different parts of the district. Sugarcane doing well. The sowing of *rabi* is being retarded for want of rain. Fodder and water sufficient. Common rice selling as follows:—

	Srs.	
Sadar	12 to 15	per rupee.
Kalna	12	
Katwa	12 to 13½	
Raniganj	10	

Birbhum.—Weather fine. No rain since September. Is is greatly needed as the crops are suffering. Harvesting of *aus* proceeding. Rice selling at 12 to 13 seers per rupee.

Bankura.—No rain. It is badly wanted for *aman*. Prospects gloomy. Probable outturn of *aus* 8 to 10 annas. Water and fodder sufficient. Common rice selling at 11 to 12 seers per rupee. Price is daily rising for heavy exports.

Midnapore.—No rain. Weather seasonable and cool for this time of the year. Rain is wanted badly. Paddy is suffering very much for want of moisture. Prospects of sugarcane and *til* hopeful wherever there is moisture; likewise indigo is being sown in lands showing moisture. Heavy daily exports of paddy and husked rice have raised the price from 14 to 10 seers per rupee. Cattle-disease reported from Binpur. Fodder and water sufficient Coarse rice selling as follows:—

	Srs.	
Sadar	10	per rupee.
Contai	14 to 16	
Tamluk and Ghatal	12½ to 14	

Hooghly.—No rain throughout the district. Weather hot during day; cool at night. *Aus* is being cut. *Aman* withering for want of rain. Rice sells average at 10 to 12 seers per rupee.

Howrah.—Rainfall nil. Weather seasonable. Harvesting of jute and sowing of *rabi* going on. Rain badly wanted for *aman* rice. Supply of fodder and water sufficient. Common rice selling at 10 to 12½ seers per rupee.

24-Parganas.—Rainfall nil. Hot in the day and cool in the night. Prospect of *aman* fair. Rain is much wanted shortly. Ploughing for *rabi* crops going on in Barasat and Basirhat subdivisions. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs. c.	
Sadar	10 to 13 8	per rupee.
Barasat	9 0	
Basirhat	10 10	
Diamond Harbour	11 6	

Nadia.—No rain. Days hot; nights cool. *Aman* suffering much for want of rain. Prospects of *rabi* crops gloomy owing to drought. Fodder sufficient. Price of rice varies from 10 to 11 seers per rupee.

Murshidabad.—Rainfall nil. Weather seasonable. Sowing of indigo and *rabi* crops going on. *Kalai* plants thriving. Harvesting of *aus* continues. State of *aman* and sugarcane seems good. Rain wanted for all standing crops. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	11	per rupee.
Kandi	13	
Jangipur	11½	

Jessore.—Rainfall at Jhenida ·60. Weather seasonable. Prospects of *aman* gloomy. Rain badly wanted. Lands being prepared for *rabi* crops. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	9½ to 11	per rupee.
Jhenida	11 to 12	
Magura	9 to 9¾	
Narail	10	
Bangaon	11 to 12	

Khulna.—No rain. Weather fine and cool. Agricultural loans will be given in Mollahat thana. *Aman* paddy withering for want of rain. No cattle-disease. Fodder and water sufficient. Prices of common rice:—

	Srs.
Khulna	9 to 10
Bagerhat	8½ per rupee.
Satkhira	9½

Rajshahi.—Rainfall nil. Days hot; nights cool. Prospects fair. Rain urgently wanted for rice crop and *rabi* sowings. Winter rice withering in places. No attle-disease. Fodder and water available. Common rice selling from 9 to 10 seers per rupee.

Dinajpur.—Rainfall ·07 at Thakurgaon only. Weather hot during day; cool at night. Transplantation of *haimanti* is over. Standing crops on low lands doing well, but on high lands suffering for want of rain. Cultivation for *rabi* crops commences. Common rice selling from 10 to 11 seers per rupee. No cattle-disease. Fodder and water sufficient.

Jalpaiguri.—Rainfall nil. Days warm; nights cool. Steeping of jute continues. Rain badly wanted for standing crops. Preparaton of land for tobacco going on. Condition of cattle generally good. Fodder and water sufficient. Common rice selling at Sadar 10 and at Alipur subdivis on 7½ seers per rupee.

Rangpur.—Average rainfall ·19. Washing of jute nearly finished. Lands are being prepared for tobacco plantation. Prospects fair. Common rice selling at 9 to 11 seers per rupee. Fodder and water sufficient.

Bogra.—No rain. Weather clear. Jute washing going on. Winter rice doing well. Cattle-disease in three villages. Fodder and water ample. Price of common rice at head-quarters 9 seers and in the interior from 7½ to 11¼ seers per rupee.

Pabna.—Rainfall ·91 at Pabna. Weather getting cooler. Prospects of *aman* crop very poor. *Aus* rice selling at 10 seers per rupee at Pabna and common rice 8 seers per rupee at Sirajganj. Fodder sufficient.

Dacca.—Rainfall nil. Weather seasonable. Prospects of *aman* fair. Fodder available. No cattle-disease. Price of common rice 8 to 10 seers per rupee.

Mymensingh.—Rainfall nil. Weather seasonable. Rain wanted for the growth of *aman* crop. Fodder available. No cattle-disease. Common rice sells at 7½ to 8 seers per rupee.

Faridpur.—No rain. Weather seasonable. Rain necessary for *aman* paddy. Rice selling at 8 or 9 seers per rupee. Fodder available.

Backergunge.—Rainfall nil. Weather seasonable. Prospects of standing *aman* crop moderate. More rain wanted. No cattle-disease. Price of common rice varies from 7 to 10 seers per rupee.

Tippera.—Rainfall nil all over the district. Weather hot in the day and cool in the night. *Aman* paddy withering in high lands. Rain badl wanted. Outlook anxious. Cattle-disease reported from Chandpur. Fodder and water sufficient. Common rice selling from 8 to 11 seers per rupee.

Noakhali.—Rainfall (·74) only local. Prospects of crops gloomy for want of sufficient rain. Water and fodder good. Price of rice ranges from 9 to 13 seers per rupee.

Chittagong.—Rainfall 87 Weather hot. Prospects of standing crops generally fair. More rain would be beneficial. Water and fodder sufficient. Rice sells at 11 seers per rupee.

Patna.—Rain urgently wanted for rice crop and *rabi* sowings. Prospects of neither favourable except where artificial means of irrigation are available. Fodder and water for cattle sufficient. Prices rising. Common rice selling at—

	Srs.
Patna	10½
Barh	8½
Bihar	9½ per rupee.
Dinapore	9 to 11

Gaya.—No rain. Paddy crop suffering for want of rain. Common rice sells at 9 seers against average of 14 seers per rupee.

Shahabad.—No rain. Paddy crops on unirrigated tracts nearly dried up for want of rain. *Rabi* sowings retarded for want of moisture.

Saran.—No rain. Paddy drying up for want of rain. Fields are being prepared for *rabi* sowings, but for want of moisture sowings have not yet been undertaken as usual. Prices of food-grains are—Rice 8 to 10 seers per rupee, wheat 8 seers per rupee, maize 13 seers per rupee, gram 11 seers per rupee, and marua 16 seers per rupee.

Muzaffarpur.—Rainfall nil. Prospects of winter rice crop very bad except in the few places where irrigation is possible. *Rabi* sowings commenced in places, but for want of moisture prospects are very poor. Common rice and wheat sell at 9 seers per rupee each.

Darbhanga.—Rain badly wanted for rice crop. Paddy wherever not irrigated withering in Sadar and Madhubani and *rabi* sowings retarded for want of moisture in places. Prices rising. Common rice selling at Sadar 9 seers per rupee.

Monghyr.—Rainfall nil. Weather seasonable. Rain urgently wanted for paddy and *rabi* crops. Sowing of *rabi* commenced. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Monghyr	9 to 10	per rupee.
Begusarai	9½	
Jamui	12	

Bhagalpur.—Weather seasonable. Rain urgently wanted for *aghani* paddy which is withering for want of water. Sowing of *rabi* crops is being retarded.

Purnea.—No rain. Harvesting of *bhadoi* pally and jute finished. *Aghani* paddy promising though more rain wanted. *Rabi* sowings begun. Cattle-pox reported from two or three villages. Fodder and water sufficient. Common rice sells at 10 to 11 seers per rupee.

Malda.—No rain. Weather fine and getting cool. Prospects of winter rice very bad owing to want of rain. Rain is also urgently needed for sowing of *rabi* crops. Common rice selling at 11 seers per rupee. No want of fodder and water.

Sonthal Parganas.—No rain. Weather clear with variable winds. The want of rain is causing considerable loss of the rice crop all round the district and keeping back the sowing of the *rabi* crops. Rice sells at about 10 seers per rupee. No want of water or fodder as yet.

Cuttack.—Rainfall nil. Weather hot during day; getting cooler at night. *Laghu* rice suffering for want of rain. *Beali* rice is being harvested. *Rabi* being sown. Rain very badly wanted. Insect-pest disappearing. Condition of cattle good. Fodder sufficient. Common rice sells as follows:—

	Srs.	c.	
Cuttack	15	2	per rupee.
Jajpur	17	1	
Kendrapara	18	6	
Banki	20	0	

Balasore.—No rain. Weather seasonable. *Laghu* rice-ripening. *Laghu* and *sarad* crops are being injured by insects. *Sarad* is also suffering for want of rain. Condition of cattle good. Fodder sufficient. Common rice sells as follows:—

	Srs.	
Sadar	13	per rupee.
Bhadrak	16 to 18	

Puri.—Rainfall nil. Weather hot in the day; cool in mornings and evenings. Rain urgently wanted. Paddy plants beginning to wither on high lands. Insects are damaging *laghu* paddy which is being harvested. *Sarad* paddy coming into ear. Lands being prepared for *rabi* crops. Miscellaneous crops doing well. Fodder and water sufficient. Condition of cattle generally good. Common rice selling as follows:—

	Srs.	
Sadar	14 to 17	per rupee.
Khurda	15 to 18	

Angul.—No rain. Hot days; cold nights. *Beali* out. *Laghu* ripening Outturn of these two not over eight annas. *Sarad* much in need of rain, and where not irrigated will fail. Early *biri* and *kasi* will yield eight annas. Late *biri* and *kasi* will be a failure if no rain falls soon. No cattle-disease. Coarse rice obtainable with difficulty at 14 Cuttack seers per rupee.

Hazaribagh.—Weather hot in day, cold at night. No signs of rain. Prospects of paddy crop reduced to eight annas. *Rabi* fields being ploughed. Rice sells at 7 to 10 seers per rupee. Rice being brought from Raniganj.

Lohardaga.—No rain. Weather hot. Harvesting of *gora dhan* continues. Standing crops badly require rain. No cattle-disease. Fodder and water sufficient. Price of common rice—new 10 seers—old 7 seers per rupee.

Palamau.—No rain since 20th September. Most reservoirs empty. Present prospects of winter rice seven annas. Rain urgently needed for rice and for *rabi* sowings. Condition of cattle good. Water and fodder sufficient. Common rice sells at Sadar 6 seers 12 chitaks per rupee.

Manbhum.—No rain. Weather seasonable. Rain badly wanted. Fodder and water plentiful. Condition of cattle good. Common rice sells at Sadar 10 seers per rupee with tendency to rise.

Singhbhum.—Rainfall nil. Weather fine. Prospects of standing *aman* crop, except on well-irrigated land, are very bad for want of rain. Rice sells at 14 seers per rupee average. Fodder and water sufficient. No cattle-disease reported.

General Summary.—There was no rain during the week with the exception of showers at Rangpur, Pabna, Noakhali, Chittagong and Jhenida in Jessore. Rain is urgently needed all over the province. The winter rice crop has already suffered severely in all but a few districts for want of rain, and the *rabi* sowings are in many places being retarded for the same cause. In Cuttack the insects which had been infesting the rice crop are disappearing; but they are still doing damage in Balasore and Puri. The harvesting of early rice and the washing of jute are still proceeding in some districts. No cattle-disease is reported except from a few places in Midnapore, Bogra, Tippera, and Purnea. The price of common rice is unusually high and is said in several districts to be rising owing to heavy exports.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 20th October, 1896.

M FINUCANE,
Offg. Secy. to the Govt. of Bengal.

The total fall from 1st January to 17th October 1896	53·17
The average fall of the corresponding period for 24 years, Surveyor-General's Office	62·10

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the New Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

Δ dew.

DISTRICT ROAD FUND.

No. 5240R.C.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

ROAD CESS.

Dated Calcutta, the 10th October 1896.

RESOLUTION.

READ—

Letter from the Accountant-General, Bengal, No. 667L.F., dated 1st October 1896, submitting an abstract of receipts and expenditure of the several District Road Committees in Bengal for the quarter ending 30th June 1896.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees in Bengal, for the first quarter of the year 1896-97, be published in the *Calcutta Gazette* and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette*.

Ordered also that a copy of this Resolution, and of the abstract referred to, be forwarded for information to the—

Commissioners of the Rajshahi, Chittagong, Bhagalpur and Chota Nagpur Divisions;
Superintending Engineer of the Northern Circle;
Inspectors of Works, Eastern and Western Circles;
Financial Department of this Government.

By order of the Lieutenant-Governor of Bengal

J. G. H. GLASS,
Secretary to the Govt. of Bengal.

T. H. S. BIDDULPH,

Accountant-General, Bengal.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE COMMISSIONERS OF THE PORT OF CALCUTTA FOR THE YEAR 1895-96.

No. 1734Marine.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

Dated Calcutta, the 23rd October 1896.

RESOLUTION.

READ—

The Administration Report of the Commissioners of the Port of Calcutta for the year 1895-96:—

During the year under report, the Commissioners raised two debenture loans bearing interest at 4 per cent., one of 1½ lakhs to provide funds for enlarging the shed accommodation at the Petroleum Depôt, and the other of 16 lakhs for making improvements at the Petroleum Wharf at Budge-Budge, for providing additional rolling stock and remodelling the jetties, and for carrying out certain other works. These loans raised the total originally borrowed, including the consolidated loan from the Government of Rs. 60,25,100, but exclusive of that incurred on account of the construction of the Kidderpore Docks (Rs. 2,87,70,566), to Rs. 1,55,40,100, the total sum outstanding on these loans on the 31st March 1896 amounting to Rs. 1,14,31,882. The total investments at credit of the sinking funds have been increased from Rs. 13,04,000 at the beginning to Rs. 14,43,700 at the close of the year.

2. Against the debt consisting of the unpaid portion of the consolidated loan from the Government, together with the book debt on account of the port block transferred by the Government to the Commissioners in 1871, the Dock loan and five debenture loans, amounting in all to Rs. 4,16,46,148, the Commissioners hold block to the value of Rs. 5,06,12,058, and reserve funds amounting to Rs. 24,68,325, in addition to the valuable Strand Bank lands extending from Chandpal Ghat to Ahiritollah, for which an annual rent of Rs. 37,292, is payable to the Government.

3. The year opened with a revenue balance of Rs. 6,95,626; and the income for 1895-96, amounted to Rs. 49,31,805. The expenditure, including sinking funds, renewals and improvements, amounted to Rs. 47,91,061, leaving a balance of Rs. 8,36,370. The income of the year exceeded the budget estimate by Rs. 4,76,330.

4. The income under the head "Jetties" amounted to Rs. 17,23,432, showing an increase of Rs. 4,17,997 as compared with that of last year. The expenditure amounted to Rs. 10,15,680, being Rs. 1,77,675, in excess of that of last year. There was a net balance of Rs. 7,07,752, the largest on record since the formation of the Trust.

5. The income derived from the Petroleum Wharf at Budge-Budge shows an increase of Rs. 1,90,665, the total receipts for the year having amounted to Rs. 3,89,192. The quantity of kerosine-oil imported was 39,237,164 gallons against an import of 25,120,773 gallons during the previous year.

6. The importation of oil from Russia, which was 40 per cent. of the total importations during the year 1894-95, rose during the year under review to 60½ per cent. of the total importations.

7. By the erection of new sheds at Budge-Budge the accommodation has been increased to a capacity of 29,00,000 cases. The largest number of cases in the sheds at one time has been 24,08,448.

8. The total number of packages of tea, which passed through the Tea Warehouse, amounted to 717,510 chests, against 664,587 in 1894-95. The receipts amounted to Rs. 1,00,161, or Rs. 1,039 less than those of the previous year.

9. During the year 226 vessels with an aggregate tonnage of 561,401 were berthed at the Jetties, against 216 with a tonnage of 510,991 during 1894-95. The average number of days each vessel occupied the Jetties was 10·5.

10. The income of the Harbour Master's Department amounted to Rs. 5,45,349, against Rs. 5,30,303 in 1894-95. The increase was mainly due to increased receipts on account of mooring hire. The expenditure amounted to Rs. 5,60,911.

11. During the year there were 10 casualties to vessels, against 25 in the previous year. This gives a percentage of ·97, calculated on the number of vessels which arrived in the port.

12. In accordance with the orders of the Government, the Deputy Conservator held a preliminary enquiry in the case of every casualty that occurred during the year. The results of the enquiries were reported to the Government, but in no case was a formal investigation under the provisions of the Indian Merchant Shipping Act, 1883, considered necessary. One of the accidents, however, was considered to be a serious one, and the Assistant Harbour Master, who was in charge of the vessel, has been dismissed from the service of the Commissioners.

13. The work of examining boats while plying, was regularly attended to throughout the year by the Surveyors. During the year 176 cargo and 88 passenger boats were called in for re-survey. Of these 120 cargo and 67 passenger boats had become unfit for service through wear and tear, and 56 of the former and 21 of the latter had become so by meeting with accidents.

14. The total receipts under the head "Port Approaches" amounted to Rs. 4,17,543, towards which the port-dues, re-imposed from the 1st of December 1892, contributed Rs. 4,08,734. The expenditure amounted to Rs. 4,65,692.

15. An attempt was made during the year to survey the Sandheads, and the work was partially completed, but the fine weather is of such short duration that it is hardly possible in one season to make a satisfactory and complete examination of such an extended area, in addition to the necessary surveys of the river. The Deputy Conservator, however, hopes to finish the task next season.

16. The principal changes which occurred in the river were at the Dredge Bar, the bar at the northern entrance of the Balari Channel, the Rangafulla channel, and the James and Mary shoal. The other channels remained fairly steady during the year.

17. The question of doing something to improve the bars of the river was the subject of considerable discussion during the year, and a deputation from the Liner's Conference urged the Commissioners to undertake the work of dredging them. The Commissioners, however, wisely declined to embark on an undertaking which would have not only been enormously costly, but in all probability utterly futile. They decided instead with the concurrence of the Bengal Chamber of Commerce, to procure the best expert advice obtainable on the question of the feasibility of improving the Hooghly and the services of Mr. Vernon-Harcourt were secured. Mr. Vernon-Harcourt spent a month in Calcutta making investigations, and left for England in February last, taking with him all the materials for his report, which, however, has not yet been received.

18. The receipts from Special Tolls, levied under section 108 of the Calcutta Port Act, 1890, amounted to Rs. 8,56,610, against Rs. 8,13,398 in the previous year.

19. The receipts of the Kidderpore Docks amounted to Rs. 3,75,104, as shown below:—

	Rs.
Receipts from graving dock	1,05,954
Ditto imports	68,625
Ditto exports	1,60,870
Rent and miscellaneous	37,476
Receipts from towing vessels by hopper barges	2,179
Total ...	3,75,104

Against this the expenditure has amounted to Rs. 17,28,837, details of which are given below:—

	Rs.
Traffic establishment	79,989
Working expenses.	3,10,062
Repairs	46,883
Municipal taxes	1,44,080
Interest on capital	11,50,823
Total ...	17,28,837

The deficit thus amounted to Rs. 13,53,733. As in last year, the charges on account of "Traffic Establishment" and "Working Expenses" alone exceeded the income, the excess amounting this year to Rs. 10,947. As the result, however, of an exhaustive enquiry into the best means of utilising the facilities of the Port, the Commissioners have submitted a scheme under which the Docks will be more largely used than formerly, and the state of their finances may therefore be expected to improve.

20. The thanks of the Government are due to the Commissioners for their efficient management of the affairs of the Trust.

By order of the Lieutenant-Governor of Bengal,

A. D. McARTHUR, *Colonel*, R.E.,

Secy. to the Govt. of Bengal.

WEATHER AND CROP REPORT.

For the week ending the 26th October, 1896.

Burdwan.—Rain nil over the district. Weather fair and hot. Rain is badly wanted in all the thanas. It is urgently wanted for the sowing of *rabi* crops. *Aman* crop is withering for want of rain throughout the district. Condition of cattle good. Fodder and water sufficient. Common rice selling as follows:—

	Srs.	
Sadar	11 to 14	per rupee.
Kalna	12	
Katwa	11 to 13½	
Raniganj	8½	

Birbhum.—Weather fine. No rain. Foggy this morning. Harvesting of *aus* going on. Rain is greatly needed for the standing crops. Rice selling at 11 seers per rupee.

Bankura.—No rainfall. Weather hot during day; cool at night. Rain badly wanted. Standing crops suffering. Outturn of *aman* will not exceed 8 annas if there is not early rain Sowing of *rabi* going on in places, but it is retarded for want of moisture. Supply of fodder and water sufficient at present. Common rice selling at 10 seers the rupee both at Bankura and Vishnupur.

Midnapore.—No rain during the week. Weather seasonable. Rain is badly wanted everywhere. Paddy plants on high lands withering for want of moisture. *Aus* is still being reaped in some places. Sugarcane, indigo and *til* doing badly for want of rain. *Rabi* is being sown in some places. Cattle-disease reported from Naraingur, Binpur and Garbetta. Common rice selling as follows:—

	Srs.	
Sadar	10	per rupee.
Contai	12 to 16	
Tamluk	10¾	
Ghatal	10 to 13	

Exports have much decreased owing to the rise in prices.

Hooghly.—No rain throughout the district. *Aman* beginning to wither in places. *Rabi* cultivation going on. Rain required urgently. Common rice sells from 10 to 12 seers per rupee.

Howrah.—Rainfall nil. Weather seasonable. Harvesting of jute and sowing of *rabi* almost over. Rain badly wanted for *aman* rice. Fodder and water sufficient. Common rice sells from 10 to 13 seers per rupee.

24-Parganas.—No rain. Weather cool in the morning and night; hot in the day. Prospects of paddy not favourable for want of rain. Washing of jute is still in progress. Ploughing and sowing of *rabi* crops going on slowly. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	c.	
Sadar	10 to 13	8	per rupee.
Barasat	9	8	
Basirhat	10	10	
Diamond Harbour	10	10	

Nadia.—No rain. Days hot; nights cool. *Aman* suffering for want of rain. Prospects of *rabi* crops gloomy owing to drought. Fodder sufficient. Rice selling at 10 to 11 seers per rupee.

Murshidabad.—Rainfall nil. Weather seasonable. Prospects of *kalai* and *rabi* crops not good. *Aman* suffering for want of rain. Rain much wanted for all standing crops. State of sugarcane and indigo seems good. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	c.	
Sadar	9		per rupee.
Kandi	10	2	
Jangipur	9	8	

The sudden rise in prices of rice is due to sudden exports to other districts.

Khulna.—Rainfall nil. Weather dry and cooler. *Aman* paddy in some parts withering for want of rain; in other parts there will be a good crop. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Khulna	9½	per rupee.
Bagerhat	8	
Satkhira	9½	

Rajshahi.—No rain. Days hot; nights cool. Prospects of winter crops fair, except at Sadar. Rain badly wanted for winter rice. Sowing of *rabi* crops retarded in many places for want of rain. No cattle-disease. Fodder and water sufficient. Rice sells from 8 to 12 seers per rupee.

Dinajpur.—Rainfall nil. Weather seasonable. Standing crops on low lands doing well but on high lands suffering for want of rain. The preparation of lands for *rabi* crops is going on. Common rice selling from 8 to 10 seers a rupee. No cattle-disease. Fodder and water sufficient.

Jalpaiguri.—Rainfall (·17) did much good. Weather seasonable. Steeping of jute going on. More rain wanted for *haimanti* paddy. Lands are being prepared for tobacco and potato. Fodder and water sufficient. Average price of common rice 9 seers per rupee.

Darjeeling.—Rainfall at Sadar ·17, Siliguri ·47, Kurseong ·33, Kalimpong ·14. Weather seasonable. In the Hills:—*Aghani dhan* progressing; wheat and barley being sown; *kalai, barra marua* and *bhutmas* flowering; *phaphur* coming up. In the Terai:—Prospects of *haimanti dhan* not good; *kalai* being planted. Coarse rice selling as follows:—

	Srs. c.	Srs. c.	
Hills	6 7	to 8 0	per rupee.
Terai	7 8	to 8 0	

Rangpur.—Rainfall nil. Washing of jute still continues. Land under preparation for cold-weather crops. Mustard and tobacco are being sown in places. Prospects of *aman* fair, but rain is wanted. Fodder and water sufficient. Common rice selling at 8 to 12 seers per rupee.

Bogra.—No rain. Weather clear. Foggy and cloudy now and then. Jute washing going on. Winter rice doing well on low lands. It is suffering from drought on high lands. No cattle-disease. Fodder and water ample. Common rice sells at head-quarters 9 seers, and in the interior from 7½ to 10½ seers per rupee.

Pabna.—Rainfall nil. Weather getting cool and pleasant. Sowing of *rabi* crops delayed for want of rain. Prospects unfavourable. Fodder available. Rice selling at Sirajganj 8 seers, Pabna 9 seers, and in the interior from 8 to 10 seers per rupee.

Dacca.—Rainfall nil. Weather hot. Prospects of *aman* not very good. Rain much needed. Harvesting of jute nearly completed. Fodder available. No cattle-disease. Common rice sells from 8 to 10 seers per rupee.

Mymensingh.—Rainfall nil. Rain is greatly wanted for the *aman* crop. Sowing of *rabi* crop has commenced in places. Common rice sells at 8 seers per rupee.

Faridpur.—No rain. Weather seasonable. All crops stand in need of rain. Condition of cattle good, and fodder available. Common rice selling at 9 seers per rupee.

Backergunge.—Rainfall nil. Weather seasonable. Prospects of standing crops moderate, but are suffering for want of rain. No cattle-disease. Price of common rice varies from 7 to 10 seers per rupee (*aman*) and from 9 to 12 seers per rupee (*dus*).

Tippera.—No rainfall for a long time. Cry of rain all over the district. Weather hot and a little cool at night. *Aman* paddy withering on high lands. Fodder and water sufficient. No cattle-disease reported. Common rice selling from 8 to 9 seers per rupee.

Noakhali.—Rainfall nil all over the district. Weather seasonable. Prospects of crops bad. Rain badly wanted. No cattle-disease. Fodder and water good. Common rice sells at 9 to 13 seers per rupee.

Chittagong.—Rainfall nil. Days hot; nights and mornings cool. Rain would improve prospects of standing crops. Fodder and water sufficient. Rice selling at 11 seers per rupee.

Patna.—Rain urgently wanted both for rice and *rabi* crops which promise well in areas irrigated by canal and from water reservoirs. Prices slowly rising but no distress. Relief operations are being considered. Common rice at Patna selling at 9½ seers per rupee. Fodder and water for cattle sufficient, except in Bihar where green fodder is becoming scarce.

Gaya.—Prospects moderate for *kharif* and good for *rabi* crop. Common rice selling at Sadar 8 to 9 seers per rupee.

Shahabad.—Weather warm. East wind prevailing. Paddy crops on un-irrigated lands dried up. *Rabi* sowings going on but not progressing favourably for want of moisture. Prospects gloomy.

Champaran.—No rain. Winter rice practically gone except on low lands or where irrigated. Much, however, preserved by irrigation in north. *Bhadoi* harvest nearly over; average yield eight annas. *Rabi* sowings delayed, but good rain by 20th November will suffice for them. Common rice sells at 11 seers per rupee against average of 17 seers. Prices slightly risen. Fodder and water sufficient.

Muzáffarpur.—No rain. Mornings cloudy since three days. Prospects of rice crop very bad. *Rabi* sowings in progress but seeds not germinating well. Prospects of tobacco also poor. Prices rising steadily. Common rice selling 8½ seers, wheat 8½ seers, makai 13 seers, barley 13 seers, gram 10½ seers, arhar 12 seers, marua 15 seers.

Darbhanga.—Prospects of paddy very gloomy. Rain urgently wanted for *rabi*. Coarse rice selling at sadar 10 seers per rupee.

Monghyr.—Rainfall nil. Days hot; nights cool. Prospects not good. *Aghani* paddy suffering Rain badly wanted for *rabi* sowings in progress. No cattle-disease. Ample fodder and water. Common rice sells as follows:—

	Srs.	
Monghyr	8 to 9	per rupee.
Begusarai	8¾	
Jamui	8 to 9	

Bhagalpur.—No prospect of rain which is much needed. Rain urgently required for *rabi* sowings. *Aghani* rice has suffered badly from want of rain. No want of fodder and water. Some cattle-disease in Sadar subdivision. Owing to great exports, prices of food-grains are very high. Common rice sells as follows:—

	Srs.	c.	
Sadar	9	6	per rupee.
Banka	8	12	
Madhipura	11	0	
Supaul	12	0	

Purnea.—No rain. Prospect of *aghani* paddy fair. The plants into ear, but on high lands they are suffering from want of rain. *Rabi* sowing begun. Cattle-disease reported from Araria. Fodder and water sufficient. Price of common rice 11 seers at Sadar and Araria and 9 seers at Kishenganj.

Malda.—No rain. Weather seasonable. Rain very urgently needed for winter rice on high land and indeed for all crops, *kalai*, &c., which are withering for want of moisture. Sowing of *rabi* crops is progressing. Coarse rice is selling at 11 seers per rupee. Fodder and water sufficient for cattle.

Sonthal Parganas.—No rain. Weather still warm and cloudy this morning. Rain badly wanted specially on west side for winter rice and *rabi* sowings. Prices rising. Common rice 9 to 10 seers per rupee.

Cuttack.—Rainfall nil. Days hot; nights cool. Rain badly wanted. Both *laghu* and *guru sarad* and *rabi* crops are withering for want of moisture. Insects are still damaging the crops in some parts of the district. If no rain falls in ten days serious failure of harvest is anticipated. Retail shop prices of common rice have gone above the normal rate:—

	Srs.	c.	
Cuttack	12	8	per rupee.
Jajpur	14	7	
Kendrapara ...	12	0	

Balasore.—Days hot; nights cool. Rain badly wanted. Crops suffering in all parts of the district. Winter rice in ears being destroyed by insects in some parts. *Rabi* sowings going on, but retarded for want of rain. Fields being irrigated where convenient. Loss of crop apprehended. Common rice selling at 12 and 14 seers per rupee at Sadar and Bhadrak respectively. Cattle are in good condition. Fodder and water sufficient.

Puri.—No rain except a little in Gop thana. Paddy withering on high lands. Insect pest disappearing. Want of rain injuring *rabi* sowings. Fodder and water sufficient. Condition of cattle good. Common rice selling at Sadar 12 to 17 seers and Khurda 13 to 17 seers per rupee.

Angul.—No rain. Weather hot and dry. *Laghu* being harvested. *Sarad* being irrigated where possible. Paddy prospects much the same as reported last week. *Rabi* prospects poor. No rice being sold in local markets. The District Officer has to indent on sarbarakars for police supplies.

Hazaribagh.—Weather hot and dry. No sign of rain. Prospects of paddy crop four to eight annas. Rice sells at 6 to 8 seers per rupee.

Lohardaga.—Harvesting of *gora dhan* continues. Rain badly needed for standing crops. The rice crop promises to be a bare eight-anna one. Price of common rice 9 to 10 seers (new) and 6 to 7 (old) per rupee. No cattle-disease reported. Fodder and water sufficient.

Palamau.—No rain during the week. Crops suffering for want of rain. Rain urgently needed for *rabi* sowing. No cattle-disease. Water and fodder sufficient. Coarse rice sells at about 7 seers per rupee.

Manbhum.—No rain. Weather seasonable. Prospects of winter rice poor owing to want of rain. Outturn estimated now at five to eight annas. Cattle-pox in thana Raghunathpur. Fodder and water available. Common rice sells at Sadar 12 seers (new) and 10 seers (old) and Gobindpur 10 seers per rupee.

Singhbhum.—*Gora dhan* yielded 17 annas. Winter rice may yield 8 to 10 annas. Common rice sells at Baharagora and Kalkapur 12 seers, and at Chaibassa 10 to 12 seers per rupee. Competition of exporters caused the rise in price.

General Summary.—No rain fell during the week, with the exception of a few showers in the extreme north of the Province. Rain is in all districts urgently needed for the winter rice; this crop is said to be doing well in irrigated lands in the Patna Division, and in low lands in Northern Bengal. In other parts of the Province the rice on high lands is withering. The *rabi* sowings are being generally delayed on account of the drought, but a commencement has been made in some districts. In parts of Cuttack and Balasore the insects are still injuring the rice crop. Cattle-disease continues to be reported from places in Midnapore, Bhagalpur, and Purnea, and from one thana in Manbhum. The price of common rice is abnormally high and is steadily rising in several districts owing to exports.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 27th October, 1896.

M. FINUCANE,
Offg. Secy. to the Govt. of Bengal.

The average pressure of the corresponding period for 24 years, Surveyor-General's Office		29·865
	Hours.	
The total number of hours of bright sunshine		68·6
The maximum possible number of hours of sunshine		80·4
	°	
The mean temperature of the seven days		79·2
The average temperature of the corresponding period for 24 years, Surveyor-General's Office		80·8
The extreme variation of temperature		20·8
The maximum temperature		90·2
	Miles.	
The highest velocity of the wind in one hour		10
	%	
The mean relative humidity		77
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office		77
	Inches.	
The total fall of rain from 18th to 24th October 1896		Nil.
The average fall of the corresponding period for 24 years, Surveyor-General's Office		1·18
The total fall from 1st January to 24th October 1896		53·17
The average fall of the corresponding period for 24 years, Surveyor-General's Office		63·28

The mean pressure, temperature, &c., are deduced from the traces of the Barógraph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed, open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official Tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

⌓ dew.

RESOLUTION ON THE ANNUAL GENERAL ADMINISTRATION REPORT OF THE CHOTA NAGPUR DIVISION FOR THE YEAR 1895-96.

GENERAL DEPARTMENT—MISCELLANEOUS.

Darjeeling, the 28th October 1896.

RESOLUTION—No. 557T.—G.

READ—

The Annual General Administration Report of the Chota Nagpur Division for 1895-96.

The Report is submitted by Mr. C. R. Marindin, who took over charge of the Division at the close of the year 1895-96. Mr. W. H. Grimley held charge during the whole of the year, except the last five days. Colonel A. Evans-Gordon and Messrs. H. C. Streatfeild and L. F. Morshead held charge of the districts of Lohardaga, Palamau, and Manbhum practically throughout the year, and Colonel C. H. Garbett and Mr. C. H. Bompas had charge of Hazaribagh and Singhbhum, each for nine months, so that the continuity of administration was fairly maintained. But the present Commissioner and three of the District Officers labour under the disadvantage of having joined their charges at the close of the year on which they had to report.

2. *Tours and Inspections.*—The Commissioner and the Deputy Commissioners of Hazaribagh and Lohardaga were able to spend only 88 days, 90 days, and 113 days, respectively, in camp, the prescribed period being 4 months. Three months was the standard for the tours of the other District Officers in the Division and for the Subdivisional Officers, and their tours all reached or passed the standard, except that of Mr. W. Rattray, Subdivisional Officer of Giridih, which fell short by 25 days. Mr. Streatfeild was on tour in Palamau for 126 days. The prescribed inspections of district and subdivisional offices and treasuries were made, except that the Commissioner did not inspect the offices at Ranchi, and Mr. Herald was prevented by an accident from going to Giridih in March and inspecting the offices there for the second half-year; the district offices of Lohardaga and Palamau were inspected only once by the Deputy Commissioner. The tours of the Commissioner, of which an interesting account is given in paragraph 4 of the Report, and those of the District and Subdivisional Officers, appear to have been well planned and useful.

3. *Weather and Crops; Public Health; Material Condition of the People.*—The average rainfall of the Division was 44·69 inches, 16·75 inches less than in the preceding year, and was especially deficient in Hazaribagh, Palamau, and Manbhum. The crops were consequently poor; the outturn of rice throughout the Division being estimated at 11 annas, whereas in each of the two previous years rice yielded a full crop. The average outturn of wheat, pulse, and oilseeds was also much lower than in the preceding year, and the *mahua* tree yielded only a 9-anna crop. Prices of food-grains ruled generally higher than in previous years. The condition of the labouring and cultivating classes shows, however, a tendency to improve, which is due principally to the growth of the coal and mica-mining industries and of the lac trade. The state of the zamindars and other landowners is less satisfactory. There is friction between them and their raiyats, who are withholding the customary services hitherto rendered, while their mode of living is becoming more expensive, and their expenditure on marriages and social ceremonies is increasing. Legislation is about to be introduced, which, it is hoped, will have the effect of putting the relations of landlords and raiyats in the Division on a more satisfactory footing.

The year 1895 was comparatively healthy, though not so healthy as 1893. The average death-rate in 1895 was 27·33 per mille; there was very little cholera except in Manbhum and in two thanas of Hazaribagh. In the latter district vigorous efforts to improve the registration of births and deaths have been made with some success.

4. *Emigration and Immigration.*—The number of emigrants for Assam, registered in the Division, rose from 11,984 to 15,350; of these, by far the larger proportion (10,611) were registered in Manbhum, to which district many coolies are brought from other parts for selection. Besides the registered emigrants, large numbers are recruited on the "free" labour system. Colonel Garbett, who knows Hazaribagh thoroughly, speaks in high terms of the benefits which emigration, in spite of its abuses, has brought to that district. The question of putting a stop, or at least a check, on abuses connected with emigration is receiving the careful consideration of the Lieutenant-Governor.

Labourers from Bihar and the North-West Provinces came in large numbers to work at the collieries in Manbhum, and it is said that persons from Keonjhar and other parts are settling down in Singhbhum.

5. *Manufactures; Mines; Trade and Commerce.*—Lac is the principal manufacture of the Division. There are 11 factories at work in Lohardaga and 42 in Manbhum, and they turned out 27,362 maunds of button and shell-lac, against 12,926 maunds in the previous year. In Palamau lac is largely collected for export, but not manufactured: last year's exports are estimated at 32,900 maunds. The outturn of tea was 1,236,452·5 lbs., against 298,842 lbs. in the previous year; but the season was not specially favourable, in that the young seedlings transplanted were severely injured by the uneven rainfall. The increased outturn is attributed to an improved system of pruning.

Coal-mining on a large scale is confined to the Giridih and Gobindpur subdivisions. There has been a large increase in the number of collieries in the latter area, owing to the settlement of the Jharia fields, but the industry there has latterly received a check from a fall in the price of coal. The total output of

coal was 1,914,843 tons in 1895 against 700,049 in 1894; that of the mines in the Gobindpur subdivision being 1,281,294 tons—nearly twenty times as much as in 1893. The mica-mining industry in Hazaribagh is gradually gaining in importance; the total output was 8,019 maunds, against 4,849 in the previous year. Gold-mining in Chota Nagpur has not yet achieved success. Coal and coke make up almost the whole of the exports by rail; of these, 3,52,44,628 maunds were exported, while the exports of all kinds of goods amounted only to 3,53,70,101 maunds. 52,392 maunds of food-grains were exported and 4,53,839 maunds imported, so that the net import of food-grains by rail was 4,01,447 maunds. No reliable figures are available to show the course of trade in Lohardaga, Palamau, and the greater part of Hazaribagh, which are not served by any railway.

6. *Civil Justice.*—Six thousand one hundred and forty-nine cases of all kinds were disposed of by Munsifs—155 more than in the previous year; the rent suits disposed of numbered 5,162, against 4,792 in the previous year. The number of witnesses examined in civil suits was 11,132, and in rent suits was 9,228, against 12,385 and 8,593 in the previous year. The percentages of witnesses detained for more than two days were 10·6 and 3·7 in civil and rent suits respectively.

7. *Crime; Police; Criminal Justice.*—Excluding sanitary offences (of which there were 1,789), 6,512 cognizable cases were reported in 1895, against 6,699 in 1894; 4,131 non-cognizable cases were reported, against 3,425 in the previous year. A small increase in cognizable crime is reported from Manbhum, where the number of rioting cases rose from 14 to 45, owing to disputes about the newly-settled coal-fields and about lac-bearing trees. In Lohardaga also there were three serious cases of this kind. One of them arose out of the appearance of the "prophet" Birsa Munda, of which Mr. Grimley has given an interesting account. In the same district a number of Nats were convicted of the offence of being members of a gang associated for the purposes of theft. Four hundred and fifty cases, or 7·7 of the whole number investigated, were declared false. In only 34 of these cases were the complainants prosecuted, and only 10 of these were convicted.

Six thousand four hundred and sixty-three cases were disposed of by Stipendiary Magistrates during the year, as against 6,383 in 1894; and 25,425 witnesses were examined by them as against 23,735 in 1894; and the percentage of witnesses detained over two days rose from 4·5 to 5·08. The Honorary Magistrates and Benches tried 1,956 cases, against 1,458 in the previous year, and the number of witnesses examined by them rose in a rather less proportion. The percentage of witnesses detained by them for more than two days rose, however, from 3·4 in 1894 to 12·2 in 1895. There can have been no adequate reason for so large an increase. On the other hand, it is satisfactory that four Benches and two Honorary Magistrates, sitting singly, were able to dispose of their cases without detaining any witnesses more than two days. The proportion of police cases remanded six times or more to the whole number tried by Stipendiary Magistrates rose from 4·2 to 9·5. This is far from creditable to the criminal administration of the Division, and the Lieutenant-Governor trusts that the Commissioner will make every effort to secure the more prompt disposal of criminal cases. There was some improvement in the work of Honorary Magistrates in this respect, but here also there is still much to be desired.

One hundred and nine cases were tried at the Sessions Court, and 74 ended in conviction. Committals appear to have been made after careful enquiry, except in Manbhum and Lohardaga, where the results of cases committed were poor.

Fines to the extent of Rs. 36,439 were imposed during the year. Out of the total demand of Rs. 58,469, only Rs. 31,175 were realized and Rs. 6,682 were remitted. The large balance of Rs. 20,612 is still outstanding, and measures should be taken to reduce it either by recovery or by writing off sums irrecoverable.

Certain changes were made during the year in the distribution of the police, to give effect to the recommendations of the Committee which sat for the purpose in 1892. The accounts of the working of the regular police given by the district officers attribute to that force mediocrity and nothing more. The

Division as a whole is described as a country comparatively free from crime, but the expansion of coal-mining appears to be introducing new difficulties into police administration.

The provisions of Act V (B.C.) of 1887 for the organization of the village police are gradually being extended to more villages, and are now in force in the greater part of Hazaribagh, Lohardaga, and Palamau. It is reported that, especially in the north of Manbhum, the highest salary (Rs. 4) allowed by the Act is insufficient to attract to the post of chaukidar men who can get higher wages as labourers on railways or in mines.

8. *Land and Land Revenue.*—The current demand of land revenue in the Division rose for various causes by Rs. 19,041 to Rs. 4,05,263. The arrear demand was Rs. 11,635; and of the total demand (current and arrear), Rs. 4,01,634 were collected. In permanently-settled estates the current collections exceeded the standard percentage (99 per cent.) of the current demand in every district. In Singhbhum and Manbhum the whole of the current demand was realized.

The following table shows the proportion of current collections to current demand in temporarily-settled estates:—

Hazaribagh	...	...	...	99·8
Lohardaga	...	...	...	97·3
Palamau	...	...	...	86·9
Singhbhum	...	...	...	33·2
Manbhum	...	...	...	100·0

The demands in the last two districts on this account are very small: in Singhbhum the current demand is only Rs. 770. The standard of 95 per cent. was not reached there or in Palamau. In estates held direct by Government the standard of 90 per cent. was everywhere attained. Hazaribagh realized 99·5 per cent. of the current demand, Singhbhum 97·04, and Lohardaga 90·6; in the other districts there are no estates of this class. On the whole, the collections of land revenue in this Division have been excellent.

The total demand of road and public works cesses was Rs. 3,93,663; 99·9 per cent. of the arrear demand was collected, and 77·6 per cent. of the current demand. The settlement of the Palamau Government estate has been completed, except for the publication of the jamabandis and the hearing of objections to assessments, and the similar operations in the Kolhan estate in Singhbhum have progressed satisfactorily during the year.

9. *Wards' and Attached Estates.*—There were eight wards' and 54 encumbered estates under the management of the revenue authorities during the year. The most important of these is the Pachete estate in Manbhum, charge of which was taken during the year under Act VI of 1876. This estate has large outstanding balances, and the attention of the Manager has been mainly devoted to ascertaining the claims against it. The total current demand of all the estates is Rs. 7,28,105; and the arrear demand was Rs. 4,49,429. In Singhbhum the arrear demand was more than twice as much as the current demand. The total outstanding balance at the end of the year had risen to Rs. 5,20,992—a result chiefly due to the inclusion of the demand for the Pachete estate. The Lieutenant-Governor trusts that every effort will be made to reduce these balances. The expenditure in these estates on donations to schools and dispensaries, buildings and improvement of the land and properties amounted to Rs. 23,271, being 3·19 per cent. of the current demand.

10. *Excise; Stamps; Income-tax.*—The total excise revenue has risen by Rs. 70,830 to Rs. 10,57,436. The main part of the increase is contributed by country-spirit, under which head the revenue increased by Rs. 51,228 to Rs. 8,75,003, in spite of the fact that the year was one of bad crops and of a bad outturn of *mahua*. A revenue of Rs. 15,828 is derived from *pachwai*—nearly half of it from the Singhbhum district, where the aboriginals prefer buying their *pachwai* to brewing it at home, though they are allowed this privilege. The income derived from stamps amounted to Rs. 4,42,412, and showed an increase of Rs. 5,169 only. The gross collections on account of income-tax amounted to Rs. 99,684. The net revenue increased by Rs. 5,642 to Rs. 91,884. The tax was assessed on 4,591 persons.

11. *Communications.*—Three short branch railway lines are under construction among the coal-mines in the Gobindpur subdivision. Three new roads are being made in Lohardaga, Palamau, and Manbhum, respectively; but the income of the District Road Committees has been spent chiefly upon the repair and improvement of existing roads, and considerable attention has been given to the maintenance of roadside avenues.

12. *Education.*—There are 2,923 schools in the Division—339 more than in 1894-95. The total expenditure is Rs. 3,57,018. 77,295 pupils are now at school—6,357 more than in the previous year; but the number of boys at school is still estimated at not more than 22·3 of the total number of boys of a school-going age. The number of primary schools increased from 2,400 to 2,732; so that education, though still very backward, may be said to have made satisfactory progress during the year.

13. *Dispensaries and Hospitals.*—There were 17 dispensaries at work during the year: five of these are supported by various Missions. 57,682 patients were treated in all at an expenditure of Rs. 20,101. The zamindars of Palamau have contributed most liberally to the cost of dispensary buildings in that district. There are leper asylums at Lohardaga and Purulia also maintained by Missionary Societies. A zenana hospital has been opened at Hazaribagh, and one has been built at Ranchi, but has not been opened for want of funds.

14. *Local Self-Government Institutions.*—There are nine municipalities in the Division. Only three of them—Ranchi, Purulia, and Hazaribagh—have incomes of more than Rs. 10,000. The aggregate amount spent by the municipalities in the Division on primary education exactly reaches the standard laid down by Sir Charles Elliott, namely, 3·2 per cent. of the total income. The Municipal Committee at Hazaribagh kept their town in excellent order, but that at Ranchi is unfavourably reported on in this respect. The other municipalities appear to have done useful work, as well as the District Road Committees.

15. *Employment of Muhammadans.*—Of the ministerial appointments, 9·5 per cent. were held by Muhammadans, and 34 per cent. of the menial appointments. The percentage of Muhammadans among the population is only 5·9.

16. *Social and Political Institutions.*—The Kayastha Sabha and the Congress Committee at Hazaribagh each held two meetings during the year. There appears to be some excitement among the Mundas in the Lohardaga district, which manifested itself during the year in the incidents connected with the appearance of Birsa Bhagwan.

17. *Conduct of Zamindars.*—The Hon'ble Mr. W. H. Grimley has been able to give an excellent account of the conduct of the zamindars of this Division, especially of the Maharaja of Chota Nagpur and his brother, and of the zamindars of Palamau; and the report concludes with an interesting summary of his administration of the Division during the last seven years.

18. The Lieutenant-Governor thanks Mr. Grimley for his careful and efficient administration of the Division, and Mr. Marindin for his Report, from which extracts are published for general information.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,

Offg. Secy. to the Govt. of Bengal.

Extracts from the Annual General Administration Report of the Chota Nagpur Division for the year 1895-96.

II.—TOURS AND INSPECTION OF OFFICES.

4. The Hon'ble Mr. Grimley has left the following account of his tour:—

* * * I returned to Ranchi on the 16th September, and did not go out again until the 25th October, when I joined Colonel Gordon, the Deputy Commissioner of Lohardaga, who was encamped at Khunti, on the Bandgaon Road, about 23 miles from Ranchi, under very peculiar circumstances. In the month of July and August a strange movement occurred in the southern part of the district. A prophet arose in the land in the person of an infatuated youth, named Birsa Munda, who gave out that the world was shortly coming to an end, that there would be a deluge, and the only safe place would be the plot of rising ground on which he had fixed his abode. Rupees would be turned into water, as well as the bullets of any hostile force sent against him. The people flocked to him in great numbers, taking with them their sick and dying, as they were induced to believe that he possessed healing powers of a supernatural order. They approached him as their *Sing bonga*, or Sun god, the good spirit who watches over them and can do no ill. Birsa's explanations of failure to effect cures, it must be admitted, showed much smartness. Those who returned without being healed had not approached him with the proper form of reverence, and when a corpse was brought he excused himself, saying it was not a dead body, but only a lump of earth. The only real miracle he did work was to reduce to silence a half-crazy, garrulous old woman, whose never-ceasing tongue was the plague of the village. That he should be able to effect this without resorting to decapitation was counted a marvel. In the course of these proceedings the police, who were watching Birsa's actions, were violently assaulted, and it became necessary to arrest Birsa and some of his followers who had resisted the police. The sudden arrest, which was very cleverly effected at night by the District Superintendent of Police, Mr. Meares, did not seem to disconcert Birsa, for he at once gave out that only a log of wood would be found in the jail, while he himself would appear again at his home in Chalkad in three days. This announcement caused the whole countryside to flock to Chalkad on the day appointed, but when Birsa failed to appear their faith waned, and the crowds dispersed. At this time "Have you been to Chalkad?" became an ordinary form of greeting when two persons met. Later on the Deputy Commissioner, Colonel Gordon, who was conducting the enquiry, decided to hold the trial in the interior of the district at Khunti, so as to give the people who had been deluded by Birsa's pretensions an opportunity of witnessing it and of learning the absurdity of Birsa's pretensions. At midnight of the 24th October I received an alarming message from Colonel Gordon to the effect that the people who had come in to see the trial were threatening violence, and that he had found it necessary to arrest many of them, to stop the trial, and send Birsa and his fellow-accused back to Ranchi. He asked for a police force to be despatched to him at once. I accordingly sent out about 25 men, and set out myself, passing the police on the road. On arrival I collected together the people who had come in, and after making them sit down in groups, village by village, with the help of the Revd. Father Hoffman, who acted as interpreter—for the men spoke Mundari—I examined each group, and learnt the full meaning of the incident which had alarmed the Deputy Commissioner. They had come in, it appears, to see the trial in response to a general intimation which had been circulated in the villages, and when they found they were not allowed to see Birsa, their *Dhartiaba*, Father of the World, as they called him, some of them became clamorous and began to jump about and gesticulate. As they seemed, however, to have had no serious intention of resisting the authorities, but to have been merely carried away by momentary excitement, I allowed them to disperse to their homes, and those of their number who had been arrested the night before were subsequently tried by a Deputy Magistrate, Babu Krishna Kali Mukerjee, who knows their language, and acquitted them chiefly on the ground that their expressions had not been properly understood

at the time of the excitement, and that they had no intention of creating a disturbance. After making this enquiry I returned to Ranchi on the 28th October.

V.—MATERIAL CONDITION OF THE PEOPLE.

21. Owing to the deficient rainfall, the outturn of the crops during the past year was not a favourable one, especially in the districts of Hazaribagh, Lohardaga, Palamau, and Manbhum, where the yield of the winter rice and other crops was much below the average of normal years.

22. In Hazaribagh Colonel Garbett, the Deputy Commissioner, reports that the bulk of the poorer classes depend to a great extent on the *mahua* and the *bhadoi* crops. The *mahua* crop was comparatively a poor one during the past year, and its outturn averaged only about eight annas. On the other hand, the *bhadoi* was a much better crop than that of the previous year, and the outturn averaged about 13 annas. The rice crop failed partially owing to deficient rainfall in September and October, and the outturn was estimated at ten annas. The *rabi* crops also partially failed on account of deficient rainfall. Sugarcane, *surso*, and *surguja* yielded fairly well. Lac yielded most abundantly in the jungle tracts of the district, and brought comparative wealth to many non-cultivators. In the neighbourhood of trade centres, such as Hazaribagh, Chattra, and Giridih, and of the large industrial centres of the coal mines and mica mines, where high wages are received, people are fairly well off, but, generally speaking, the condition of the people is poor, and the labouring classes and small cultivators had a more or less hand-to-mouth existence. The zamindars, too, are poor and in debt, and the trading and money-lending classes are the only sections of the people who can be said to be prosperous. On the basis of the agricultural results of the year, taken as a whole, the material condition of the people in this district was the same as last year.

23. In Lohardaga the Deputy Commissioner reports that the condition of the cultivating classes has steadily improved with the high price of agricultural produce that has prevailed during the past five years, and their prosperity has not been seriously affected by the short crops of the year under report. Rents as a rule are low, and Mr. Streatfeild thinks that the tendency of the Revenue Courts is to reduce the actual payments hitherto made to the landlords in cash, kind, and service. The condition of the land-holding classes in this district, he says, continues very unsatisfactory, in consequence of the strained relations with their tenants, and the latter having learnt how to resist illegal demands are now refusing those which are legitimate. The zamindars, on the other hand, are clinging to their old feudal rights, and thus increasing the discord between themselves and their raiyats find it more and more difficult and expensive to collect their rents; and owing to this and the increased expenses of their more modern mode of life are in an almost universal state of indebtedness. The condition of the labouring classes is said to have remained much the same as last year.

24. In Palamau the condition of the people is reported to have been on the whole good, in spite of the bad agricultural season. This was chiefly due to the enormous extension of the lac industry in the district, which has brought in a living to many of the poorer classes who would otherwise have suffered from bad crops. The lac crop at the commencement of the year was not a full one, but prices were then high; the cold-weather crop was a good one, though prices then ruled somewhat lower. Again, the crops of the preceding years were good, and this has served to neutralise to a certain extent the effects of the bad harvests of the past year.

25. In Manbhum Mr. Morshead, the Deputy Commissioner, reports that last year the rainfall in the district was very scanty, and consequently the outturn of the winter rice crop was much below the average, especially in the high level lands, which are held mostly by the poorer class of people. Mr. Morshead says:—

"The tendency of this effect, when not counteracted by other local circumstances, is to swell the labour market, which, in the absence of sufficient employment, is liable to cause

local distress, especially in this district in the southern and south-eastern portions of it. Fortunately, however, a good crop of cereals reaped in August and September and an abundant crop of lac in several places in the district not only counterbalanced the deficiency of the rice crop, but also caused a rise in wages in some localities. Moreover, there was no want of employment on roads, railways, and coal mines for the greater part of the district, and especially in the Gobindpur subdivision. From these sources means of livelihood were amply available, and the surplus stock of grain from the preceding years prevented any serious rise in prices. Thus, although the inhabitants have been a little pinched in places, there was nothing bordering on distress."

Further, emigration, notwithstanding its abuse, is reported to have done a good deal for the district by taking off the surplus population.

26. In Singhbhum the Deputy Commissioner, Mr. Bompas, reports that though the people are poor, their lot is not unenviable, and he makes the following remarks on their condition:—

"The rise in prices which has occurred of late years necessarily benefits those agriculturists who have surplus grain to dispose of without injuring those who merely grow enough for their own consumption, while the railway and its attendant industries have provided well-paid work for the able-bodied labourer. The Kol, however, is not the man to work unless he is compelled by necessity, and has not yet been greatly seized with the civilised desire to accumulate wealth. Some of the larger agriculturists, however, are not without savings, which they frequently spend generously on tanks and other works of utility. In the Kolhan the regular mahajan is unknown, and there is no such thing as general indebtedness. In pargana Dhalbhum the people were not so well off, but there is still plenty of waste land; and so long as this is the case, the lower classes can exist in a state at any rate of freedom, and in this part of the country the construction of the Sini–Midnapore line is now placing every able-bodied man beyond the reach of want."

27. The Division seems to be fast emerging from the state of things when its population were almost solely dependent upon agriculture for their well-being.

28. On the whole, the year has not been an unfavourable one The excellence of the lac crop, with good sugarcane and *bhadoi* crop, compensated to a great extent for the bad rice and *rabi*. The better class of cultivators, who have a surplus produce to sell, benefited by the high prices of grain; and though the labouring classes must have suffered to some extent from this cause, the rise in wages in many localities, which has occurred in the vicinity of large works and industries, has no doubt helped them to meet the difficulty caused by the higher prices of food.

29. The position of the cultivating classes generally seems to show a tendency to improve as they become more acquainted with their rights, and it is a matter for regret that they show such a strong disposition to claim more than their rights. The opening out of the districts in various directions by the coal and mica-mining and other industries, and the rapid growth of the lac trade is doing much to improve the condition of the smaller cultivators and labouring classes, and, as remarked elsewhere, there is a wholesome tendency for the wages of labour to rise in those localities which are coming into contact with commercial enterprises and industries. The mahajans and traders are generally well off and prosperous, and the only class which seems to be deteriorating are the zamindars and landlords. There is friction between them and their raiyats, so that they find it difficult to collect their rents, and are at the same time losing a good many of the voluntary services and payments they used to receive. Their mode of living, too, is changing and becoming more expensive, so as to suit modern ideas, and to meet such increased expenditure, and the rise in prices generally, there has been no corresponding increase in their rent-rolls. From these causes, added to the usual extravagance in marriage and social ceremonies, which pervades the class, many of the zamindars and landholders are becoming every year more impoverished, and are sinking into a state of indebtedness, from which they can only extricate themselves by the sale of their lands or by seeking the protection of the Encumbered Estates Act. No permanent improvement in their condition can be expected without a settlement of the land question, with a determination of the disputes over feudal rights and services between them and their raiyats, and the reduction of the chaotic state of things regarding the areas of holdings so as to enable adjustments of rent to be made, which will be fair both to landlord and tenant.

VI.—EMIGRATION AND IMMIGRATION.

30. Recruiting of emigrants under Act I of 1882 was carried on during the year in the four districts of Hazaribagh, Lohardaga, Manbhum, and Singhbhum, and the following statement compares the number of emigrants recruited and registered under the Act during the past three years:—

Districts.	1893-94.	1894-95.	1895-96.
1	2	3	4
Hazaribagh	1,962	1,833	2,282
Lohardaga	3,072	2,864	2,422
Manbhum	7,046	7,075 (3,982)†	10,611*
Singhbhum	.....	212	35
Total ...	12,080	11,984	15,350

* These figures are for the calendar year 1895.
† The figures *in brackets* in column 3 against Manbhum are for the calendar year 1894.

The increase in the number of emigrants in Hazaribagh is due to the partial failure of some of the principal crops on which the bulk of the labouring classes mainly depend. In Lohardaga the continued falling off is said to be principally due to the drain of previous years on the emigrating classes, and also to the growing distrust on the part of the people of recruiters and *arkatis* as a class. In Manbhum the increase is very large, and is due to the fact that Purulia being an important centre for recruiting coolies for the tea districts, emigrants from other districts are brought there for selection by garden agents and then sent to the labour districts, or forwarded to other recruiting centres, such as Raniganj, Calcutta, &c. The number of emigrants who were residents of the district was 1,254. In Singhbhum the figures only represent the number of coolies who pass through Chaibassa, those nearer the railway line and those recruited in Dhalbhum going direct to Purulia.

31. Besides the coolies recruited and registered under Act I of 1882, a large number of coolies was recruited under the free-labour system. The exact number of free emigrants from each district cannot be ascertained, as no record is kept, but from reports received from some of the agents stationed in the districts, it appears that 1,770 free emigrants were recruited from Hazaribagh, 884 from Lohardaga, 8,000 from Manbhum, and 502 from Singhbhum, against 1,185, 965, 9,889, and 1,025, respectively, in the previous year.

32. All the cooly-depôts and rest-houses in the districts were regularly inspected by the officers concerned, and proper steps taken to improve their sanitary condition. Proper arrangements for treatment of sick coolies and for the supply of food, clothing, &c., were made in all the depôts. The general health of the coolies was on the whole good all round the year. There were only a few cases of cholera in certain depôts in Manbhum.

33. In Hazaribagh four emigrants were prosecuted and convicted during the year, under section 162 of Act I of 1882, for desertion after registration. There were also two cases under section 342 and one each under sections 346, 363, and 365, Indian Penal Code. The cases under sections 363 and 346 resulted in the acquittal of the accused, the former on account of the persons said to have been kidnapped having been proved to have attained majority, and the latter for want of conclusive evidence against the accused. In this district a few complaints were made from time to time regarding the disappearance of members of families, but in most of them the missing persons could not be traced, while in the few cases in which they were traced, it was ascertained that they were adults and free agents.

34. In Lohardaga there were many complaints of unlawful and fraudulent recruitment, especially of women, but only one case ended in conviction, this being a case in which one Jagarnath Panda and his servant were decoyed into

a depôt and actually carried to Purulia against their will before they obtained a chance of escape. Many other enquiries were made, but all these are reported to be very tedious and unsatisfactory, having to be carried on by correspondence with officers in Assam and elsewhere, and being complicated by the fact that coolies improperly recruited are almost always registered under a false name.

Mr. Streatfeild writes:—

"It usually happens that by the time a cooly so recruited is traced, he or she has got accustomed to Assam, and has no wish to return to Chota Nagpur or to prosecute. On the other hand, a large number of complaints come from relatives of persons where recruitment has been perfectly regular, though it may be inconvenient to the emigrant's family."

In this district there was one case during the year of cancellation of contract under section 11A of Act I of 1882 as amended by Act VII of 1893 in the case of a girl named Jambi.

35. In Manbhum there were altogether 112 cases in which emigrants and recruiters were the accused. Among these, 52 cases were against emigrants for committing offences under section 162 of Act I of 1882, and the remaining 60 cases for offences committed by recruiters under sections 341, 342, 363, &c., of the Indian Penal Code. Of the total number of 112 cases, 79 were tried during the year, 20 were disposed of without trial, and 13 cases were pending at the close of the year. In the cases tried, 22 emigrants and 21 recruiters were convicted, and 12 emigrants and 45 recruiters acquitted. In Singhbhum there were 22 cases of malpractices in connection with recruiting during the year.

* * * * * * *

VII.—PRICES OF FOOD AND LABOUR.

38. As might be expected, the generally deficient harvests of the past year have been attended by a corresponding rise in prices in all parts of the Division except Singhbhum, where the outturn of the crops was much better than in the rest of the Division. In Hazaribagh the price of common rice, the chief food staple for the people, in the last fortnight of March 1896 was only 14 seers and 13¼ chitaks per rupee, against 16 seers 10¾ chitaks and 15 seers, respectively, in the corresponding periods of the two preceding years. Wheat was sold at 11 seers 5¼ chitaks per rupee, against 12 seers 5¼ chitaks in March 1895 and 13 seers in March 1894, and gram at 16 seers per rupee, against 16 seers 5¼ chitaks in March 1895 and 17 seers 5¼ chitaks in March 1894. Salt alone was sold at a cheaper rate, viz., at 9 seers 13¼ chitaks per rupee, against 9 seers 9¼ chitaks and 9½ seers, respectively, in the two previous years. In Lohardaga the price of common rice was only 14 seers per rupee, against 18½ seers in 1894-95 and 17 seers in 1893-94. The prices of salt and wheat remained almost unchanged, while that of gram was slightly lower than in 1894-95, but higher than in 1893-94. Most of the wheat and gram consumed in the district is imported, and their prices, therefore, depend on outside circumstances. In Palamau the prices of wheat, common rice, and gram during the last fortnight of March 1896 were higher than those in the corresponding fortnight of the previous year, these latter being higher, again, than those for the same period of 1893-94. The price of salt alone remained almost unchanged. In Manbhum the prices of wheat and common rice were much higher than in either of the two preceding years; the price of gram was slightly lower than that of 1894-95, while that of salt was slightly lower than that of the two preceding years. In Singhbhum wheat and common rice were cheaper than in either of the two preceding years, while the price of gram was the same as in 1894-95, but dearer than that in 1893-94. Salt was dearer than in either of the two preceding years.

39. The following statement gives the average prices of wheat, common rice, gram, and salt during the last fortnight of March of the past three years:—

District.	1893-94.				1894-95.				1895-96.			
	Wheat.	Common rice.	Gram.	Salt.	Wheat.	Common rice.	Gram.	Salt.	Wheat.	Common rice.	Gram.	Salt.
1	2	3	4	5	6	7	8	9	10	11	12	13
	S. ch.	S. ch.	S. ch.	S. ch.	S. ch.	S. ch.	S. ch	S. ch	S. ch.	S. ch	S. ch.	S. ch.
Hazaribagh	13 0	15 0	17 5½	9 8	12 5½	16 1½	9 5½	9 9½	11 5½	14 13½	16 0	9 15½
Lohardaga	11 0	17 0	14 0 to 15 0	9 0	11 0	18 8	12 0 to 14 0	9 0	11 8	14 0	13 0 to 14 0	9 0
Palamau	16 14	15 12	21 15	8 6½	15 3	15 3	18 9	8 7	12 15	14 10	16 14	8 7
Manbhum	13 0	15½ 0	15 0	10½ 0	12½ 0	21 ½	14 5	10 0	11 0	13 0	15 0	10 ,,
Singhbhum	12 0	13 0	14 0	9 0	12 0	14 0	12 0	8 0	13 0	16 8	12 0	7 14

40. Wages of labour exhibit some fluctuations. In Palamau there has been a decline in wages of most kinds of labour in consequence of the importation of artisans by contractors. In Hazaribagh, in Chattra, the wages of common masons and coolies came down from 3½ annas and 3 annas to 3 annas and 2 annas respectively per diem, while common carpenters, boys, *gharamies*, superior blacksmiths, and common blacksmiths were not available at less than 3 annas, 1 anna, 3 annas, 5 annas, and 4 annas per diem, against 2½ annas, 9 pies, 2 annas, 4 annas, and 3 annas, respectively, in the preceding year. In Manbhum there has been a general rise in the wages of unskilled labour during the past five years, and ordinary coolies are said to be not available in many places for less than 3 annas per diem. This is chiefly due to the demand for labour in the newly opened coal mines and for the tea districts, the construction of the Bengal-Nagpur Railway and the Jharia extension line having facilitated transit to new fields of employment. It is also attributed in part to the excellence of the lac season, which rendered it unnecessary for many who would otherwise have to work to do so. In Singhbhum towards the close of the past year the commencement of work on the railway on the Sini-Howrah line sent the wages of day-labourers up from 2 annas to 4 annas per diem, and wages are still high near the railway at Monoharpur and Goilkera, where the supply of labour is short. In Lohardaga the wages of labour remained the same, as there was no abnormal demand for labour on account of any large public work or railway. On the whole the tendency seems to be towards a healthy increase in the wages of labour in those parts of the Division which are being opened out by railway or commercial industry.

* * * * * * *

VIII.—MANUFACTURES AND MINES.

42. The principal industries of this Division are—

(1) Collection of jungle products, viz., lac, catechu, saboi grass, and tussur cocoons.
(2) Collection of hides.
(3) Manufacture of shellac.
(4) Cultivation and manufacture of tea.
(5) Manufacture of tussur cloths, coarse cloths, and brass and bell-metal utensils and ornaments.
(6) Coal and mica mining.

Lac, catechu, saboi grass, and tussur cocoons are abundant in the jungles, and are largely exported to other districts. Hides are also collected all over the Division, and are exported in large numbers without being thoroughly cured.

43. Lac factories exist only at Bundu in Lohardaga and at Jhalda, Ilu, Raghunathpur, Chas, Balarampur, Topchanchi, Jharia, Chandil, and Nirsha in Manbhum. In Bundu there were 11 factories at work during the past year, against 10 in 1894-95. The quantity of shellac manufactured was 9,000 maunds, against 6,000 maunds in the previous year. The value of the manufactured article in 1895-96 was Rs. 1,40,080, against Rs. 1,32,000 in the previous year. In Manbhum there were altogether 42 factories at work in the places mentioned above, and the quantity of button and shellac manufactured in them was 18,362 maunds, against 6,926 maunds in 1894-95. The lac trade is a growing one, and the cultivation of the lac insect on suitable trees is extensively carried on by the raiyat, and is found to furnish a substantial addition to his ordinary resources. Disputes over the possession of lac-bearing trees are a frequent cause of complaint in the Criminal Courts, so profitable has the industry become, and a good lac season will generally furnish the raiyat with the money to pay his rent. The zamindar also derives a substantial revenue from this source by leasing out to the raiyat the trees on which the lac insect is cultivated.

(*a*) Manufactures.

44. The manufacture of indigo, which used to be carried on by Messrs. Robert Watson and Company in Barabhum and the Patkum Trading Company at Patkum, has been discontinued. Tea-plantations exist in Hazaribagh and Lohardaga. In the former district 6 gardens were at work during the past year, against 4 in 1894. The quantity of tea manufactured was 126,140 lbs., against only 76,795 lbs. in the preceding year. In Lohardaga out of 23 gardens 22 only have furnished returns, which show that the outturn during the past year was 1,110,312·5 lbs., against 222,047 lbs in the previous year. The uneven rainfall of the year, heavy downpours followed by several days of bright sunshine, was very favourable for the development of the leaves and for plucking, but very fatal to the young seedlings transplanted for the filling up of gaps, so that on the whole the season was not an abnormally good one, the increased outturn being due rather to an improved system of pruning than to any increased fecundity of the bushes. The prospect of the tea industry in Chota Nagpur is not very hopeful. The climate is dry, and the soil is not sufficiently deep or rich, while the tea produced is not of a very superior quality. Tussur cloths are manufactured at Raghunathpur in Manbhum, but the quantity of the manufactured article is by no means large. There are only a few families of weavers who bring cocoons and tussur silk from Singhbhum and weave them into cloths. Brass and bell-metal utensils and ornaments used by the common people are manufactured at Chattra in Hazaribagh, at Lohardaga, Palkote, Ramjora, and Jeria in Lohardaga, and at Purulia in Manbhum. Soapstone plates and bowls are manufactured within the jurisdictions of the thana of Chandil and outpost of Ichagarh, and at Madondi in thana Nirsha in Manbhum and in pargana Dhalbhum in Singhbhum. Some of the stone quarries in this last-named pargana are worked with shafts. Coarse cloths are manufactured by the village *Jolahas* in all parts of the Division. They are very strong and durable, and as such are preferred by the common people. Guns are manufactured at Katras and Jhalda in Manbhum, but their number is by no means large. At Jhalda swords and sword-sticks are turned out. These are exported to many places, both in and outside the district.

45. Coal-mining is a very important industry in the Division, and is confined chiefly to the Giridih and Gobindpur subdivisions of the Hazaribagh and Manbhum districts. In Giridih there are four collieries, three of which are worked by European Agencies and one by a native firm. The three collieries belonging to the East Indian Railway, the Bengal Coal Company, and the Raniganj Coal Association have been working since 1871, 1869, and 1876, respectively. The Oriental Coal Company started work in 1887. In the Gobindpur subdivision the number of collieries has largely increased, owing to the settlement of a large portion of the Jharia coal-fields. But the industry has latterly received a check, owing to the fall in the price of coal. This is said to be due partly to the inferior quality of the coal produced, partly to the unbusinesslike terms of the settlements made, and partly to the wasteful system of working.

(*b*) Mines—Coal mines.

Most of the concessions have been made in small areas, whence coal is extracted by quarrying. The quarry pits fill with water in the rains, and become unworkable, and in some cases the seams are spoiled for future working by percolation of the water thus let in; coal-pits also exist in the Sadar subdivision of Hazaribagh in the basin of the Damudar, principally at Ramgarh, Mandu, and along the banks of the Bokaro river. These are only superficially worked, and the coal dug out of them are used only for brick-burning and such like purposes. Some of this coal finds its way to the Lohardaga district.

46. The following table compares the output in tons and the number of workpeople employed in the coal mines of Giridih and Gobindpur during the past three years:—

	Output in—			Average number of workpeople employed in—		
	1893.*	1894.	1895.	1893.	1894.	1895.
1	2	3	4	5	6	7
	Tons	Tons.	Tons.			
Giridih	562,037	571,563	633,649	7,613	8,263	9,510
Gobindpur	65,226	128,086	1,281,294	2,207	4,822	13,246

In the Gobindpur subdivision the output in 1895 has been nearly ten times that of 1894. During a portion of the past year, Dr. Walter Saise was employed in experimenting at Kajaru in Palamau on behalf of the East Indian Railway Company, and is expected shortly to submit a report on the coal-fields there. A diamond drill was received by him at the close of the year, but it did not work during the year.

Mica mines.

47. This industry is confined to the Hazaribagh district, and is gradually gaining in importance. Most of these mines are situate in the Koderma Government reserved forests, and the rest are scattered over portions of Gadis Gawan, Domchanch, Khesmi, Mushmudih Byria, Dorunda and Satgawan. The mica mines in the Government estates and in the Dorunda and Satgawan estates, which are under Government management, have been let out in accordance with the rules framed by the Government. The greater number of the mines situated in private estates are worked by Messrs. Christien and Company. During the past year in the Government estates, 25 new mines were leased out on an aggregate annual rental of Rs. 885. The total current demand of rent of the Government mines amounted to Rs. 11,001 the whole of which, with the exception of Rs. 140-8, was realised during the year. The total output of all mica mines worked in the district is reported to be 8,019 maunds, against 4,849 maunds, in the previous year, and the total number of workmen employed in the mines 5,409, against 3,718 in 1894.

Gold mines.

48. In Lohardaga at Rugudih, mentioned in paragraph 57 of last year's report, gold was found in ferruginous decomposed rocks at a depth of 20 feet. The ore yielded about a pennyweight of gold to a ton of ore, and hopes were at one time entertained that at a greater depth better results would be obtained. A shaft was accordingly sunk to a depth of 40 feet, but it was found that the ore in the lower strata was not as rich in gold as at the higher level. The Rugudih Syndicate have since transferred their works to Gutuhatu, where visible gold was found in December last in a quartz reef. In February a Director and an expert visited Gutuhatu, and it has now been decided by the Syndicate that before commencing mining works on the reef, a tunnel should be driven at dead level with the valley to meet a shaft sunk from the top of the hill. These works are now reported to be in progress, and it is believed that if no obstacles intervene, they will be completed in three months' time. Sanguine hopes are entertained that this reef will repay working. At Thurumba prospecting works have been carried on for upwards of two years, and trial pits and shafts have been sunk and tunnels driven in various localities, but up to this time no hopeful results have been obtained.

In Singhbhum the Bengal Gold and Silver Mining Syndicate were at work at Samij for some months of the year, but the works have been abandoned since December 1895. During the past year a mining concession was granted to Messrs. Jardine, Skinner and Company in the Porahat estate, but they appear to have yet done nothing beyond making a superficial inspection.

Stone lime is raised in Manbhum near the Ramkanali Station on the Bengal-Nagpur Railway. It is said to be made use of locally, and also exported to other places. No statistics are available. There are now no copper or tin mines at work in any part of the Division.

* * * * * * * *

XXIII.—RAILWAYS AND OTHER PUBLIC WORKS.

Railways.

121. The branch line to Patlabari *viâ* Laikdi and Chanch near Barakar, referred to in paragraph 115 of the previous report, was nearly completed and opened up to Chanch. There were no other new constructions during the year excepting the siding line from a point a little to the west of the Dhanbad Station and a short branch line to the mines in and near Kusunda. The construction of the Sini extension has been commenced in the latter part of the year.

* * * * * * *

XXVII.—DISPENSARIES AND HOSPITALS.

152. As regards the dispensary at Ranchi, Mr. Streatfeild reports that the difficulty here as elsewhere is the dearth of subscriptions to the support of the dispensary, and that its upkeep is a serious drain on the resources of the Municipality. The retention of the Assistant Surgeon, who is now in charge of the Dispensary, has been sanctioned by my predecessor, on condition that at least Rs. 900 per annum is raised by private subscriptions. The collection of subscriptions has been undertaken by the Civil Surgeon of the station, and an improvement will no doubt be effected, but it is doubtful whether the sum named will be reached. The Deputy Commissioner is therefore of opinion that, in view of the considerable amount of Government work done by the Assistant Surgeon, and also of the fact that Government owns a considerable part of the town, viz., the village of Konka, the contribution of Government to the funds of the institution might reasonably be increased. The outstanding subscriptions due to the Lohardaga Dispensary are still heavy, but a large portion of them is reported to be irrecoverable, and must be written off the accounts. The financial condition of the Barabazar Dispensary in Manbhum much improved during the year, as there was a surplus cash balance of Rs. 200 at the close of the year after paying up all working expenses.

Leper asylums.

152 (*a*). The Lohardaga Leper Asylum is managed by the German Evangelical Lutheran Mission. There were 21 patients, 6 of whom were new admissions. One patient died of pneumonia, and the others were in good health throughout the year. There are two other houses in connection with this Asylum—one for incurables and the other for the untainted children of lepers or syphilitic parents. The cost of maintaining the Leper Asylum and children's home, which was met by the Society of the Mission to Lepers in India and the East at Dublin, amounted to Rs. 1,640. The cost of maintaining the Asylum for other incurables and the Ranchi Mission Dispensary, which was defrayed by the German Evangelical Lutheran Mission, amounted to Rs. 2,000. The Purulia Leper Asylum, which is in charge of the Rev. Mr. Uffman, of the Lutheran Mission, is reported to be in a flourishing condition. Several new houses on the original premises have been completed, and a substantial pucka building erected not far off for the healthy children of some of the inmates.

Lady Dufferin's Fund.

153. In Hazaribagh the Zanana Hospital in connection with the Lady Dufferin Association, which was opened towards the end of 1894, was brought into working order during

the year, and has afforded much outdoor relief to the classes for which it is intended. No indoor patients have yet been admitted. The hospital is under the charge of a qualified lady-doctor, and 1,273 out-patients, on a daily average attendance of 16·58, were treated during the year. The construction of a zanana hospital at Ranchi on the standard plan approved by the Government was taken in hand and finished with a small bungalow for the accommodation of a lady-doctor at a total cost of Rs. 4,185. The hospital has not yet been opened to the public for want of funds. As in previous years, the Committee here entertained the services of a trained midwife and nurse on a fixed monthly salary of Rs. 30 and house-rent at Rs. 3 per mensem. She was also allowed half the fees earned by her. During the past year the midwife attended 29 cases, out of which 17 were cases of accouchment and 12 cases of sick nursing. Of the former, one was a transverse case. The midwife discharged her duties satisfactorily. The institution at Daltonganj is still regarded by the general public with apathy. The present midwife, Massi Jayi, attended during the year 9 confinements, against 14 in the preceding year. The Civil Medical Officer of Palamau reports that she does not know much about her work, but carries out his orders properly, and to that extent acquits herself tolerably well.

* * * * * * *

XXXIV.—SOCIAL AND POLITICAL INSTITUTIONS AND PUBLIC FEELING.

(c) State of public feeling.

174. Colonel Garbett, the late Deputy Commissioner of Hazaribagh, has left the following note in regard to the state of public feeling:—

"Except in places like Giridih, Hazaribagh, and Chattra, where there are always a number of educated men who take in newspapers and keep themselves acquainted with current topics, &c., there is no public opinion in this district as we understand it. The inhabitants of the rural tracts, the bulk of the population of the district, care nothing for matters occurring beyond the narrow limits of their villages and the immediate neighbourhood. Outside events find but a faint echo in these remote and jungle-surrounded tracts. General interest is only excited and attention awakened when something occurs affecting the people themselves. Nothing of the sort occurred during the year under report. The discontent which existed last year in the Government estates in connection with the village forests being proclaimed protected has died out, as the rules on the subject of supplying villages with timber, &c., for domestic purposes have been framed in a most liberal spirit, and the villagers have no doubt come to recognize that the forests have really been protected in their own interests. The discontent among the Santhals in connection with pachwai-brewing has also died out, as the privilege of brewing pachwai for home consumption has been conceded them. There has been no revival of the cow-protection movement, and all interest in the matter seems to be dying out. Efforts are occasionally made here and there to collect subscriptions to keep up the movement, but with very poor success."

175. In Lohardaga there was nothing calling for special notice, beyond the excitement connected with Birsa Bhagwan, which has been fully dealt with by the Hon'ble Mr. Grimley in his tour account. There is still in the district a good deal of fermentation among the Mundas, and there are at the present moment rumours of a new Bhagwan, but nothing definite is said to have occurred calling for remark. The relations of landlords and tenants in the district continued unsatisfactory. The Deputy Commissioner, Mr. Streatfield, says:—

"The relations are not likely to improve until all claims to feudal services are finally converted into cash rents. This is one of those matters on which there is much to be said on both sides. The zamindars justly say that cash rents in this district are very low, and contend that they were fixed when services really constituted by far the most important part of the raiyat's obligations. On the other hand, when landlords exact services with no regard to moderation or fairness, perhaps taking raiyats from their villages for weeks at a time, it is inevitable that the raiyats should rebel against the old order of things and, as a necessary consequence, attempt to rid themselves of service obligations altogether."

In the districts of Palamau and Singhbhum the state of public feeling is said to have been satisfactory throughout the year. The Deputy Commissioner of Manbhum does not say anything on the subject. Two very important settlements of Government estates—one in the Kolhan, in the district of Singhbhum, and another in Palamau—have been in progress during the year. The raiyats on both these large estates have exhibited a very strong interest in these settlements and the different questions that have arisen in connection with them, but so far the work has progressed without any friction.

176. The only paper published in this Division is the *Gharbandhu*, printed by the German Lutheran Mission at Ranchi. It is a religious paper, having for its aim the religious and moral instruction of the Christian converts belonging to the Mission.

Public press

* * * * * * *

XXXVII.—GENERAL REMARKS.

181. The Hon'ble Mr. Grimley again writes:—

"Now that I am taking leave of a Division whose affairs I have administered for the last seven years, and a people whose interests I have watched over with much solicitude during the same period, it may not be inappropriate to take a retrospect of the principal measures I have been called upon to deal with during my tenure of office. Compared with the rest of Bengal, as I once wrote, Chota Nagpur occupies a unique position. The circumstances which differentiate it from other parts of the Lower Provinces are its comparative inaccessibility, its vast extent, comprising as it does, with the political and tributary states, an area of 45,000 square miles, its climate, its wild and picturesque scenery, its mineral wealth, its beautiful forests, the peculiar nature of its land tenures, and in many parts its primitive inhabitants, with their curious history and traditions. This brief reference to the country, its people, and products supplies an index to many interesting and difficult problems which have from time to time presented themselves for solution. Primitive people are by nature singularly tenacious of purpose and cling to old traditions, and this feeling among the Kols led up to the agrarian agitation of 1889, when they made an effort to free themselves from the yoke of middlemen, the thraldom of *bethbegari*, and other unpleasant incidents connected with the cultivation of land. This was the first important event of my administration, and the outcome of measures taken to suppress the disturbance and to ascertain its causes was the preparation of a Bill for the commutation of predial services in Chota Nagpur. An account of the mineral wealth of the country is given in the memoirs of the Geological Survey, but its potentialities had not attracted much attention from the commercial world until 1890, when the construction of the Bengal-Nagpur Railway through a distant corner of Chota Nagpur brought them prominently into notice, and caused a rush of applications for prospecting and mining concessions, chiefly in respect of gold, copper, and iron. This introduced me to an entirely novel sphere of work, and enlarged my vocabulary by sundry geological terms and expressions, the true import of which, I fear, was not always understood by those improvised mining experts from whose tongue they fell so glibly. To 'ring out the false, ring in the true,' to distinguish between the honest prospector and the plausible land-grabber was a task of considerable delicacy. The determination of rates of royalty, the fixing of the amounts of *salami*, as well as the terms of leases, the consideration of conditions, safeguarding the interests of both parties to the concession, and the preparation of the leases themselves were details requiring much thought and attention, if not the skill of an expert, to deal with them properly. Another result of the railway was to render accessible large tracts of forests to timber contractors, whose sole object was to clear away all saleable trees, regardless of future needs, but this reckless denudation could not be permitted, and it became necessary in forest leases to restrict cutting to trees of a particular girth. This measure was followed by the rules for protected forests, which also had for their object the prevention of the wanton destruction of valuable trees on Government lands. These timber transactions enhanced the value of forest lands and produced a crop of boundary disputes in uninhabited jungly tracts, the settlement of which, in the absence of accurate maps, and with uncertain landmarks, was a most difficult operation. Disputes of this nature are likely to increase as the country gets opened out. Among other administrative measures which have engaged attention, the following may be mentioned:—the determination of the status of the Palamau jagirdars, the commutation of ghatwali tenures, and the management of ghatwali jungles in Manbhum, the improvement of the rural police, the amalgamation of the process-serving establishment, the development of the mica industry in Hazaribagh, the revenue from which has received a substantial increase in recent years, and the formation of the Chota Nagpur Mounted Rifle Corps. In 1890 I made an enquiry into the system of cooly-recruitment for labour in tea-gardens, and submitted an exhaustive report on the subject, in which the abuses connected with that system were fully exposed. I suggested a number of remedies for these abuses, the most important of which was registration in the district of recruitment, enabling each person to declare his wish to emigrate before some constituted authority. The carrying out of these proposals has been long delayed, though with the appointment of the Labour Enquiry Commission I no longer despair of seeing them brought into operation, as the only sound method of preventing malpractices, and at the same time of cheapening the cost of recruitment. Two important settlements are now being carried out, viz., that of the Palamau Government estate in the district of Palamau and that of the Kolhan in Singhbhum. Owing to the peculiar nature of the tenures, the mode of survey and details of settlement in each case required careful pre-arrangement. These have all been discussed and determined in consultation with Government, and the settlement work is now in progress. The settlement of Koilapal and Mahta in the Manbhum district, though of minor importance, also required careful attention. The restoration of Porahat to Kumar Narpat Singh,

the son of the ex-Raja or Chief, has been a troublesome but interesting subject of correspondence for some time, going back to the mutiny of 1857, but it has been finally accomplished, and one of my last official acts was to deliver to the Kumar the *sanad* bestowing on him this property with a zamindari title. This enumeration of some of the chief events of my administration will not be complete without a reference to the long miles of road connecting Ranchi with Purulia and Chaibassa. Both these roads have been completed, the former being bridged throughout and the latter at all difficult places. The Hazaribagh-Ranchi Road has also been re-aligned, and the roads in the Palamau district have been extended and improved. But the construction of these roads is not sufficient for the proper development of the industrial resources of the country. The great need is a liberal extension of the railway system. The Bengal-Nagpur line only serves a very limited portion of Chota Nagpur. It has attracted attention to the mineral wealth of the country and has encouraged a trade in timber, but this trade will die out as soon as the forests near the line are exhausted. The line traverses a very small corner of Chota Nagpur, and is of comparatively little use to the more distant places The cultivated lands on the plateaus of Lohardaga and Hazaribagh do not come within its sphere, while the extensive coal-fields of Karanpura, Auranga, Hutur, and Daltonganj are entirely neglected. Chota Nagpur does not begin at Asansol and end at Chakradharpur, as was once seriously propounded to me by one who ought to have known better. It is a vast territory, stretching from the Damoodar near Asansol on the east and extending to the Central Provinces and the Rewah State beyond Allahabad on the west, and from the confines of Orissa on the south to the districts of Mirzapur, Shahabad, and Gaya on the north. It consists, as I have said elsewhere, of an ascending series of plateaus rising in successive terraces from 800 to over 3,500 feet, and separated from each other by ranges of hills or mountains, which serve as a natural barrier or defence. These terraces are undulating, and in some parts extremely fertile and well-cultivated, while the surrounding hills are covered with dense forests abounding in *sál* and other valuable timber; the whole appearance of the country in its varied aspects of hills, plains, and valleys making a beautiful picture, especially the waterfalls in the Lohardaga district, the Chandwa ghat in Palamau, the Saranda forests in Singhbhum, and the high table-lands in the distant Native States of Jashpur and Sirguja. The cultivated lands yield rice, wheat, barley, oilseeds, Indian-corn, and other cereals, while, besides timber, the miscellaneous forest products possessing a merchantable value are lac, tussur cocoons, catechu, resin, myrabolams, bee's-wax, and fibre grasses convertible into rope or paper. There is also a large export trade in hides and horns. The minerals consist of coal, which is distributed over an area of 6,000 square miles, iron, which is found in several districts, traces of gold and silver, copper, lead, mica, manganese, soap-stone, lime-stone, and China clay. Whether the opening up of this fine country with its immense possibilities is to be consigned to the waters of oblivion, or is to be brought immediately within the sphere of political and commercial enterprise by the extension of the railway system of communication, is a problem which I leave for the consideration of Government, the capitalist, and the mercantile community."

RESOLUTION ON THE ANNUAL GENERAL ADMINISTRATION REPORT OF THE BHAGALPUR DIVISION FOR THE YEAR 1895-96.

GENERAL DEPARTMENT.—MISCELLANEOUS.

Darjeeling, the 2nd November 1896.

RESOLUTION—No. 563T—G.

READ—

The Annual General Administration Report of the Bhagalpur Division for the year 1895-96.

The report is submitted by Mr. W. B. Oldham, C.I.E., and was delayed by the late receipt of the District reports. Mr. G. Toynbee held charge of the Division throughout the year. There were changes of District Officers in all the districts except Malda, of which Mr. J. C. Price held charge the whole year; there were also changes of charge in 6 out of the 13 subdivisions.

2. *Tours and Inspections.*—The Collectors of Purnea and Malda accomplished the prescribed amount of touring. Mr. Price's tours in Malda were particularly complete and useful. The tours of the Commissioner and of the District Officers of Monghyr, Bhagalpur, and the Sonthal Parganas each fell short of the standard by some days. All the Subdivisional Officers spent the prescribed periods or more in camp, except the Deputy Magistrate of Araria, who obtained permission to shorten his tour, as he had been in charge of that Subdivision for nearly six years and knows it thoroughly. All the prescribed inspections were made, except that three of the subdivisional offices in the Sonthal Parganas were inspected only once by the Deputy Commissioner.

3. *Weather and Crops: Material Condition of the People: Public Health.*—The average rainfall of the Division was 43·17 inches, or 15·41 inches less than the mean of the last ten years. The crops generally gave only a moderate outturn, but the *bhadoi* crops were fair; they were best in the district of Purnea, where early paddy, jute, and indigo did very well. On the whole, prices were much the same as in the previous year, nor were the wages of labour appreciably higher, though they have a gradual tendency to rise, except apparently in Monghyr. With the people generally the year was one of prosperity. The condition of the labouring classes in the Sonthal Parganas appears to be improving steadily with the increase of the demand for labour both within and without the district. Emigration to Assam is becoming more popular there, even amongst the Paharia tribes; and plenty of work is to be found on the railways and in neighbouring quarries and coal mines throughout the Division.

The year appears to have been a comparatively healthy one; but the statistics upon which birth and death rates are calculated are admittedly defective, though registration is believed to be advancing. In Purnea and Malda there were as usual numerous deaths directly or indirectly due to malarial fever. Cholera visited Bhagalpur with some severity.

4. *Manufactures and Mines: Trade and Commerce.*—Poppy is grown in Monghyr, where the last season was a good one, the outturn amounting to 2,815 maunds. Indigo is grown and manufactured in all the districts of the Division, and in respect of this crop also the season was good except in Bhagalpur, where the value of the outturn was only half that of the previous year. The silk factories in Malda produced 31,587 lbs. of silk, as against 41,810 lbs. in 1894-95. The only important coal mine in the Sonthal Parganas was worked out and closed in December last.

The imports of food-grains of all kinds amounted to only 1,33,318 maunds; the exports of these stuffs were very large, the total being as much as 58,09,482 maunds, namely, wheat 8,22,267 maunds, gram and pulses 16,75,914 maunds, husked rice 17,97,209 maunds, paddy 3,92,839 maunds, and other food-grains 11,21,253 maunds. 18,18,245 maunds of food-grains were exported by rail to the districts of Darbhanga, Muzaffarpur and Saran. Nearly 11,72,540 maunds were exported to the North-Western Provinces and Oudh by rail, and over 14,38,204 maunds to Calcutta by rail and country boat.

5. *Civil Justice.*—The number of civil suits disposed of in the Division rose by 903 cases to 51,799. The ratio per cent. of witnesses detained over

two days to the total number examined fell from 13·6 to 11·2; the best results in this respect were obtained in the Sonthal Parganas, where the ratio was 1·5. Of the witnesses examined by Munsifs in that district, only 1·3 per cent. were detained more than two days. This year separate figures have not been given for rent-suits in the Sonthal Parganas.

6. *Crime: Police: Criminal Justice.*—Twelve thousand three hundred and eighty-five cognizable cases were reported against 13,342 cases in the previous year; and the non-cognizable cases reported were 12,908 as against 12,713 in 1894. The percentage of cases declared intentionally false rose from 4·7 per cent. to 5·4 per cent. The percentage of these cases in which prosecutions were instituted decreased, by how much is not stated; but it is clear that more attention should be given to the necessity of prosecution and of awarding compensation in these cases throughout the Division, and especially in the Bhagalpur district. Enquiry was refused in an excessive proportion of the house-breaking cases reported.

Ten thousand eight hundred and sixty-seven cases were tried by Stipendiary Magistrates during the year, or 1,242 less than in 1894. The number of witnesses examined decreased by 3,099 to 44,048, but the percentage detained more than two days rose from 3·5 to 5·3 for the whole Division, while in Malda it was as high as 9 per cent. and in Monghyr 8·1. These facts seriously reflect upon the working of the criminal courts of these districts.

Again, 5·5 per cent. of police cases were remanded six times or more, against 4·2 per cent. in 1894. More than half of the cases were, however, disposed of in two hearings, and more than one-third on the first day.

The Honorary Magistrates and Benches disposed of 3,821 cases, 385 more than in the previous year; except in Monghyr and Bhagalpur the witnesses examined before them were promptly discharged. In the first-named district, however, as many as 13 per cent. of the witnesses were detained for two days or more. The attendance of Honorary Magistrates was generally good.

The cases disposed of in Sessions Courts numbered 125; in 72·0 per cent. of these cases convictions were obtained. This result is satisfactory; but the Deputy Commissioner of the Sonthal Parganas remarks that some unnecessary commitments were made to him in his capacity of Sessions Judge. The Commissioner agrees with him and points out that the Deputy Commissioner has power to control the commitments made.

Rupees 86,264 were imposed in fines during the year, and there was a balance of Rs. 39,635 from the previous year. Of the total demand Rs. 78,916 were collected, and Rs. 20,558-13-7 were written off. The outstanding balance is now Rs. 26,691, less by one-third than that of the preceding year.

The working of the police is reported to have been, on the whole, satisfactory. As regards the rural police, considerable progress was made in introducing the provisions of Act VI of 1870; in Bhagalpur and Purnea there are now only a very few of the old Regulation chaukidars left. Care has been taken to reward chaukidars for good service wherever possible.

7. *Land and Land Revenue.*—The total current demand of land revenue is Rs. 33,71,024; the decrease of Rs. 3,998 since the previous year is mainly due to diluvion in Government estates. Rupees 32,90,611 or 97·6 per cent. of the current demand were collected. The arrear demand amounted to Rs. 74,451, of which sum Rs. 67,294 were collected. The following table shows the percentages of current collections on the current demand attained in each district and the standard percentages:—

	In permanently-settled estates.	In temporarily-settled estates.	In estates under direct management.
Standard percentage	99	95	90
Percentage attained in districts—			
Monghyr	99·38	98·47	63·91
Bhagalpur	98·68	85·42	83 05
Purnea	97·57	00.99	55 5
Malda	99·86	99·65	76·18
Sonthal Parganas	99·99	98·88	96 91

In Bhagalpur and Purnea the prescribed standard was not attained in respect of any class of estates, and no district, except the Sonthal Parganas, reached the standard of collections in Government estates. The collections in the Sonthal Parganas were throughout excellent. In Purnea by far the greater part of the outstanding balance on account of permanently-settled estates is due from one defaulter whose estate is to be sold. In Bhagalpur the falling off in collections from estates in class III is said to be nominal rather than real, the tauzi ledger being incorrect. This matter should be thoroughly investigated. The short collection in Government estates in Monghyr is attributed to the destruction of crops by floods. On the whole the collection of rent in Government estates was nowhere satisfactory except in the Sonthal Parganas.

The total current demand of Road and Public Works Cesses was Rs. 9,30,677; of this sum Rs. 7,88,636 were collected. Nearly 10 per cent. of the whole number of estates in the Division (14,650) fell into arrears, but only 97 estates were actually sold.

A new forest division was created during the year for the purpose of managing the protected forests in the Sonthal Parganas.

8. *Wards' Estates.*—There were 7 estates under the charge of the Court of Wards as in the previous year, and no attached estates; the chief Ward's estate is that of Khagra in Purnea. The total demand was Rs. 6,01,343, of which Rs. 4,17,398 or 69·41 per cent. were collected. The total outstanding balance amounts to Rs. 1,57,011; of this sum Rs. 1,23,881 are due to the Khagra Estate, which has not yet had time to recover from the effects of its former proprietor's unsystematic management. Rupees 10,876 were spent on improvements of all descriptions.

9. *Excise: Stamps: Income-Tax.*—The excise revenue rose by Rs. 68,150 to Rs. 14,70,894, an increase of nearly five per cent., mainly under the heads of Country-spirit and Ganja. The incidence per head of population was 2 annas and 9 pies per head against 2 annas and 7 pies in the previous year. The total stamp revenue of the Division was Rs. 11,48,339, less by Rs. 10,486 than in the previous year; 539 persons were convicted of breaches of the stamp law. Eleven thousand three hundred and sixty-two persons are assessed to income-tax. The total proceeds of the tax amounted to Rs. 2,59,949, or 97·9 per cent. of the gross demand.

10. *Education.*—There are now 5,326 schools in the Division, 247 more than in the previous year; there are 7,373 more pupils at school, bringing the total up to 106,940. Still the proportion of the number of pupils to the whole estimated number of boys of a school-going age in the Division is very low, being only 14·7 against 46·1 per cent. in the Chittagong and 31·1 per cent. in the Presidency Division. Primary schools number 3,763. The number of pupils of aboriginal races is increasing steadily though slowly. There was a satisfactory increase in the number of Muhammadan pupils at school, the percentage of such pupils to all pupils being 22·2, while the Muhammadan male population forms only 19·71 per cent. of the whole male population. The total expenditure on education was Rs. 4,16,112, exclusive of inspection charges, scholarships and miscellaneous charges.

11. *Hospitals and Dispensaries.*—There are 37 public and private dispensaries in the Division; at those institutions for which statistics are available 179,477 patients were treated. There are also two leper asylums. The large district of Purnea, nearly 5,000 square miles in extent, where education is also extremely backward, has only three dispensaries.

12. *Local Self-Government Institutions.*—There are ten Municipalities in the Division; that at Jamui was abolished in the previous year. The Commissioner has suggested the formation of a Union Committee at this place as well as at Kishanganj, where the Municipality now includes rural areas unsuited to this form of self-government. The accounts of the Bhagalpur Municipality are reported to be in a confused state. Little is said as regards improvements in sanitation; but Municipalities appear on the whole to have worked without friction. So indeed did the District Boards, if the incidents connected with the election of a member to the Legislative Council be left out of account. These bodies kept the existing roads in fair repair as far as their funds allowed, but were not able to undertake much new work.

13. *The number of Muhammadans employed* by Government now bears a greater proportion to the whole number of officers than does the number of Muhammadans in the Division to the whole population. Of a total number of 789 ministerial officers employed, 164 or 20·78 per cent. are Muhammadans, while the total Muhammadan population forms 19·78 per cent. of the whole population.

14. *Social and Political Institutions.*—There are nine social and political societies, clubs or committees in the Division, seven of which are in the districts of Bhagalpur and Monghyr. Some of these Societies support widows and orphans; and the Muhammadan Association at Bhagalpur keeps up a school.

15. *The conduct of Zamindars* is reported with a few exceptions to have been generally peaceful and loyal.

16. The Lieutenant-Governor thanks Mr. Toynbee for his careful administration of the Division and Mr. Oldham for his clear and concise report, from which extracts are published for general information.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,

Offg. Secretary to the Govt. of Bengal.

Extracts from the Annual General Administration Report of the Bhagalpur Division for the year 1895-96.

* * * * *

III.—WEATHER AND CROPS.

21. Mr. Toynbee left the following note on the weather and crops:—

"The main feature of the year's weather was the unusual drought which prevailed during the latter part of the year. From 1st October to 31st March hardly a drop of rain fell. What would have been an unusually fine rice crop was, where no means of irrigation exist, almost entirely spoiled for the want of one or two heavy showers in October. The rabi crop was similarly affected. Though to outward appearance a fair crop, the ears of wheat, &c., did not fill, and the outturn was considerably below the average. Owing to the good harvests of preceding years no distress was occasioned by the partial failure of crops above alluded to beyond that generally occasioned by want of water and grazing. The southern parts of Monghyr and Bhagalpur districts and those parts of the Sonthal Parganas which border thereon were the tracts chiefly affected. In both of these railway surveys are now in progress, and if any pinch is felt during the coming year, there will be no difficulty in finding plenty of work for those who require it. A great deal depends on the outturn of the bhadoi, and the tracts most affected will require careful watching until the outturn of the next rice crop is known."

22. The statement given last year is subjoined:—

District.	Rainfall.		Outturn of crops taking 16 annas as the average outturn:			Remarks.
	Average of 10 years.	In 1895-96.	Bhadoi.	Winter rice.	Rabi.	
1	2	3	4	5	6	7*
Monghyr ...	49·48	38·64	12½	7¾	11⅛	The figures in column 2 are taken from the Bengal Administration Reports.
Bhagalpur ...	53·35	44·86	14¾	11¾	10	
Purnea ...	72·57	64·82	16	12	12⅛	Those in column 3 are from the District Annual Administration Report.
Malda ...	58·04	33·72	12	12	14	
Sonthal Parganas	59·43	38·82	13¾	10	10	Those in columns 4 to 6 are taken from the Director of Land Records and Agriculture's final reports.
Divisional average	58·58	43·17	13¼	10⅜	11⅜	

23. Any special circumstances in each district noticed by the District Officers are detailed below:—

In the district of Monghyr, the unirrigated rice, wheat and several of the rabi crops gave a poor outturn. Janera, maize and mustard seed, on the other hand, were good crops, and paddy lands having dried early, pulses were extensively cultivated.

In the district of Bhagalpur the distribution of rain throughout most of the district was fairly level and the bhadoi crops were good.

In the district of Purnea the rainfall in the beginning of the year was fairly distributed, and good bhadoi and jute crops were gathered in the Sadar and Araria subdivisions. The Collector writes:—

"Bhadoi paddy is very extensively grown in Purnea as being the safest and surest of all crops. The area under this crop is yearly increasing."

The cultivation of the other bhadoi grain crops is limited. Taking each crop separately, the winter rice which is the most important crop of the district

was only a 12-anna crop; the rabi, mustard seed and other oil seeds were below the average; tobacco and sugarcane were 14-anna crops, jute was a 15-anna crop, but indigo, owing to favourable weather, was a bumper crop.

The average rainfall of the district of Malda was 33·72 against 60·42. Not only was the rainfall scanty; but the rainy season was limited. But the Collector adds:—

"The year on the whole was seasonable in spite of unusually protracted drought. The general health of the people was fairly good, and no disease appeared in an epidemic form."

The season was favourable for the bhadoi crops, which yielded a fairly good outturn. The outturn of kalai, wheat, barley, peas and mustard seed was, owing to the drought, reduced to 10 annas in places; to 8 annas in others. Mulberry, indigo and jute gave a fair outturn. The Collector has noticed two peculiar phenomena in connection with the season. The rivers did not rise sufficiently to inundate the country and fertilise the soil, and the local storms called "nor-westers" were conspicuous by their absence. The average rainfall of the Sonthal Parganas was 38·82, which is not much more than half the normal quantity. Fortunately one important crop, Indian-corn, was a bumper one everywhere. Bajra was also good, but the winter rice all round was under 10 annas, and both the rabi crops and the bhadoi crops (except Indian-corn) were defective. These reports received after Mr. Toynbee wrote his note show that, however bad the season was, it was not disastrous.

It is worth mentioning that both in my last division and here I have been unable to dispense with the district and subdivisional crop and weather reports which Sir George Campbell instituted in 1872, and which, except for selected centres, were done away with in 1894. Some of the District Officers have found themselves in the same position.

* * * * *

V.—MATERIAL CONDITION OF THE PEOPLE.

35. The opinions of the District Officers are given. The Collector of Monghyr begins his report on the material condition of the people in his district during the past year by saying that on the whole their condition was better than in the preceding year. The people of the Jamui subdivision, where there are no *deara* lands, were, however, less fortunate than their brethren in the other two subdivisions. Mr. Marriott pities the middle classes, who, having acquired a smattering of education, have forsaken the calling of their forefathers and imbibed a hankering for Government service, and have thus made themselves miserable. The condition of the artizan classes remained almost unchanged. Their wages appear even to have fallen.

36. The Collector of Bhagalpur reports that the material condition of the people in his district has undergone but little change in the past year. In spite of the early cessation of the rains and the almost entire absence of rain from October to April, the people, as a whole, he says, have felt no change in their ordinary circumstances. Stocks from previous years were plentiful, and prices did not rise.

37. The Collector of Purnea, Mr. Bernard, writes that with the people of his district the year was one of prosperity. The agriculturists were well off. The supply of land is in excess of the requirements, and in most villages the extent of cultivation depends only upon the capital and industry of the husbandman. Poor labourers can usually obtain employment with ease. On the contrary the difficulty in this district is to find labour. The people of a few villages in the Sadar subdivision suffered from floods, and small advances were made to them to buy seed in February and March. The greater portion of those, however, who had applied for help were found to be well off and really able to help themselves. The common people of the Kishanganj subdivision are generally well off though not given to luxury in any shape save indulgence in litigation. Their litigious habits are said to swallow many a man's savings, and this single subdivisional area mainly supports the Purnea Bar.

38. With the help of the good harvests of bhadoi and winter rice crops during the preceding two years, and the yield of the bhadoi paddy during the year under report, the people of the district of Malda, after meeting their own wants, were able to export large quantities of grain. The growers of mulberry and the rearers of silkworms made moderately good profits, and thus the effect of the partial failure of winter rice and rabi crops was not much felt. On the whole the condition of the agricultural classes was prosperous. The prices of food-grains ruled high in the latter part of the year owing to prolonged drought though not so high as in the preceding years.

39. The labouring classes in the Sonthal Parganas have now, both owing to the local demand of railways, quarries, coal mines and other large employers of labour and to the demand for the tea gardens, a good market value, so that to keep a man at home, the local employer must treat his labourer well. The chief evil of this outside demand is that bread-winners are sometimes induced to desert their families which suffer want. Such cases of desertion are now constantly come across. The other noteworthy observations made by Mr. Carstairs are given in his own words:—

"The everlasting game between the money-lenders and the raiyats continues. Mr. Smith (Pak·ur) says raiyats often borrow, even when they have money by them, out of old habits or to put burglars off the scent, or to avoid their neighbours' envy.

"The most remarkable movement this year was, I think, the sudden growth of popularity among the central Paharias of emigration to Assam. Those who starved and stole at home are now many of them giving good service in the tea gardens. Other Paharias are getting good work in connection with *sabai* grass, so that our most wretched class are now looking up."

VI.—EMIGRATION AND IMMIGRATION.

Monghyr.

40. The number of emigrants registered in the district of Monghyr is gradually decreasing. There was no recruitment through the agency of female recruiters. A criminal case of the ordinary kind of combined decoy and restraint was brought in the Jamui subdivision, in which two of the accused persons were convicted by the Subdivisional Magistrate under section $\frac{341}{342}$ of the Indian Penal Code and sentenced to six months' rigorous imprisonment each, and another accused person was sentenced to one month's simple imprisonment and to a fine of Rs. 50. There are two places for accommodation of sardari emigrants and four depôts for the accommodation of free emigrants in this district, but the whole business is on the decline.

Bhagalpur.

41. On the whole there is but little emigration from the district of Bhagalpur. There were four depôts for the accommodation of emigrants for tea gardens in Assam.

42. There is no regular emigration from the districts of Purnea and Malda. From Purnea people go to Calcutta, Assam, Rangoon and other places to work as grooms, shoeing smiths, &c. The people of Malda do not go to seek work elsewhere, but, as further east, labourers annually visit that district and find employment in road making and similar work.

43. The following extracts are taken from the Deputy Commissioner's report on this head in the Sonthal Parganas:—

"The vexed question of emigration to Assam may be dismissed with a few remarks this year, as the matter has been thoroughly investigated by the Labour Commission, whose report is now being awaited with great interest. The number of emigrants for Assam registered under the Act during the year was 151 labourers and 118 dependants. They were registered only at Dumka and Deoghar. The emigration to Assam that now takes place is almost entirely what is called 'free,' that is conducted by unsupervised agents or sardari.

"Mr. Adlam for the Sonthal emigration scheme sent up for the gardens employing him 1,553 labourers and 100 dependants during the year.

Mr. Smally for Messrs. Barry and Company works on the same principle as Mr. Adlam, but I have not thought it right, pending the result of the report of the Labour Commission, to give his work recognition, being strongly convinced of the evil of competition. He registers his contracts, which are not under the Act, at the Registration office. Cases of other 'free recruiters' registering similar short contracts have been noticed, but it is somewhat difficult under the present rules to ascertain whether they are duly carried out or not.

"There were 43 criminal cases connected with emigration, chiefly under section 363 (Kidnapping) and section 417 (Cheating). The usual difficulty was found in getting emigrants who were parties in such cases back from Assam.

"The business of the arkatis seems to have fallen off. The number of coolies recruited for Government service in Chittagong was 17 sardars and 441 coolies. The work of recruiting and despatching them was entrusted by Mr. Bernard to Mr. Adlam, who has given satisfaction by the manner in which he did it. The service on his part was gratuitous, only actual expenses out of pocket being paid for.

"There is a good deal of temporary emigration to the coal-fields from the south-west and the north of the Ganges and the Duars on the north and east of the district. No figures are kept."

44. Up to 1883 there was none of this emigration from the Sonthal Parganas. In 1880 it was impossible to get a single transport cooly thence for the Naga expedition of that year. In 1891 the terms for the coolies for Chittagong were Rs. 12 and rations and full clothing. In the course of four years they came down to Rs. 7, rations, and a blanket. What kept the people so stationary up to 1883 was no doubt the benefit and credit and the actual money in pocket given to them by Sir George Campbell's settlements which were not completed till 1880. The changes since must be mainly due to pressure of population, but no doubt the unchecked transfers of lands had their influence in the years immediately following 1883.

VII.—PRICES OF FOOD AND LABOUR.

Prices.

45. From a comparison of the prices of food staples during the last fortnight in March 1896 and during the last fortnight in March of the preceding year, it appears that there has been no difference to speak of. Taking each district separately, it is found that in the Sadar and Banka subdivisions of Bhagalpur, the price of common rice remained the same as in the previous year, while it was cheaper in the Madhipura and Supaul subdivisions. The Collector writes:—

"There is a striking feature about the prices of wheat and gram in three out of the four subdivisions. In spite of the deficient outturn of the rabi crops this year, there is a perceptible fall in the prices in the year under report. This apparent inconsistency is attributable to the fact that stocks from the abundant harvests of the preceding year are still available, and these together with the new produce are keeping the market from going up."

In Purnea common rice sold at 18 seers per rupee in the beginning of April. The price remained almost unchanged with little variations from time to time till August, when it rose to 16 seers a rupee. It fell to 20 seers in the latter end of August, and continued stationary till the end of March, when it again rose to 18 seers the rupee. The price of wheat was 13 seers per rupee during the first two months of the year. It fell to 16 seers in June, and with some fluctuations was steady at that price till the close of the year. The prices of other food-grains ruled higher than in the preceding year.

In the district of Malda the prices of food-grains, especially common rice, remained almost unchanged, and that of gram fell to its normal level; but the price of wheat is said to have ruled higher owing to the deficient crop and to large exportation, thus contradicting the Bhagalpur experience.

The principal food-grains of the Sonthal Parganas are Indian-corn and rice. The crop of the former was unusually large during the year under report, and consequently, though rice was reduced in quantity by failure of the rains, there was little pinching.

Wages

46. There has been no decided change in the rates of wages for skilled or unskilled labour, but there is a tendency towards increase in all kinds of labour except, as already noticed, in Monghyr, where the tendency seems to be to fall.

In the district of Purnea this tendency, the Collector states, is due to the unhealthy climate. No outsider goes there if he has a choice, and the consequence is the indigenous worker, more or less, commands his own price. I gather that not so long ago there used to be immigration of Dhangars to Purnea.

In the Sonthal Parganas the onward tendency of the rates of wages is gauged not so much by any actual rise in rates as by the growing difficulty in getting labourers on the old terms. Mr. Carstairs writes that the chief disturbing element is the demand for tea gardens and coal mines, and this is shown by

the fact that a man is sometimes able to earn three annas and a boy two annas a day, rates once unheard of. Apparently in the Sonthal Parganas real market rates are taking the place of the old local seasonal and traditional rates. That the supply is not equal to the demand in all parts of the division is proved by the fact that at the time of harvesting rabi crops and mustard in the district of Monghyr ordinary labourers come from other districts. Coolies employed on road making and repairing in Malda also come from outside the division.

* * * * *

XXIII.—RAILWAYS AND OTHER PUBLIC WORKS.

Railways.

132. Mr. Toynbee has left the following notes :—

"The surveys for a line from Lakhisarai to Gaya, to be called the South Bihar Railway and for a line from Bhagalpur to Nonihat and thence to Deoghar on one side and to Ahmadpur on the loop line on the other, were commenced during the year, and are still in progress. Both are important lines which will, in my opinion, pay handsomely and be of the utmost advantage to the division from a general administrative point of view. The District Boards concerned should, I think, prepare plans and estimates beforehand for the metalling and bridging of existing roads which will form important feeders to the above lines and for the construction of new ones. The Bhagalpur line will, if completed to Ahmadpur, open out the Sonthal Parganas and have an important bearing on its future administration. The talked of line from Garhara on the Tirhut State Railway through Begusarai to Katihar has not been heard of during the year. It crosses the Kosi river and many of its offshoots and should not be lightly undertaken without full consideration of the possible and probable effects on the drainage of the country. Another line which has been projected from Khagaria (opposite to Monghyr) through the North Bhagalpur subdivisions of Madhipura and Supaul to the Tirhut State Railway at Nawabganj and Bhaptiahi and thence to the Nipal frontier would, in my opinion, be less open to engineering objections, and would not only pay a better dividend, but would be of more general assistance to the administration. It would also afford protection against famine to the tracts which suffered so much in 1874."

* * * * *

XXVI.—EDUCATION.

145. The following table compares the number of schools and the number of pupils attending them during the last two years :—

Class of Institutions.	1894-95.		1895-96.	
	Schools.	Pupils.	Schools.	Pupils.
1	2	3	4	5
Public Institutions.				
Secondary ... High English ...	18	3,498	21	3,747
Secondary ... Middle „ ...	35	2,095	31	1,775
Secondary ... „ Vernacular ...	45	2,743	47	2,927
Primary ... Upper Primary ...	244	10,051	263	11,050
Primary ... Lower „ ...	3,155	66,353	3,266	70,984
Special	14	358	12	316
Female	272	4,559	337	5,364
Total ...	3,783	89,597	3,977	96,243
Private Institutions.				
Advanced teaching—				
(a) Arabic or Persian	315	2,793	323	2,859
(b) Sanskrit	138	1,173	157	1,308
Teaching Koran only	96	364	104	361
Other schools	747	5,140	768	5,869
Total ...	1,296	9,970	1,349	10,397
Grand Total ...	5,079	99,567	5,326	1,06,940

146. There has been a further net gain of 247 schools and 7,373 pupils. The increase is shared *by all* the districts, though in the Sonthal Parganas it was in secondary education only, while there was a decrease in the figures of schools and pupils under both upper and lower primary education; and Malda, which had been showing a decline for some years, gained both in schools and pupils. There was an increase both in the number of schools and pupils in Monghyr, Purnea, and Malda; in Bhagalpur there was a loss of schools, but a gain in pupils. Under the head of Special schools in the Sonthal Parganas, there is a decrease of two schools, but a gain of 58 pupils. The Deputy Commissioner states that the guru under training passed the middle vernacular examination and left, and no new guru has yet been sent for training in his place.

Female education.

147. Female education shows a gain of 65 schools with 805 pupils. Monghyr shows the largest increase, viz. 62 schools, and 716 pupils.

Entrance examination.

148. Out of 188 candidates who appeared at the Entrance examination 79 passed. Of these successful candidates only 6 were Muhammadans. Of the Government zilla schools, Monghyr passed only 1 out of 15 candidates, Bhagalpur passed 17 out of 23, Purnea 5 out of 12, Malda 6 out of 8, and Dumka 4 out of 6. Among the aided schools, that at Jamalpur passed 9 out of 13 candidates, and the Jamui and Begusarai schools 1 each out of 3 and 2, respectively, the Pakour school 8 out of 9, and the Deoghur school 2 out of 3. The unaided schools in the districts of Monghyr, Bhagalpur, and Malda, 6 in number, passed 25 candidates.

Twenty-five middle English schools sent up 81 candidates for the Middle Scholarship examination, of whom 55 passed, 28 obtaining middle English and 27 middle vernacular certificates. Thirty-nine middle vernacular schools sent up 128 candidates, of whom 61 were successful.

One hundred and fifty-seven upper primary schools sent up 369 candidates, of whom 234, including 3 girls, passed, representing 134 schools. Four upper primary schools, exclusively for girls, sent up 17 pupils, of whom 10 passed from 3 schools; 42 pupils of secondary schools and 21 private students obtained upper primary certificates. Out of 2,987 boys and 12 girls from 953 schools, 2,346 boys and 12 girls representing 811 schools passed, as well as 114 girls from 39 lower primary, exclusively girls' schools, and 20 from 5 upper primary, exclusively girls' schools. Secondary schools passed 55 and upper primary schools passed 759 boys and 3 girls besides 111 private students.

149. The number of Muhammadan pupils in all classes of schools increased from 22,063 to 23,818. The number of Muhammadan pupils on the 31st March 1894 was only 20,678. The Muhammadan male population forms 20·03 per cent. of the total population, and the percentage of the Muhammadan pupils to all pupils has now risen to 22·2. The comparative suddenness of this change explains why the proportion of successful Muhammadan pupils is so much lower.

150. The number of pupils of aboriginal race also increased from 6,183 to 6,514, and more or less in all districts. In the Sonthal Parganas the increase was from 5,598 to 5,771. The majority of pupils of these aboriginals are Sonthals, 104 were Paharias, 85 are returned as Dhangars and 2 as Kols. There were 260 Sonthal schools against 204 in the previous year. Taking the population and the children of school-going age in the Sonthal Parganas, there was 1 Sonthal in every 14·5 and 1 Paharia boy in every 90 at school. The Sonthals are about 1 in 3 and the purer Paharia about 1 in 35 of the population. The expenditure from the Sonthal education grant of Rs. 7,500 was Rs. 7,499 against Rs. 7,493 in the year before. One hundred and ninety-seven Sonthals and five Paharias passed public examinations last year.

151. The total expenditure on account of education (including charges for inspection, scholarships and miscellaneous charges) was Rs. 5,20,201 against Rs. 4,67,155 the year before. Government contributed Rs. 98,997, District Boards Rs. 95,208, and Municipalities Rs. 9,191, against Rs. 99,337 from Government, Rs. 90,415 from District Boards, and Rs. 8,371 from Municipalities in 1894-95. The income from fees amounted to Rs. 2,12,949 against Rs. 1,92,511, and from other sources Rs. 1,03,766 against Rs. 76,521.

152. If the above statistics, which have been obtained from the Assistant Inspector of Schools, are correct, they represent very satisfactory progress. I see, however, that they differ slightly from those furnished by the District Officers, and will try to have the discrepancies reconciled, and to ascertain which source is to be most relied on for the future.

153. The following points for notice are taken from the reports of the District Officers:—

In Purnea there has been an increase in private contributions, which is thought to give grounds for believing that primary education is expanding steadily among the people of this very conservative district.

Regarding the Purnea technical school, the Magistrate writes:—

"The number of pupils in the technical school was 15, that is the same number as returned last year. The total expenditure incurred by it during the year under reference was Rs. 2,530, and the sale proceeds amounted to Rs. 1,172. So the net sum spent by the Board on it was Rs. 1,358 against Rs. 2,295 in the preceding year. The cost per pupil was Rs. 168-6 against Rs. 189-8 the previous year. The school continues to be under the control and supervision of the District Engineer. The boys do not stay long enough to become skilled workmen. After acquiring a smattering of carpentry, they leave the school and set up as *mistris* in their villages."

About the education of the Muhammadans in his district, the Magistrate writes:—

"The percentage of Muhammadans to the total population of the district is 41·4, and that of the Mahammadan pupils under instruction in schools of all kinds to total pupils is 50·7 against 51·4 in the previous year."

The Magistrate of Malda writes:—

"The Sidheswari Institution at Chanchal had on its rolls 97 pupils against 87 pupils in the preceding year, 83 of them being Hindus and 14 Muhammadans against 69 Hindus and 20 Muhammadans in the preceding year. This school receives no aid from the public funds, and is supported by Babu Sarat Chandra Rai Chowdhuri, proprietor of the Chanchal Estate, who has dedicated the institution to his mother Sidheswari Debya. The result of the school at the matriculation examination was two boys passed out of four sent up.

"The high school at Nawabganj, called the Hari Mohan Institution, after the name of its supporter, Babu Hari Mohan Mallik, zamindar, was opened during the year under review. It had 77 pupils on the rolls on 31st March 1896. The expenditure of the school amounted to Rs. 2,398—Rs. 588 from fees and Rs. 1,810 from endowment. This is also an unaided school. It passed two boys at the matriculation examination out of seven sent up."

154. There were three industrial schools in the Sonthal Parganas. The Dumka carpenter's school is carried on on a small scale. There were two apprentices at this school which does not receive any aid from Government. The Pakour industrial school, in which different kinds of handicraft are taught, had eight apprentices. The expenditure on this institution was Rs. 1,735, of which Government contributed Rs. 135. The industrial school at Madhupur is maintained by the East Indian Railway Company for the technical education of their employés. It had 67 apprentices. I intend to speak to the Deputy Commissioner about the Sonthal industrial schools. Sonthals have always been looked on as incapable of skilled labour, but in the South Lushai Hills under local exigencies several of them showed considerable aptitude for carpenter's and sawyer's work and for tasks, which are the real test of work of this kind.

* * * * *

XXX.—LOCAL SELF-GOVERNMENT INSTITUTIONS.

167. There are now 10 municipalities in the division (two in each of the five districts) against 11 the year before. The Jamui Municipality in the district of Monghyr was abolished last year, but there is still plainly a number of local needs, the cost of supplying which is proposed to be thrown on the District Board. I have asked the Magistrate for proposals for the formation of a Union Committee to replace the Municipality. There has been little or no change in the condition of the municipalities,

	Municipalities.
Monghyr	Monghyr.
	Jamalpur.
Bhagalpur	Bhagalpur.
	Colgong
Purnea	Purnea.
	Kishenganj.
Malda	English Bazar.
	Old Malda.
Sonthal Parganas.	Deoghar.
	Sahibganj.

and they seem to have worked pretty nearly in the same ways as hitherto.

Monghyr.

168. The Monghyr Municipality held ten general, eight special and 2 Sub-Committee meetings. A good drainage system and one for the supply of pure drinking water continue to be the crying want of the town. A comprehensive project for proper drainage is now under preparation. The Commissioners spent Rs. 2,917 on education. The Monghyr public garden is in charge of a Municipal Commissioner. The Government made a contribution of Rs. 300 for its support, and its maintenance cost the Municipality Rs 381. The Jamalpur Municipality held eight general, one special and two Sub-Committee meetings. It spent Rs. 573 on education. As the town is mainly in the hands of the employés of the East Indian Railway Company, sanitation is well attended to.

Bhagalpur.

169. The rates levied in the Bhagalpur Municipality are a 7 per cent. house rate, a 3 per cent. latrine rate, and a water rate levied in certain wards of the town. The collections were not satisfactory. Out of the total demand of Rs. 70,305 only Rs. 46,980 were collected, and, excluding remissions, there remained an outstanding balance of Rs 21,542. Of the total expenditure of Rs. 65,604, 25·8 per cent. was spent on conservancy, 24·1 per cent. on water-supply, 9 per cent. on drainage, and 7·2 per cent. on the medical necessities of the town. The charge of establishment was 8·3 per cent. The Government has sanctioned a loan of Rs. 3,00,000 for the extension of the water-works, the cost of which has been estimated to be Rs. 3,13,600. The internal economy of this important Municipality is in a most unsatisfactory state. The Accountant-General, Bengal, has informed it that if the accounts are not in a better condition than they were at last year's audit, he will report that no audit can be held. I myself see no remedy except to improve the establishments, and to spend more on them, since it is plain that the voluntary executive will not undertake the minute and laborious duties demanded even if they were competent to discharge them.

Purnea.

170. The Purnea Municipality held 14 meetings; besides which 5 meetings were abortive for want of a quorum. The Kishenganj Municipality held 24 meetings. The Chairman accords the Commissioners credit for taking an interest in their affairs. The Magistrate writes:—

"It would be a very good thing if the Kishenganj Municipality were abolished, except that it maintains the dispensary at Bhariadangi. The rural tract included within its limits is not suited to a municipal institution."

I have suggested that the substitution of a Union Committee be considered as at Jamui. The tax on holdings in the Municipality of Purnea continued to be levied at 6 per cent. After the close of the year the Commissioners resolved to raise it to $7\frac{1}{2}$ per cent. The Magistrate writes:—

"I became Chairman of this Municipality after the close of the year, at a particularly busy time. I am not able yet to express an opinion on the interest taken by the Commissioners in business. The chief wants of the town are improved drainage and conservancy. The latter, it appears to me, cannot be effected without levying extra taxation under Part IX. The former is possible to a certain extent. Both matters are receiving attention. It is difficult to get enough coolies even to clear out the main drain at this season, and as for sweepers, it is impossible to get a sufficient number without importation from outside the district. The first step in improving the conservancy will be, if the Commissioners agree to levy a latrine-tax, to import sweepers and settle them so that they will be content to remain here."

There is no difficulty in either Municipality as to water-supply, and this matter has lately received full attention.

Malda.

171. The English Bazar and Old Malda Municipalities held 21 and 19 meetings respectively besides 3 and 2 adjourned meetings. They spent Rs. 849 and Rs. 396 on education. Both are stirring little institutions, with some resemblance in their proceedings to debating clubs.

Sonthal Parganas.

172. The Sahibganj Municipality has hitherto had at its head the local District Traffic Superintendent of the East Indian Railway, but owing to constant changes in the *personnel* of that office, the work of the Municipality has greatly suffered lately. The present Vice-Chairman, who is the resident Hospital Assistant, assisted by a Commissioner of long standing, Babu Hari Das Marwari, has, however, managed to keep things going. There is nothing of importance to record regarding the Deoghar Municipality. The Deputy Commissioner writes:—

"As for non-statutory Self-Government institutions, they are to be found in all parts of the Sonthal Parganas, and approach much more nearly an English idea of Local Self-Government than most parts of Bengal with which I have any acquaintance, taking charge of police and road work, sanitation and the like. We have in our indigenous institutions a most valuable material which, with a little well-spent work, could be developed and organised into a most valuable instrument for the prosperity of the district."

There is no doubt that the Central Provinces system of Local Government can be successfully worked in the Sonthal Parganas.

District Boards.

173. The business in the hands of the District Boards which caused most stir last year was the election of a member of the Bengal Legislative Council. I am unable, however, to say how far this excitement was felt by the masses or the rural population, or if it pervaded them at all. The final electorate of the Boards failed to come to a preponderating opinion, and the elections ended in a tie. Government cut the knot and appointed the Maharaja of Gidhour to the seat in the Council. The Magistrate of Monghyr says nothing about the District Board.

174. The District Board of Bhagalpur held 16 meetings, 3 of which had to be adjourned for want of a quorum. The Board spent Rs. 1,071 only on sanitation, but this seems to be a matter of account. It is contributing handsomely to the Bhagalpur water-works. The District Board of Purnea held 13 general and 3 special meetings. The Local Boards were entrusted with the maintenance of the village roads within their jurisdictions, and seem otherwise to have as little scope and usefulness as elsewhere. The District Board of Malda held eight ordinary and five special meetings, and five meetings were adjourned. There is no Local Board in Malda, but the question of Union Committees has been taken up there in anticipation of the proposed legislation which will render the intermediary of Local Boards unnecessary.

175. It is to be gathered from the reports that all the District Officers are well satisfied with the working of these Councils. In Monghyr the notice of the Local Boards which as Councils are superfluous and as executive bodies have large areas and the smallest of powers is unusually disparaging, but is, I believe, just.

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF THE CHITTAGONG DIVISION FOR THE YEAR 1895-96.

GENERAL DEPARTMENT.—MISCELLANEOUS.

Darjeeling, the 2nd November 1896.

RESOLUTION No. 3512.

READ—

The General Administration Report of the Chittagong Division for the year 1895-96.

THIS report is submitted by Mr. F. H. Skrine; but Mr. W. B. Oldham held charge of the Division throughout the year 1895-96. Messrs. J. D. Anderson and Agasti were in charge of Chittagong and Noakhali, respectively, the whole year. In the district of Tippera and in all the subdivisions except Brahmanbaria, there were changes of charge.

2. *Tours and Inspections.*—The Commissioner spent six weeks in the Hills, besides touring for 80 days in his Regulation districts and in Hill Tippera. The tours of the Collector of Chittagong and of the Subdivisional Officer of Cox's Bazar fell short of the standard by 3 and 9 days, respectively. The prescribed inspections were all made except in Chittagong, where Mr. Anderson was unable, from pressure of routine work, to hold formal inspections of his own offices; also the subdivisional offices in Noakhali and Chittagong were each inspected by the Collector only once. These omissions are not satisfactory, and the explanation given by Mr. Anderson shows that a better distribution of work is required in Chittagong. The Commissioner is requested to give his attention to this.

3. *Weather and Crops: Public Health: Material Condition of the People.*—The rainfall was below the normal and ill-distributed in all three districts, and the crops did not reach the average except in Tippera, where rice and jute yielded full crops. A storm on the 2nd October did serious damage in Noakhali.

The following are the death-rates per mille returned for each district:—

Chittagong ...	... 30·8	Noakhali ...	... 25·2
	Tippera	... 26·7	

The rates are so low that there must certainly be considerable room for improvement in registration; and it is useless to institute a comparison with the rates given for previous years. Chittagong and Tippera appear to have been peculiarly affected by cholera during the year.

The price of rice rose steadily through the year, and is still rising; the crop of 1895-96 was not a full one, and much of the previous year's produce had been exported. Mr. Skrine says that prices have risen generally in the district of Chittagong since the opening of the Assam-Bengal Railway (in July 1895), but the rise had begun before that time. In the north of the Division the excellent jute crop compensated the cultivators for an inferior rice harvest, and the labouring classes found ample employment on the railway works. The wages of unskilled and skilled labour are very high in the Chittagong Division. The condition of the people of the Division is generally good. As the Commissioner remarks, the jute trade has thrown a flood of wealth into the country. The great majority of the people, who are cultivators, have benefitted by the rise in prices of rice and other crops, while the small class who depend solely on fixed incomes are deteriorating in wealth and in other respects.

4. *Manufactures: Trade and Commerce.*—968,949 lbs. of tea were manufactured and exported, showing a decrease of 106,999 lbs. from the previous year's outturn. The paddy mills in Chittagong turned out 100,688 maunds of rice.

The Assam-Bengal Railway has been opened for traffic from Chittagong to Chandpur and to a point 30 miles north of Comilla. The opening of the railway has already caused changes in the channels of traffic, which are likely

to be accentuated in the future. There was a very large expansion of the trade of Chandpur. The Commissioner dwells on the great development of this inland port, which has an admirable situation at the confluence of the Megna and Padma. Both here and at Chittagong arrangements are being made for the construction of goods-yards; at present the railway has no station buildings and very few feeder roads.

The total trade of the port of Chittagong is valued at Rs. 2,76,83,482, or Rs. 6,16,044 more than in the previous year; the increase is ascribed mainly to larger exports of jute. Twenty vessels cleared from Chittagong for foreign ports, and 620 for Indian ports during the year; the total tonnage of ships clearing was practically the same as in the previous year; but the number of *balam* boats paying port dues decreased by nearly one-third. The ship-building industry is declining, and only one small vessel was built here during the year. 25,538 tons of rice and paddy were shipped from this port, and 45,427 tons of jute, against 37,834 and 37,494 respectively in the previous year. The total exports of these commodities from the Division by internal routes amounted to 13,544 tons of rice and paddy, and 10,817 tons of jute; no figures are available for comparison with the trade of previous years. The bulk of the inland trade of the Division is with Calcutta, and the chief imports are salt, cotton and piece-goods, and kerosene oil.

5. *Civil Justice.*—There was an increase in litigation; the number of title suits increasing by 839 to 11,627 and the number of suits relating to money or moveables by 3,803 to 29,941. Arrears were, however, reduced. The Commissioner attributes the increase in litigation to the settlement proceedings, a multitude of notices under section 424 of the Civil Procedure Code having, he says, been received during the year. In point of fact, however, there was a decrease in litigation in the Chittagong district, which the District Judge attributes to the settlement proceedings, and the Lieutenant-Governor is informed that only 10 suits have been actually instituted up to date in connection with the settlement proceedings since their commencement. The increase occurred in districts in which settlement operations were not in progress. The total number of notices under section 424 of the Civil Procedure Code received during the year was only 219.

6. *Crime: Police: Criminal Justice.*—Excluding nuisance cases 4,892 cognizable and 11,820 non-cognizable offences were reported, about 1,152 offences less than in the previous year. Cognizable crime, however, shows an increase in Noakhali. 8,457 cases were tried, or 970 cases less than in the previous year. 1,295 out of the whole number of cases were tried by Honorary Magistrates. Of the witnesses examined by Stipendiary Magistrates, only 2·4 per cent. were detained over two days, a percentage which shows an improvement on the previous year and is in itself satisfactory; but Honorary Magistrates, though the number of witnesses they examined (3,053) was less by 594 than in 1894, detained 16 per cent. for more than two days against 10 per cent. in the previous year. The detention of witnesses by Honorary Magistrates is unsatisfactory and demands the attention of the District Officers. Their work in this respect was worst at Chittagong and best at Chandpur. 1,516 cases were sent up by the police and 628 of them disposed of on the first day; 3·2 per cent. were remanded six times or more (including 6 of the 28 police cases tried by Honorary Magistrates). No appeals were lodged against the decisions of the Noakhali Bench and of the Marine Magistrate at Chittagong. The Lieutenant-Governor is pleased to notice the excellent attendance of Honorary Magistrates at Chittagong.

Eighty-four cases were tried at the Sessions and 61·9 per cent. of them resulted in conviction.

Fines to the amount of Rs. 41,439 were imposed during the year; Rs. 38,965 were collected and the outstanding balance reduced from Rs. 11,529 to Rs. 7,719.

In Noakhali the police did good detective work in connection with several important cases. It is stated that in Chittagong district the unhealthy climate and the high prices of provisions make it difficult to secure recruits of a good class. With regard to the rural police, it is to be regretted that only 260 chaukidars in the Division were rewarded for good work, while

1,898 were punished; the experiment of employing *dafadars* as supervisors is being tried with fair success in Tippera.

7. *Land Revenue.*—The current demand on account of Land Revenue and Road and Zamindari Dâk Cess in the Division was Rs. 32,24,636; and the outstanding arrears amounted to Rs. 1,32,938. Out of the total (current and arrear) demand Rs. 31,99,170 were collected. In permanently-settled estates the percentages of current collections on current demand surpassed the standard of 99 per cent. in all three districts; and the following table shows the percentages attained in respect of the other classes of estates :—

Temporarily-settled estates (standard 95 per cent.)			Government estates (standard 90 per cent.)
Chittagong	...	100	92·44
Noakhali	...	84·92	84·16
Tippera	...	99·6	83·76

It is not explained why Noakhali has fallen short of the standard in respect of both these classes. Chittagong is the only district that has worked up to the standard in respect of all three classes of estates, a result which considering the great multiplicity of petty estates in that district is highly creditable to the Collector. Rs. 5,49,754 were collected on account of Road and Public Works cesses out of a demand of Rs. 5,99,368; the standard of 95 per cent. for current collections was nowhere reached.

There was a large decrease of almost 25 per cent. in the number of certificate cases instituted, and it was distributed over all classes of demands except those of Court of Wards' estates. It is not understood why, in view of recent orders, the number of certificates in Wards' estates should have increased, and no explanation has been furnished. The disposals did not keep pace with institutions except in Tippera, and the number pending at the close of the year 1895-96 was greater by one-sixth than in 1894-95. The Lieutenant-Governor thinks that the results of the revenue administration of the Division are generally satisfactory; but would be glad to receive an explanation of the delay in the disposal of certificate cases.

Mr. Skrine insists upon the necessity of providing larger sums of money for the improvement of Government estates. It is, however, observed that in all the districts the amount spent for this purpose fell far short of the amount allotted, and that only Rs. 11,097 were spent in the whole Division against an allotment of Rs. 21,300. This matter should receive the early attention of the Commissioner.

A considerable amount of business was done in connection with the acquisition of land for the Assam-Bengal Railway, and five Deputy Collectors were employed on this work during the year.

8. *Wards' Estates.*—There are 14 wards' estates and estates held in trust in the Division. Their total current demand on account of rent and cesses was Rs. 95,407 in Noakhali; and Rs. 2,84,423 in Chittagong. There are no such estates in Tippera. Of these amounts 89·8 per cent. was realized in Chittagong, and only 62 per cent. in Noakhali. The standard of 90 per cent. was attained in five out of the ten estates in Chittagong, and in only one estate in Noakhali. In the latter district only Rs. 478 were spent on improvements, but in Chittagong the expenditure on this account was Rs. 8,304. The estates of Miss Courjon and Bhubanjay Shaha in Noakhali and of Rajkrishna Bandopadhya and Jnanendra Bejoy Ray in Chittagong show very large outstanding balances which every effort should be made to reduce either by collection or remission.

9. *Excise: Stamps: Income-tax.*—The total excise revenue rose by Rs. 49,362 to Rs. 3,38,183; and the incidence is now 1 anna 3 pies per head of population. The greater part of this revenue is contributed by Chittagong district. The revenue derived from spirits in this Division is comparatively insignificant, a fact ascribed to the influence of Muhammadan and Hindu revivalists. Mr. Skrine believes that smuggling of opium is carried on on a large scale both among the many streams of Tippera and Noakhali, and across the Arakan frontier, in spite of a number of seizures made during the year under report. The importation of salt by sea was 32·3 per cent. in excess of the previous year, the quantity imported being 13,564 tons in 1895-96 against 10,252 tons in 1894-95, and the Commissioner ascribes the increase to the

increased facilities for distribution afforded by the Assam-Bengal Railway. Stamps yielded a revenue of Rs. 15,38,860 against Rs. 14,66,000 in the previous year, and the income-tax produced Rs. 96,708; 5,110 persons were assessed to this tax.

10. *Working of the Lodging-house Act.*—This Act is in force only in the area surrounding the well-known shrines of Sitakund; the cholera hospital there has been rebuilt, and land is being acquired for the construction of three reservoirs of drinking-water.

11. *Education.*—There were 4,859 schools during the year with 140,951 pupils, or 340 schools and 2,238 pupils less than in the previous year. Of the estimated number of boys of a school-going age in the entire Division, 46·1 per cent. were at school. In Chittagong district the percentage of boys who were at school on the total estimated number of boys of a school-going age was 48·5, in Tippera 40·3 and in Noakhali 53·6. On the whole the attendance was exceedingly good and compares very favourably with some of the other Divisions of the Province. There were 14,833 girls at school; 120,058 Muhammadans were among the pupils, or 5,594 less than in the previous year; the chief decrease being in Tippera. Rs. 4,04,977 were spent on education, or Rs. 11,326 more than in 1894-95; of this sum, Rs. 2,39,021 were spent on primary education. An apprentice department was opened in connection with the Elliott Artizan School at Comilla, which was affiliated to the Sibpur College during the year.

12. *Dispensaries and Hospitals.*—There are 35 of these institutions in the Division, and 225,145 patients were treated in 1895 at a cost of Rs. 37,844. The Tippera District Board now entertains permanently four native doctors who travel about, each in his own allotted area, treating the sick.

13. *Local Self-Government Institutions.*—District Boards appear to have worked well and without friction during the year; though for some reason unexplained they failed to spend more than Rs. 6,27,432 out of an income of Rs. 8,51,704. The Tippera Board spent but little more than two-thirds of its income. The Boards are reported to be alive to their responsibility for the maintenance of roads and communications, and the Commissioner has directed their attention to the necessity of providing feeder-roads to the new railway line according to a definite scheme.

Five Village Unions were started during the year in the Tippera district; but in none of them was any work done.

There are five municipalities in the Division; that at Chittagong has an income of Rs. 63,525, of which it spent only about two-thirds altogether and only Rs. 815 on primary education. A very unsatisfactory account is given of the working of this municipality, and the Lieutenant-Governor trusts that the current year will show a decided improvement. Comilla had an income of Rs. 25,728; but the other three municipalities have incomes of less than Rs. 8,000 each. Cox's Bazar and Brahmanbaria spent more than the prescribed proportion of their incomes on primary education; the others did not reach the standard.

14. *State of Public Feeling.*—Some interest has been taken among the educated classes in the proposed transfer of the Chittagong Division to Assam, but according to Mr. Skrine the masses neither know nor care anything of it. The survey and settlement proceedings have, the Officiating Commissioner says, created a feeling of unrest, which, he adds, has found vent in a flood of litigation; but, as already remarked, the latter statement is not borne out by the facts.

15. *Political.*—Mr. C. S. Murray, C.I.E., continued in charge of the Chittagong Hill Tracts till 20th March last, when he was relieved by Mr. J. A. Cave-Browne. The crops, with the exception of winter rice, cotton and mustard, were better than in the two previous years. Prices of food-grains ruled high, to the advantage of the hillmen, in consequence of the smaller imports of paddy from the plains. The importation of piece-goods is increasing. Cholera prevailed from April to the end of 1895; but there was no small-pox.

An excluded local fund has been formed for the improvement of the bazars; and permission to open shops is being granted freely in order to encourage

trade. It is in contemplation to reorganize the rural police by the allotment of service-holdings.

There were 1,048 pupils at schools, being 90 more than in the previous year; the Government High English School at Rangamati appears to have been conducted with but little success. It is pleasing to note that 10 passed out of 14 pupils who went up for the lower primary examination, and that the first on the list was a Chakma girl.

The Land Revenue demand in the Hill Tracts was increased to Rs. 12,544 by the revision of the Chakma Chief's *jama*.

Major J. Shakespear, D.S.O., had charge of the South Lushai Hills during the year; he has since left the district after five years' service there. In December and January a successful expedition was undertaken in concert with the Burma and Assam authorities against the Chiefs Kairuma and Jaduna. The latter was captured and the tribes of both Chiefs were disarmed.

The administration of the State of Hill Tippera was carried on without friction by the Maharaja and his sons.

16. The Lieutenant-Governor's thanks are due to Mr. Oldham for his efficient administration of the Division. Mr. Skrine's report, from which extracts are published for general information, is clear and concise.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,

Offg. Secretary to the Govt. of Bengal.

Extracts from the Annual General Administration Report of the Chittagong Division for the year 1895-96.

* * * * *

III.—WEATHER AND CROPS.

14. The rainfall during the year was not only deficient in quantity, but was ill distributed, and consequently the crops did not flourish as they did in the preceding years.

15. In Tippera the rainfall was less than that of 1894-95 by 12 inches and of 1893-94 by 48 inches. The *aus* gave 16 annas and the *aman* 16½ annas, against 17⅔ annas and 19⅓ annas, respectively, in 1894-95. Jute, however, rendered 18 annas, as in the previous year. The cold-weather crops were about the average.

16. In Noakhali the rainfall was 100·65, against 117·83 in 1894-95 and 145·74 in 1893-94. The rains began late and ceased early. The storm of the 2nd October caused considerable injury to property and crops. The low-lying paddy near the sea was almost entirely lost. Insects appeared some weeks after the gale and did some mischief; and many of Government estates suffered from a plague of rats. The *aman* was 4 annas and the *aus* 3 annas short of the average. Some parts of the littoral on the main land and the islands of Hatia and Sundip suffered more severely than the rest of the district. The northern and north-western villages, where excessive rain is harmful to agriculture, yielded a very fair outturn of *aman*. Jute showed a slight improvement, being 14 annas, against 13 the year before. Disease attacked the betel-nut plantations, and in some parts of the district half the plants perished.

17. In Chittagong the rainfall was below the normal, and the harvests did not reach the average.

* * * * *

V.—MATERIAL CONDITION OF THE PEOPLE.

23. The great bulk of the population of this Division depends solely on the outturn of their crops. An abnormally low and ill-distributed rainfall reduced the yield of paddy, which is the most important staple, and pressure was felt the more severely because the previous year's demand for exportation had seriously depleted stocks for future consumption.

24. In Chittagong the prices of food-grains generally have risen since the opening of the Assam-Bengal Railway, but this rise has not materially affected the condition of people of the lower order. The Magh population in the south of the district are said to be gradually losing ground, for Muhammadans and low-caste Hindus are adopting industries which were once monopolized by them. An instance is to be found in the cook's profession, for which Maghs were believed to have peculiar aptitude. The number of *cordons bleus* who are really Mongolian is now very limited, for the great majority of so-called Maghs are Hindus. In consequence of this invasion many Magh families have emigrated to Arakan, where, too, numbers of the ordinary population proceed yearly, returning with large sums gained in harvest work. In Tippera the bumper crops of 1894-95 are said to have relieved the distress which affected the poorer classes towards 1893-94; and though the results of last year were not so favourable, the yield sufficed to prevent a recurrence of pressure.

25. An important factor in the maintenance of prosperity in the north of the Division is the jute crop. This gave a return above the average, while the demand increased owing to extensions to Calcutta mills and the growth of manufacture in Europe and America. This process was fully maintained. A flood of wealth was poured into the country. Tippera is a great producing district, and though much of the profits was absorbed by middlemen, enough remained for the raiyat to compensate for the loss sustained by an inferior rice harvest.

26. The progressive rise in the price of food-grains which benefits the agriculturist, has the opposite effect on the condition of the classes above him, who are not directly concerned with the produce of the soil. As in other parts

of the Province, the *bhadra lok* sections are steadily deteriorating in material prosperity, and therefore in other respects. The landless labourers, on the other hand, throve considerably, for abundant work was available for them on the railway, while the annual migration to Arakan, already noticed, circulates great sums of money in the south of the Division. On the whole the year was one of solid prosperity.

VI.—EMIGRATION AND IMMIGRATION.

27. Beyond the annual migration to Arakan above alluded to, there is little to record in the way of movements of the people. The pressure on the soil is severe nowhere, and emigration is unknown. The reputation of these parts from a sanitary point of view is so bad that immigration is equally unknown. There was an usual influx of labour in Tippera from the Upper Provinces at harvest time and the equally customary exodus from Noakhali to Backergunge when the late paddy ripened there.

VII.—PRICES OF FOOD AND LABOUR.

28. Owing to inferior harvest results the price of rice, which is the staple crop of the Division, rose everywhere. Except in Chittagong, those of other food grains showed no noticeable fluctuations.

29. As regards wages of labour, slight changes were observed in Noakhali and Tippera. In the former district the wages of skilled and unskilled labour dropped from ten and five annas to eight and four annas, respectively—a fact due to the introduction of Chinese and other foreign workmen by the railway authorities. In the latter district a good carpenter can now be had for 12 annas as compared with one rupee last year. On the other hand, a rise from six annas to eight annas was observable in the daily wage of blacksmiths. Speaking generally, the wages of all descriptions of labour rule very high in this Division. There was a drop in Noakhali, due to immigration, but things will speedily right themselves. In Tippera a common coolie can earn nearly six annas per diem, which increases to eight annas at harvest times.

30. In Chittagong the wage is at least five annas for the commonest form of labour, and even at those rates the supply is uncertain.

* * * * *

ACQUISITION OF LAND FOR THE ASSAM-BENGAL RAILWAY.

148. A short account of what has been done for the acquisition of land needed for the Assam-Bengal Railway is given below.

149. Four Deputy Collectors were employed on the work in the Division of whom two, namely, Babu Ganga Charan Chatterjee and Babu Rasik Lal Sen, were in Tippera. The former had charge of the second, third and a portion of the fourth division of the line, extending over 65¼ miles, and the latter of the remainder of the fourth division extending over 40·33 miles. Both the officers completed their proceedings during the year, final reports of which were submitted to the Board. The total area acquired is 4,471 acres, of which 26 acres covering roads belonging to the District Board were given free of cost. The total compensation awarded was Rs. 7,26,458, being Rs. 6,881 per mile. Rupees 7,06,804 were paid, and of the balance, Rs. 14,101 were placed in civil deposit on account of disputes about the apportionment, Rs. 1,429 in revenue deposit on account of death or non-appearance of claimants. The total number of cases disposed of was 6,486.

150. In Noakhali Babu Ashutosh Sarkar was in charge of 35 miles of the second section of the railway, 18 of which, lying in Tippera, were subsequently transferred to Babu Ganga Charan Chatterjee. The work has been finished, and the submission of the final report awaits orders on a reference made to the Board. The total compensation paid amounts to Rs. 29,957.

151. Babu Nityananda Bhar had charge of 49 miles of the first section in Chittagong, and a second officer, Babu Behari Lal Mukherji, was deputed to assist him. The latter was employed chiefly in attesting settlement records in the northernmost 15 miles of the line. Out of 2,608·93 acres for which declarations were issued, 1,095·93 acres were actually taken up during the year. The cash compensation paid, including other charges, amounted to Rs. 9,16,785.

The rate of compensation per mile was about Rs. 7,488 on an average, excluding the 15 per cent. additional compensation. The proprietors were paid from 6 to 8 annas share of the compensation, and the tenants from 8 to 10 annas. In the case of rent-free and taraf lands, the compensation was calculated at 20 years' purchase of the gross rental, minus the Government revenue and collection charges at 10 per cent.; and at 10 years' purchase of the rental subject to the same deduction as in the case of noabad land. Six thousand two hundred and thirteen cases were disposed of up to the end of the year. The work here has been conducted with an absence of tact and regard for formalities, which will assuredly lead to serious trouble hereafter.

* * * * *

XXIII.—RAILWAYS AND OTHER PUBLIC WORKS.

172. The great event of the year was the opening of the Assam-Bengal Railway from Chittagong to Chandpur at the confluence of the Megna and Brahmaputra and for a distance of 30 miles north of Comilla, the length within this Division being about 157 miles. It is a single line on the metre gauge, and the rolling-stock is of the latest and most perfect pattern. The permanent-way, however, leaves much to be desired, as it is not yet ballasted, and night running must cease when the rains set in. There are no stations other than mat huts, and only one feeder road has as yet been constructed. But though cut off from many of the centres of trade, this railway is already working a vast change on the economical and social condition of this Division. It has revolutionized the salt trade, and will certainly monopolize that in jute from the eastern districts. With proper appliances at Chandpur and Chittagong, for the construction of which arrangements are in active progress, there can be no question that the southern section of the line will give a rich return to the proprietors. Whether they have been well advised in extending their operations into Assam is, to my mind, open to considerable doubt. The accidents reported during the year were as follows :—

(1) A coolie jumped out of a ballast train while in motion, and was run over and killed.

(2) A man was knocked down by the engine of a material train and died from the effects.

(3) A man was run over by a down mixed train. This is believed to have been a case of suicide. None of the railway servants were held to blame.

* * * * *

XXXVII.—GENERAL REMARKS.

259. The chief event of the year was the opening of the southern section of the Assam-Bengal Railway, the effect of which is already evident in the improved appearance of the town. The harvests were poor and public health indifferent in Chittagong and Tippera, but there have been no conspicuous public calamities. The smuggling of opium into Burma continues to bring gain to those engaged in the trade at Calcutta and at head-quarters, and this in spite of an unusually successful year in the matter of seizures and convictions. A curious feature in the seizures was that in the majority of cases nearly the same quantity of opium was concerned. This seems to point to a limit of issue which might furnish a clue to its source. Most of the smuggled stuff, however, seems to be Calcutta excise opium, and its passage through this Division, though opposed to excise regulations, is not a source of loss to the public revenue.

* * * * *

CHITTAGONG HILL TRACTS.

262. Mr. C. S. Murray, C.I.E., Assistant Commissioner, was in charge of the Hill Tracts from April 1895 till the 20th of last March. Mr. J. A. Cave-Browne, Assistant Superintendent of Police, administered the Bohmong's circle throughout the year. Mr. R. A. Stephen, Deputy Magistrate, succeeded him,

when he was recalled to Rangamati to take over charge of the Hill Tracts from Mr. Murray.

263. Mr. Murray was on tour for 96 days, during which he inspected police-stations, schools, dispensaries, plough-lots, and the Bohmong's circle office. Mr. Cave-Browne was out for 113 days. He visited plough-lots, made assessments and collections in the mauzas, held sales of garjan kholas and fisheries lot, and inspected police-stations in the Bohmong's circle.

State of crops, public health, and material condition.

264. All crops, with the exception of winter rice, cotton, and mustard, compared favourably with those of the two preceding years. The people, especially the *Jumias*, regained a measure of their normal prosperity. The yield of cotton, though below the average, did not materially affect the resources of the *jum* cultivators, as stocks from the previous years were large. The falling off in the import of paddy from the plains raised the prices of food-grains in the local market, and the hillmen were thus able to dispose of their surplus stock with advantage. Owing to the poor outturn, the price of cotton also ruled as high as Rs. 5-8 per maund, against Rs. 3-8 in the preceding year.

265. Cholera of a sporadic form broke out in the Bohmong's circle, and in Ruma it assumed the character of an epidemic. The disease is said to have been imported from Chittagong into Bandarban, whence it spread to Ruma. It prevailed with more or less intensity from April to the close of 1895. There were 123 deaths from cholera, Ruma alone accounting for 69, Bandarban for 24, Lama 17, Chandraghona 8, and Rangamati 5. Small-pox did not visit the hills. Their immunity is attributed to vaccine operations being pushed into outlying places, where population is sparse and which are nests of disease. The number of persons vaccinated was 6,762, against 14,204 and 16,962 in 1894-95 and 1893-94, respectively. The number of successful cases was 96·18, against 98·14.

Manufactures and trade.

266. The articles manufactured in the Chittagong Hill Tracts are tea, coffee of superior quality, crude sugar, and home-spun cotton cloth.

267. The principal imports are piece-goods, paddy, husked rice, tobacco, salt, and dried fish, and the exports are paddy, tobacco, cotton, mustard and garjan oil, and sesamum. It is a noticeable fact that there was a larger importation of piece-goods than in 1894-95, which the Assistant Commissioner ascribes partly to the improved condition of the hillmen, and partly to a growing taste for foreign manufactures in preference to the very coarse but durable cloth manufactured by their women. The import of paddy and rice fell, owing partly to the partial failure of the crops in the neighbouring districts and partly to the existence of heavy stocks of food-grains in the Tracts. The exports of cotton and oilseeds declined owing to poor harvest results.

268. The number of trade centres increased from 15 in 1894-95 to 19. Of these, 3 on the Feni and 1 on the Karnafuli are in a more flourishing condition. They are resorted to twice a week both by hillmen and Bengalis from the neighbouring districts. Applications to start shops in these and in outlying places were freely granted as an encouragement to trade.

Administrative changes.

269. An excluded local fund was formed with the collections from bazars under Government sanction; and a scheme for sanitary improvement of the bazars on river banks was set on foot towards the close of the year. A few *karbaries* were given limited supervision, and remunerated by service lands. As an experimental measure, the Chandraghona ferry, previously held rent-free by a hillman, was sold by public auction. The administration of the police lock-up at Rangamati has been vested exclusively in the Commissioner and the Assistant Commissioner of the Chittagong Hill Tracts, and its connection with the Chittagong Jail has been entirely severed.

Police.

270. The work of the police in the Hill Tracts does not call for any special remark. The scheme for the reorganization of the rural police was resumed during the year. After the annual *punnya* of the Chakma Chief's estate, the Dewans, headmen, and others present at a meeting were consulted as to the feasibility of appointing *karbaries* remunerated by service lands as village chaukidars. It was

explained to them that 25 acres of service lands yielding at least Rs. 100 per annum each, would be vested in each *karbari*, and they were asked whether they thought this remuneration would secure the proper stamp of men. The Dewans and headmen unanimously admitted the usefulness of *karbaries* in this capacity, but opined that the land grants would not be attractive unless they included areas already reclaimed or a condition of the grant was that compensation for the original outlay in reclaiming the lands would be paid by Government in cases of *karbaries* resigning, dying, or becoming physically unfit for duty. These conditions were to apply only to the reclaimers of the land. They suggested that in mauzas where arable lands were not available a percentage on the collections might be paid to *karbaries*. The whole matter was referred to my predecessor, whose opinion is reproduced below:—

"Neither suggestion can be accepted, but the object of each suggestion is clear and reasonable.

"Each case of succession to service land and office would be dealt with on its merits by the Assistant Commissioner, and, where the case required it, the Assistant Commissioner would require a newly-appointed incumbent to pay the compensation awarded by him to the outgoer or his family before the new man is installed."

271. Forty-nine *karbaries* were appointed in the Mong Chief's circle on the recommendation of the mauza headmen, but the award of service lands as remuneration has not yet been made in all cases, nor has the work to be done by the recipients yet been defined.

Education.

272. There were altogether 61 schools and 1,048 pupils, against 53 schools and 958 pupils in 1894-95. These figures give one school on the average for every 88 square miles, against one for 102 square miles in the preceding year. The pupils in attendance included 486 Chakmas, 32 Tonchangyas, 119 Tipperas, 10 Riangs, 7 Tsâks, 1 Kuki, 266 Mughs, 44 Gurkhas, 11 Assamese, 43 Muhammadans, and 27 Hindus. As in the previous year, the Government Boarding Institution at Rangamati was the only high English school in this subdivision. Its roll number on the 31st March 1896 was 77, against 84 on the corresponding date of the previous year. The number of boarders dropped from 45 to 41, and that of dayscholars from 39 to 36; while the total expenditure rose from Rs. 5,126 to Rs. 5,744, and the expenditure defrayed by Government from Rs. 4,507 to Rs. 5,129. The school is in the fifth year of its existence as an Entrance school, and for the third time has sent up boys for the Entrance examination. In each of the two previous years out of four boys sent up, two were successful. In the last examination, however, two who went up failed to pass. The cross list shows that each of them failed in one subject only, and passed creditably in the other three, securing more than the aggregate pass marks. Evidently there is something rotten in the management of the school, which cost Government more, and was less numerously attended and less successful than in previous years. Primary education is gradually advancing in these hills. Of 14 candidates sent up from lower primary schools, 10 passed Amongst the successful ones was a Chakma girl, who stood first in the list and had a special prize worth Rs. 48 awarded her.

The Chiefs.

273. The minor Chakma Chief, Kumar Bhuban Mohan Ray, continued to study in the second-year class of the Presidency College, and his step-brother, Ramani Mohan, in the Hare School, Calcutta. The former went up for the University First Examination in Arts, but failed owing to ill-health a few days before the examination. He is very intelligent and studious, and was profoundly discouraged by the result of the test. It is not to be wondered at that he has expressed his unwillingness to return to Calcutta, where the surroundings are very uncongenial to a hillman. The Assistant Commissioner agreed that he would do better on his native heath, and might learn something of the management of his estates as now carried on by Dewan Kristo Chandra. His brother, Ramani Mohan, is a very delicate child; and as the brothers are deeply attached to each other, it was deemed unwise to separate them. Thus, though the younger lad was making fair progress at the Hare School, both have been removed to Rangamati, where the one is learning to rule, and the other is a pupil at the local high school.

274. Next in local rank comes the Bohmong, or Phru Tsanes Chaudhuri, with the title of Kyet Thaye Zaung Shewe Salwa Yamin, conferred on him in 1891. He is now well stricken in years, and might gracefully retire in favour of his son.

275. The young Mong Chief Niphrusain, locally called "Mong Raja," managed his estate independently both in the Hill Tracts and in the regulation district during the year under report. He is steady and intelligent.

276. There has been no change as regards the circle or taluk divisions.

Land revenue.

The number of mauzas rose from 160 in 1894-95 to 161, the total approximate area 1,166 square miles, remaining unaltered. Five mauzas in the Mong Chief's and six in the Chakma Chief's circles changed their headmen, two owing to deaths and nine because the headmen previously selected were forbidden to hold more than one mauza each. During the year under report nine taluk dewans were appointed in the Chakma and three in the Mong circle.

277. The number of holdings in defined and undefined mauzas increased from 2,641 in 1894-95 to 3,295 in 1895-96. The defined mauzas alone embrace 3,134 holdings, the number in the undefined ones being 161. Twenty-three of these holdings are special grants containing large areas. Six hundred and seventy-six are valid plough leases under the rules of 1881 and 1884; and the remaining 2,596 are detached holdings covered by *amalnamas* granted under the rules of July 1892.

278. The leaseholds under the rules of 1881 and 1884 were 666 at the commencement of 1895-96, and not 566 as reported last year. The number increased during the year, owing to regrants on appeal in many, and it would have further increased but for relinquishments in the southern portion of the Bohmong's circle owing to the ravages of wild elephants. The increase in the number of detached holdings under *amalnamas* is due to the examination of old *jamabandis* on the spot and the discovery of concealed cultivators in both defined and undefined mauzas.

279. During the year under report an effort was made to allot 50 acres of service lands to each mauza in the three circles. The Bohmong circle had its full allotment in this respect; but the absence of the requisite arable area in many mauzas, formed during previous years, has retarded the completion of the scheme in the Chakma's and the Mong Chief's circle. Many applications were put in and the mauzas were defined; but as the allotment of service lands was considered more important, nothing further was done in this matter.

280. The land revenue of the Hill Tracts falls under the heads "plough cultivation, san and garjan khola rent, *jum* rent, and fisheries." The number of *san kholas* increased from 757 in 1893-94 and 751 in 1894-95 to 810 owing to the discovery of some new *kholas*, chiefly in the Chakma circle. The demand also increased from Rs. 9,096 in 1893-94 and Rs. 9,702 in 1894-95 to Rs. 12,544. The marked increase in the demand under the head "*jum* rent" was the result of the revision of the Chakma Chief's *jama*, with effect from April 1895 under Government orders. It was then raised from Rs. 6,329 in 1894-95 to Rs. 8,387.

281. No ivory was imported into or exported from the Hill Tracts. No *khedda* operations took place during the year, though there are parts of the Hill Tracts where such would be very remunerative.

282. The Assistant Commissioner supervised all the arrangements in the Hill Tracts in connection with the transport of troops, coolies, and rations for the South Lushai Hills.

283. After the receipt of the orders contained in Government letter No. 647A.D., dated 26th October 1895, many of the *sadar malguzars* endeavoured to avoid cancelment of their leases by representing their sub-tenants to be hired labourers. The rest, unable to realize rent or to obtain possession of the land, relinquished their holdings on *amalnamas* being given them, with a condition that they should retain the land personally cultivated or that the sub-tenants within their lots should surrender their holdings on the terms of the leases thus relinquished. Many petitions of relinquishments of plough cultivation holdings were put in towards the close of the year, owing to the inability of the lessees to cultivate, or to sub-let their holdings.

SOUTH LUSHAI HILLS.

284. This little known tract, with a population of less than 25,000, scattered over an area exceeding 2,000 square miles, was throughout the year under the government of Major J. Shakespear. He has severed his connection with the hills after five years' strenuous service, during which he has imposed the *Pax Britanica* on these hitherto untamed hillmen and, in the words of my predecessor, has made over his charge "thoroughly examined and accurately known, and ready for the gradual application of the internal territorial system, which alone can be a permanent basis for its future administration." The year has not been one of stirring events. An expedition in concert with the authorities of the North Lushai Hills and those of the Arakan Hill Tracts was undertaken in December and January against two Chiefs, named Kairuma and Jaduna, who had declined to comply with a request to surrender their arms. It was completely successful. Jaduna was captured, the tribes under the control of both disarmed, and British authority extended up to the Tyao river. The future of the territory demands attention. There can be no doubt that the North and South Lushai Hills should be under one administration. Pending the amalgamation, proposals have been submitted for establishing a road and telegraph line between Lungleh, the head-quarters of the South Lushai Hills, and Aijal, the capital of the northern territory. Other proposals have been submitted with a view of substituting cold-weather depôts for outlying posts, of diminishing the enormous cost of rationing our garrison, improving its efficiency, and opening up the hills by roads.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE HOWRAH BRIDGE FOR 1895-96.

No. 1777Marine.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

Dated Calcutta, the 30th October 1896.

RESOLUTION.

READ—

The Administration Report of the Howrah Bridge for 1895-96.

The following statement shows the actual receipts and expenditure of the bridge during the year under review as compared with those of the previous nine years:—

PARTICULARS.	1895-96.	1894-95.	1893-94.	1892-93.	1891-92.	1890-91.	1889-90.	1888-89.	1887-88.	1886-87.

Proportion of municipal taxes and repairs to officers' quarters, store-yard and police quarters	3,708	7,307	7,424	5,946	12,371	11,458	3,542	7,952	5,171	3,615
Miscellaneous	...	...	...	...	...	...	...	...	...	...
Proportion of establishment, &c., of steam-tug *Hetty* ..	...	...	5,073	9,592	15,097	9,423	11,074	10,560	11,062	12,231
Renewals	...	...	...	...	6,566	16,016	...	25,694	7,846	2,415
Proportion of salary of Traffic Manager.	...	...	...	...	...	...	375	4,500	4,500	...
TOTAL ...	1,36,582	1,53,611	1,40,422	1,55,675	1,67,732	1,47,066	1,41,771	2,04,241	1,52,607	1,87,021
EXCESS ...	27,576	...	14,795	6,824	...	31,958	27,055	60,475	3,07,662	4,11,235
GRAND TOTAL ...	1,64,158	1,53,611	1,55,217	1,62,499	1,67,732	1,79,024	1,68,826	2,64,716	4,60,269	5,98,256

2. The receipts during the year amounted to Rs. 1,64,158, showing an increase of Rs. 19,106 over those of the previous year. This was due to the large increase of Rs. 20,896 in the receipts from Railway traffic.

3. The expenditure amounted to Rs. 1,36,582, being less than that of the preceding year by Rs. 17,029. A reduction in expenditure is shown under all the heads except that of "the ferry steamer *Buckland*," the increase in this case being due to the charges on account of repairs during the year.

The wearing surface of the roadway, as well as the superstructure of the bridge and the pontoons, were kept in thorough repair; the iron-work was cleaned, oiled and painted, and the pontoons, fenders and sheathings kept in good order. All other work found necessary to maintain the bridge in order was carried out.

4. As in the previous years, in addition to the ordinary receipts, the following sum, which may be classed as extraordinary, was received:—

	Rs.
Interest on Government securities of Pontoon Renewal Fund ...	1,750

The corresponding expenditure under the same head was—

Sinking fund on loan	3,580

5. The cost of lighting the bridge with electricity was Rs. 12,719. As this amount is more than double the originally estimated cost of the electric lighting, the Commissioners were asked for an explanation of the high charges. They state in reply that the expenditure on repairs, coal, and stores has proved to be very much greater than was anticipated, and that it has not been found possible to reduce these items. They confidently hope, however, that, the removal of the Engines from the Armenian ghat to the Commissioners workshops on the other side of the river will result in some reduction of expenditure.

6. The bridge was opened for the passage of vessels on 148 occasions during the year, and of these openings, 104 were on the ordinary fixed days of the week and 44 on Sundays on special application. The number and description of vessels which passed through the bridge on these occasions are given in the subjoined table:—

	1895-96.	1894-95.	1893-94.	1892-93.	1891-92.	1890-91.	1889-90.	1888-89.	1887-88.	1886-87.
1	2	3	4	5	6	7	8	9	10	11
Sea-going vessels	241	282	291	309	254	414	362	380	331	295
Inland steamers and flats	1,116	1,205	1,060	1,129	1,400	1,059	941	878	899	848
Steam-tugs	677	667	549	453	366	540	491	456	397	387
Port Commissioners' vessels	38	45	161	183	66	92	53	20	46	56
Government steamers and flats	1	2	2	.....	.....	5	16	7	6	10
TOTAL ...	2,073	2,201	2,063	2,074	2,086	2,110	1,863	1,741	1,679	1,596

The number of collisions during the year was smaller than in the previous year. No sea-going vessels collided with the bridge. Out of the 78 collisions, 69 were with cargo and other boats. There were 81 collisions in 1894-95 and 78 in 1893-94.

By order of the Lieutenant-Governor of Bengal,

A. D. McARTHUR, *Col.*, R.E.,

Secretary to the Government of Bengal.

CONDITION AND PROSPECTS OF CROPS IN THE PATNA DIVISION.

NOTIFICATION—No. 1019T.R.

The 31st October 1896.—The following papers are published for general information.

M. FINUCANE,

Offg. Secretary to the Government of Bengal.

No. 579G., dated Bankipore, the 23rd October 1896.

From—J. A. BOURDILLON, Esq., C.S., Offg. Commissioner of the Patna Division,
To—The Secretary to the Government of Bengal, Revenue Department.

IN continuation of my letter No. 565G. of the 8th instant, I have the honour to forward, for the information of the Lieutenant-Governor, the following report on the state and prospects of the crops in the Patna Division during the fortnight ending the 17th instant.

GENERAL REMARKS.

2. So far as prices and the actual condition of the people go, there has been little or no change, except in part of Shahabad; but the outlook for the future is certainly more gloomy by reason of the total absence of rain.

3. Turning first to prices, I give below the rates of common rice on the 3rd, 10th, and 17th October at each of the head-quarter stations in the Division, as shown in the weekly crop reports. The figures represent the number of seers to be purchased for a rupee:—

	3rd October.	10th October.	17th October.
Patna	10½	10½	10½
Gaya	9	9½	9
Arrah	9½	9½	10½
Chapra	10	10	9¾
Motihari	11	11	11½
Muzaffarpur	9	9	9
Darbhanga	10½	10½	9

With the exception of those at Darbhanga, prices are virtually stationary; and as the Darbhanga report was issued in the absence of the Collector on tour, its accuracy may possibly be doubtful. In Arrah and Motihari there is reported to be actually a slight improvement.

4. As regards the rice crop, the total absence of the *Hathiya* and *Chitra* rains, which are absolutely necessary to keep the *kharif* crop alive in tracts not commanded by irrigation, has made its failure certain over the greater part of the Division. I have not yet received any definite forecast of the extent of failure, since every District Officer has been waiting to see whether rain would fall. Gaya, with its system of *ahars* and *pynes* in the south and east, and the Sone Canals in the north and west, is the best off, and the Collector—with, I think, too sanguine a mind—estimates the outturn all over the district at 12 annas. Parts of Shahabad benefit greatly by the canals from the Sone, but the whole of the south and west are beyond that influence. In Patna the Bihar subdivision is the most prosperous, and along the western border of the district the Sone Canals irrigate several thousand acres. In Champaran a good deal has been done by damming hill streams. In the other districts of the Division little artificial aid is available. Speaking generally, I think that throughout the Division the *kharif* crop may be taken at four annas at the outside, though if rain falls within the next few days, some good may still be done.

5. For the *rabi* crops rain is urgently required during the next fortnight to supply the needful moisture for the sowings. The mainstay of the *rabi* crop is the rain which usually falls in the *Siwati* asterism (October 22nd to November 5th), though, if good rain falls in the previous month, heavy rain in *Siwati* is not so essential. As we have had no rain either in *Hathiya* or *Chitra*, the latter of which ended yesterday, the whole fate of the *rabi*

depends on the rainfall during the next fortnight. The lands are everywhere either ready or in course of preparation, and in some places early sowings have already taken place in low lands, and it should be remembered that if we have a good *Siwati* rain, a considerable area of the lands where the rice crop has failed will be sown down in *rabi*. If we have no rain, the area usually sown down in *rabi* will be greatly contracted, and also such crops as have been and will be sown will be largely jeopardised. It is satisfactory to find that *rahar* and sugarcane promise well everywhere, but on the other hand it is feared that the want of rain will prevent these crops coming to full maturity.

6. As regards the condition of the people, there is little change, except in the south of Shahabad. Almost every District and Subdivisional Officer in the Division has been out during the past fortnight, visiting those parts of his jurisdiction where scarcity might be suspected, and police reports have come steadily in. The numerous reports I have received are unanimous in saying that so far, with the exception noted above, there are no symptoms whatever of present distress. The people are still in good case; the number of beggars has not materially increased; the children are well; cattle are in their usual condition; there are few or no complaints, and there has been no material increase of crime, but it is reported that much uneasiness exists as to the future if the *rabi* crop fails.

7. Considering the high price of grain, this statement may seem too optimistic, but I am confident that it is correct, and the reasons are twofold:—*First*, the panic caused by exportations to the North-Western Provinces, and the disturbances which succeeded them in some places, has subsided, and prices have steadied down. *Secondly*, so far there has been no lack of field work. Wherever water was to be had the lands have been assiduously irrigated, whether for the standing rice or the prospective *rabi*. Again, the preparation of the lands for the *rabi*, and in the northern districts the preparation of the fields for indigo, have afforded employment to thousands, and will continue to do so for some time still—some say till Christmas, but a more moderate estimate says till the middle of November. Towards the middle of December labourers will again be required to harvest the rice crops such as they are. *Lastly*, though grain is exported, a good deal is also coming in, and the *bhadoi* crops have come into the market.

8. To gauge the condition of the people, test works were started in the Sadar subdivision of Patna on a famine wage, but they were closed after a few days' trial, as no labourers attended. In the Bhabhua subdivision of the Shahabad district test works have just been started on the reports of the Subdivisional Officer and the District Superintendent of Police; but no report of the result has been received. Elsewhere the District Officers have found it unnecessary to adopt these measures.

9. I now turn to notice such special points as deserve mention in each district.

10. *Patna.*—About one-third of the Bihar subdivision, and the high lands on both sides of the East Indian Railway, greatly require water. Relief Committees are being provisionally organised, supported by private charity, and managed by non-officials. It is proposed that they shall purchase grain in considerable quantities, and sell it in very small quantities to the poor at a little below the market rate. The wage at the relief-works near Patna City, referred to in paragraph 8 above, was Re. 1-9 per 100 cubic feet of earth. These rates proved unattractive. Test relief-works have been started at Bihta, Mokameh, and Barh, but the result has not yet been reported. The Collector reports that there is plenty of grain in the district, and that field work is still available.

11. *Gaya.*—The Collector reports that the Nawada subdivision, through which he has been travelling, is in good condition, and that the only doubtful tract is one in the north-east of the Aurangabad subdivision, to which he will proceed at once.

12. *Shahabad.*—During the fortnight under review there have been five cases in the Bhabhua subdivision, where houses have been robbed chiefly for the sake of the grain they contained. These technical dacoities appear in all cases to have been directed against the most well-to-do man in the village, and

were probably planned by his neighbours. Mr. Ryan, the District Superintendent of Police, has just returned from a tour of inspection in that subdivision, and on his report, which has just reached me, the Collector has decided to open test works in four different places in the south and east of the subdivision. I have requested the Collector to proceed to the spot without delay, and have telegraphed to the Engineer of the East Indian Railway at Dehree to ask him to start earthwork on the Mughalserai-Gaya line as soon as possible. If the District Superintendent of Police's estimate is accurate, this tract is the worst in the Division. I will proceed there myself if need be. Considerable exports are reported from Arrah and Buxar. There has been no more tendency to grain-rioting anywhere.

13. *Saran.*—The Collector and his Subdivisional Officers have been a great deal on tour, and his conclusion, conveyed in a careful report, is that no test relief-works are yet required, and that no scarcity need be expected for a month or six weeks to come. The rice has been almost a complete failure, except in very low lands, for the rainfall deficiency in Saran on the 15th instant was 16·47 inches, or 42·6 per cent. below the average, and the district has no efficient system for the conservation of water. The worst parts of the district, therefore, are those where there is no *rabi* land. The whole district, especially the Siwan and Gopalganj subdivisions, is studded with wells, but these are chiefly for the poppy and the *rabi*.

14. Yesterday I held a conference with Mr. Buckley, Superintending Engineer, over the proposed new rules for the Saran Canals, and I hope that the rules we approved may be sanctioned and published. The opening of the canals will come too late to save the *kharif*, but they will do some good to the *rabi*; and if this is supplemented, as I anticipate, with a large number of *kutcha* wells, the Saran raiyats will do well enough, except in tracts where there is no *rabi* grown. Imports considerably exceed exports, but this is always the case, as Saran never feeds itself.

15. *Champaran.*—The Collector estimates that the *bhadoi* has been an eight or nine-anna crop, and I can certify that in some parts of the district it has been very fine. A great deal has been done in the north of the district in the way of damming hill streams and irrigating the rice from them, and the Collector is engaged in still further extending these schemes. His experience of irrigation works in the Gaya district is of great value to him in the present juncture. There is no scarcity, but, for his own satisfaction, the Collector proposes to open test works in one or two places where the *bhadoi* has failed or the rice is particularly poor. It is reported that some of the indigo-planters of the district, at a meeting held for the purpose, have decided to import a large quantity of rice from Burmah for their tenants and employés, and they are also purchasing local supplies for the same purpose.

16. *Muzaffarpur.*—From this district my information is less full than from others; but Mr. Hare is an experienced officer who knows the district well, and may be trusted to administer it to the best advantage. He too reports that there is no present distress, and he has not found it necessary to open test-works anywhere. Prices are steady, and there is plenty of grain in the district. It will be observed that both here and in Gaya prices are higher than elsewhere. I have prepared a chart of the prices in 1895, and I find that the same phenomenon occurred last year also.

17. *Darbhanga.*—During the fortnight the Collector has ridden nearly 300 miles over the greater part of the Madhubani subdivision, and has made a thorough investigation of its condition. He finds no present scarcity and recognises no need for test relief-works, but reports that, in a large tract lying along the northern border, there has been a complete failure of the rice crop, which he estimates to be no more than two or three annas for the Madhubani subdivision, while it is ten annas in the south of the district. As the area in question is solely a rice-growing tract, nothing is to be expected from a *rabi* crop there, and the Collector fears that extensive relief works will be required there towards the end of the year. Mr. Carlyle is now engaged in examining the remainder of the district.

18. *Conclusion.*—It remains to consider what is to be done in the immediate future. It will be seen from the above paragraphs that the District

Officers' reports give no reason to believe that actual scarcity now prevails or is imminent in the near future, except in Bhabhua. But it is clear that as soon as all field work ceases, and with it the daily wage of the poorer classes, they will begin to be in want. I am also keenly alive to the fact that in former famines distress has often come very suddenly, the transition from sufficiency to want taking place sometimes in a few days. Further, the opinion was expressed in your letter of the 15th instant, No. 940T.R., that if rain held off, I should certainly submit the report prescribed by section 9 of the Famine Code.

19. In these circumstances I have issued a circular to all District Officers, requesting them to submit the report required by section 10 on the 2nd proximo, or as soon after as possible, and this will be followed in due course by the fortnightly reports prescribed in sections 13 and 24 of the Famine Code.

20. I have also issued instructions on other subsidiary points as follows:—

(*a*) *The free grant of advances for kutcha wells.*—These cost from Rs. 2-8 to Rs. 3 each in most districts, and in tracts where *rabi* is grown will be most useful. In a purely rice country like parts of Madhubani, they will be useless. An application will be made through the Board for further grants when those already allotted are approaching exhaustion.

(*b*) *The revision of District Board Budgets.*—This has already been done in several districts. I have directed that all that can be diverted from the civil works' portion of the budget shall be utilised in the first instance, and that the estimated closing balance may be used up for this purpose. It should then be seen what can be saved after that from the education and medical portions of the budget, and when all that has been expended, Government must be applied to for aid.

(*c*) *The curtailment of touring establishments.*—Subdivisional Officers in particular have been directed to fix dates and places for their case-work, and to take with them as few followers as possible.

I have also drawn attention to the instructions in paragraph 2 of your letter quoted above, and am about to issue a further circular, pointing out the sections of the Famine Code which require most attention when relief-works are actually opened.

21. We may now, I think, await the submission of the first report under section 9 of the Famine Code and the development of events. My own opinion is that no real and general scarcity will be felt for some time to come; but in a few tracts, which will be defined with greater detail when the district reports are received, relief-works may be wanted during the month of November. If we have rain in *Siwati* and a fair *rabi* crop, the scarcity will not be severe; but if (as seems likely) no rain falls during the next fortnight or three weeks, a period of grave distress is in store for the people of this Division, which may continue till the *bhadoi* harvest of 1897 is gathered.

No. 1010T.R., dated Darjeeling, the 30th October 1896.

From—M FINUCANE, Esq., Offg. Secy. to the Govt. of Bengal, Revenue Dept.,
To—The Commissioner of the Patna Division.

I AM directed to acknowledge the receipt of your letter No. 579G., dated the 23rd October 1896, reporting on the condition and prospects of the crops in the Patna Division during the fortnight ending the 17th idem. You say that, speaking generally, the outturn of the winter rice crop throughout the Patna Division may, in case rain does not fall soon, be taken at four annas at the outside. If this estimate is correct, the outturn would be less than in any previous year of scarcity on record, except perhaps 1873-74. In paragraph 4 of a letter, No. 119R., dated the 29th October 1873, the Commissioner of the Patna Division wrote that there would not be an eight-anna winter rice crop in any district, and that it would be less than two annas in some. In 1888 the outturn of this crop ranged from two to ten annas, but the area in

which the outturn was from two to four annas was small in comparison with the total area of the Division, so that in the Division as a whole the outturn of the winter rice crop was much larger than four annas. The effects of the drought and consequent scarcity of 1891-92 were more acutely felt in the district of Darbhanga than elsewhere; and, although the winter rice crop on the high lands was said to be a total failure over the greater part of the district, the outturn of the crop in the Sadar and Madhubani subdivisions, which were the specially affected tracts in the district, was about five annas. In Muzaffarpur, the only other district of the Patna Division where relief operations were carried on for any length of time in 1891-92, the outturn of the winter rice crop was seven annas in the Sitamarhi subdivision and five annas and three annas in the Sadar and Hajipur subdivisions respectively, and in the Hajipur subdivision the rice crop is not important. The Lieutenant-Governor hopes that your present estimate of the outturn of the rice crop is unduly low. Should it not be so, the gloomy prospects of the rice crop, taken with the facts that the *bhadoi* harvest is short and that prices of food-grains are higher than they ever were at this time of the year, while wages of able-bodied agricultural labourers are not considerably higher now than they were 20 years ago, can hardly fail to cause most serious distress, of which, however, there are at present few indications.

2. The Lieutenant-Governor entirely approves of the instructions issued by you, as stated in paragraphs 19 and 20 of your letter, and will await the promised further report under section 9 of the Famine Code.

Jessore.—No rain. Weather warm during the day; cool at night. Prospect of *aman* gloomy Rain badly wanted. Lands being prepared for *rabi* crops. Fodder and water sufficient. No cattle-disease reported.

Khulna.—Rainfall nil. Weather dry; cool at night. *Aman* paddy in some parts withering for want of rain; in other parts there will be a good crop. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

				Srs.	
Khulna	...	...	...	9 to 10	per rupee.
Bagerhat	...	...	...	8½	
Satkhira	...	...	...	8½	

Rajshahi.—No rain. Weather seasonable. Prospects of crops comparatively fair at Nator, but gloomy elsewhere. Winter rice withering in places. Fodder and water available. Price of rice ranges between 8 and 11 seers per rupee.

Jalpaiguri.—Rainfall ·49. Weather seasonable. Steeping of jute nearly completed. Prospect of *haimanti* paddy not favourable. More rain wanted. Sowing of mustard and tobacco commenced in places. Fodder and water sufficient. Average price of common rice 8½ seers per rupee.

Darjeeling.—Rainfall at Sadar ·34, Siliguri ·10, Kurseong nil, Kalimpong ·57. Weather seasonable. Hills—*Aghani dhan*, *kalai*, and *bhutmas* coming to maturity; *bara marua* flowering; *phaphur* progressing; wheat, barley, and potatoes sown. Terai—Jute and *bhadoi dhan* in the market. Coarse rice selling:—

				Srs.	
Hills	...	...	...	5 to 7½	per rupee.
Terai	...	...	...	7½ to 8½	

Rangpur.—Rainfall nil. Jute-washing and cultivation of land for winter crops going on. Prospects of standing *aman* fair, but rain is wanted. Mustard and tobacco are being sown in places. Common rice sells at 9 to 12 seers per rupee. Fodder and water sufficient.

Bogra.—No rain. Weather clear. Foggy in the morning sometimes. Jute-washing going on. Winter rice doing well in low lands; it is suffering from drought in high lands. No cattle-disease. Fodder and water sufficient. Common rice sells at head-quarters 9 seers per rupee and in the interior from 7½ to 9½ seers per rupee.

Pabna.—Prospects of crops poor. Rain urgently wanted. Ganges very low. Fodder available. Rice selling from 8 to 9 seers per rupee.

Dacca.—Rainfall nil. Weather hot Prospects of *aman* not good. Rain much needed. Fodder available. No cattle-disease. Price of common rice 8 to 9 seers per rupee.

Mymensingh.—Rainfall nil. Mornings and evenings cool. Owing to want of rain the outturn of the *aman* crop is not likely to exceed 8 annas. Lands under preparation for spring crops. Price of common rice between 7 and 8 seers per rupee.

Faridpur.—No rain. Weather seasonable. Rain much wanted, especially for sowing of winter crops. Common rice sells from 8 to 10 seers per rupee. Fodder and water available. Cattle-disease said to prevail in Pangsha thana.

Backergunge.—Rainfall nil. Weather warm. Prospects of standing crops moderate, but suffering for want of rain. No cattle-disease. Price of common rice—*aman* 7 to 11½ seers and *aus* 9 to 14 seers per rupee.

Tippera.—No rainfall. Crops withering over an area approximating half the district, but fine in low lands. Irrigation from tanks has begun on a small scale. Prices fallen from 9 to 13 seers per rupee.

Noakhali.—Prospects of *aman* crop bad for want of rain. No cattle-disease. Fodder and water sufficient. Price of common rice 9 to 10 seers per rupee.

Chittagong.—No rain. Weather getting cool and pleasant. *Aman* suffering from drought. Prospects unsatisfactory. Water and fodder sufficient. Rice sells at 11 seers per rupee.

Chittagong Hill Tracts (Lungleh.).—Prospects of crops excellent all round save in small isolated parts.

Patna.—Rain still urgently wanted for the rice and *rabi* crops in unirrigated areas. Fodder and water for cattle sufficient, except green fodder at Bihar. Prices slightly rising but no distress. Common rice selling at Patna 9 seers per rupee. Relief measures under consideration.

Gaya.—*Kharif* paddy promises an eight-anna crop. Prospects of *rabi* fair. Common rice selling at 8¾ seers per rupee.

Shahabad.—Rain continues to hold off. *Aghani* rice dried up except in irrigated tracts. Rain most urgently wanted for *rabi* sowings. Seeds not germinating well for want of moisture. Coarse rice selling as follows :—

				Srs.	
Arrah	..	...	...	8¼	per rupee.
Buxar	...	...	...	8	
Sasaram	...	...	...	9½	
Bhabua	...	...	...	7½	

Saran.—No rain. Prospects of rice bad. Sowing of *rabi* commenced, and lands being largely irrigated. Cattle-disease has appeared in Gopalganj. Prices are—rice 9 seers, wheat 8 seers, barley 11 seers, *makai* 12 seers, gram 11 seers, *arhar* 11 seers, and *marua* 14 seers per rupee.

Champaran.—No rain. *Bhadoi* harvest over; average yield eight annas. Winter rice prospects unchanged; average outturn about 3 to 4 annas. Rain urgently required for *rabi* sowings. Relief works will be needed probably very soon in the north of Bettiah subdivision. Price of common rice unchanged at 11 seers, against average of 18 seers per rupee. Fodder and water sufficient.

Muzaffarpur.—No rain. Prospects very bad. High land rice dried up. *Rabi* sowings continue, but prospects very poor. Prices as follow:—rice 8 seers, wheat 8 seers, *makai* 12 seers, barley 13 seers, gram 10 seers, *arhar* 11½ seers, and *marua* 15 seers per rupee.

Darbhanga.—Prospect of paddy unfavourable. *Rabi* not germinating well. Price stationary.

Monghyr.—Rainfall nil. Westerly breeze during the latter part of the week. Standing crops doing well except paddy, which is withering on high lands. *Rabi* sowings continue. Rain needed. Prospects of sugarcane good. Cattle-disease reported from two villages in the Begusarai subdivision. Sufficient fodder and water. Common rice sells as follows :—

				Srs.	
Monghyr	...	...	...	8 to 9	per rupee.
Begusarai	...	...	...	8	
Jamui	...	...	...	8 to 9	

Bhagalpur.—No prospect of rain, which is needed everywhere. *Rabi* sowings not going on well and *aghani* rice suffering from want of rain. Some cases of cattle-disease in Protapganj thana and in Sadar subdivision. No want of fodder and water. Prices high. Prices of common rice as below :—

				Srs.	c.	
Sadar	...	...	...	9	0	per rupee.
Banka	...	...	..	10	0	
Madhipura	...	...	...	10	0	
Supaul	...	...	...	12	0	

Purnea.—No rain. Prospects of *aghani* paddy fair. Plants in ear, but on high lands suffering from want of rain. Sowing of *rabi* going on, but progress retarded by want of rain. No cattle-disease. Fodder and water sufficient. Prices rising. Common rice 11 seers per rupee at Sadar and Araria and 9 seers at Kishenganj.

Malda.—No rain. Weather getting cool. Winter rice on high lands in Barunda tract is dying for want of moisture. Sowing of *rabi* crops hindered by want of rain. Coarse rice selling at 8½ seers per rupee. No want of fodder and water for cattle.

Sonthal Parganas.—No rain. Weather hot in day and cool in night. Much rice on dry land withered. New rice coming into market. *Rabi* sowings short for want of moisture. Water reservoirs being depleted.

Cuttack.—Rainfall nil. Days hot; nights cool. Rain very badly wanted, though there has been slight rainfall in Pundalo and Patamundi. Both *laghu* and *guru sarad* withering for want of rain. Insect-pests still found in some places. *Rabi* crops not promising in some places. Grain dealers holding off their stocks and not bringing them to market freely. Retail prices of common rice are as follows :—

				Srs.	c.	
Cuttack	...	...	...	11	3	per rupee.
Jajpur	...	...	...	13	2	
Kendrapara	...	..	...	15	12	
Banki	...	...	...	14	7

RESOLUTION ON THE TRIENNIAL REPORT ON THE WORKING OF THE CHARITABLE DISPENSARIES IN BENGAL FOR THE YEARS 1893, 1894 AND 1895.

MUNICIPAL DEPARTMENT—MEDICAL.

Calcutta, the 9th November 1896.

RESOLUTION—No. 4146Medl.

READ—

The Triennial Report on the Working of the Charitable Dispensaries in Bengal for the years 1893, 1894 and 1895.

Read also—

The Triennial Report for the years 1890, 1891 and 1892 and the Returns for 1893 and 1894 and the Resolutions recorded upon them.

The Triennial Report was due to Government on the 1st May, but was not submitted till the 14th September 1896, or more than four months after the proper date. It is explained that the delay occurred mainly in the compilation of the notes relating to each dispensary, which cover 110 pages of small print and merely reproduce in narrative form the facts recorded in the statistical tables annexed to the report. The Lieutenant-Governor agrees with the Inspector-General in thinking that these notes need not form part of the report in future.

2. *Number of Dispensaries.*—The number of dispensaries rose from 310 in 1893 to 430 in 1895; but two of the latter were not opened, and one was closed during the year, so that the actual number was 427. These additions do not represent a real increase in the number of dispensaries, as the returns of several existing institutions, such as Lady Dufferin hospitals, cantonment hospitals, and dispensaries maintained by the Irrigation Department, by State Railways and by Wards' Estates, have for the first time been incorporated in the returns for the Province. The statement below distinguishes newly-established dispensaries from those the returns of which have only now been included in the Provincial total:—

Year.	New dispensaries opened.			Old dispensaries included.		
	Class I.	Class II.	Class III.	Class I.	Class II.	Class III.
1893 ...	...	15	1	10	...	10
1894 ...	2	9	9	10	1	13
1895 ...	...	28	2	1	2	6

The number of Class II or Local Fund Dispensaries has risen during the three years from 159 to 215, which, as the Inspector-General observes, shows a laudable desire on the part of local bodies to bring medical relief within easy reach of the people. Among local authorities the District Board of Faridpur is conspicuous for having opened five new dispensaries in 1895 and having decided to establish a dispensary at every police-station in their district. Several dispensaries nominally maintained from private resources are stated to be really managed by local bodies; and the Lieutenant-Governor agrees with the Inspector-General in thinking that these should now be formally transferred. The classification of eight dispensaries was changed, two dispensaries were closed, two were burnt down and one was removed from the Government list.

3. *Medical Officers in charge of Dispensaries.*—Of the 427 dispensaries included in the report, 229 were, during the year 1895, in charge of medical subordinates on the Government establishment, the rest being under men appointed locally. The Government medical officers included seven Military Assistant Surgeons in charge of the Dacca Mitford Hospital, the Eastern Bengal State Railway Dispensaries and the Cantonment Dispensary at Barrackpore, 70 Assistant Surgeons and 152 Civil Hospital Assistants. The Inspector-General remarks that the system under which the supporters of private and quasi-private institutions select their own medical officers, leads to the appointment of incompetent men, and suggests that Rule 9 of the Dispensary Manual should be amended so as to subject all such appointments to the approval of the Inspector-General of Civil Hospitals. The proposal should be separately submitted with an account of the specific instances upon which it is based.

4. *Inspections.*—The number of inspections made by Civil Surgeons rose from 267 in 1893 to 303 in 1894, and again to 343 in 1895. Although the number of dispensaries visited four times and over, as required by Rule 29 of the Dispensary Manual, rose from 100 in 1893 to 134 in 1894 and 141 in 1895, this represents only 39·38 per cent. of the total number of dispensaries. The distance of outlying dispensaries, and the duties of the Civil Surgeon at the jail and in the station, are put forward by some officers to excuse their failure to comply with the standing orders on this point. But the Inspector-General rightly observes that in most cases there is no reason why inspections should not be intelligently arranged by the Civil Surgeons, so as not to interfere with their other important work. The Inspector-General of Civil Hospitals inspected 17 dispensaries in 1893, 68 in 1894, and 28 in 1895. A scheme for the reorganization of the Sanitary Department is now under consideration, which will materially facilitate the inspection of dispensaries both by Civil Surgeons and by the head of the Medical Department.

5. *Management by local bodies.*—The number of dispensaries managed by local bodies was as follows during the last three years:—

	1893.	1894.	1895.
By Municipalities ...	117	118	123
„ District Boards ...	72	81	108

The Inspector-General complains of the indifference of Managing Committees to the dispensaries under their charge, of their tendency to postpone necessary improvements and to underrate the value of supervision, and contrasts the state of things prevailing in Bengal with the practice of the Central Provinces, where the medical officer receives co-operation from the Municipal Commissioners and his proposals for improvement are always carefully considered. The amendment of the Bengal Municipal Act which has recently been passed by the Legislative Council will greatly strengthen the position both of the Managing Committee and of the Civil Surgeon, and by increasing the funds available for expenditure on dispensaries will render it possible to introduce various reforms which have long been needed. The Lieutenant-Governor will be glad to consider any proposals which the Inspector-General may wish to make for amending the Dispensary Manual so as to render the control of the Civil Surgeon over all dispensaries in his district more effective than is at present the case.

6. *Patients.*—The following statement shows the number of in-door and out-door patients treated in the hospitals and dispensaries during the period under review, as compared with the statistics of the three previous years:—

Years	In-door.	Out-door	Total treated.	Population of the Province.	Ratio per cent. of total treated to population.
1	2	3	4	5	6
1893 ...	40,589	1,885,939	1,926,528	70,665,427*	2·72
1894 ...	43,824	2,241,626	2,285,450		3·23
1895 ...	45,243	2,434,536	2,479,779		3·51
Average 1893—95	43,218	2,187,367	2,230,585	70,665,427*	3·15
Average 1890—92	34,454	1,425,324	1,459,778	70,665,427*	2·06

* Including Calcutta, but excluding the Chittagong Hill Tracts.

The average attendance shows a steady increase from year to year, but, as the Inspector-General points out, the standard attained in other Provinces of Upper India has not yet been reached. The following table indicates the main points which have to be taken into account for the purpose of comparison:—

	Number of dispensaries.	Area of the Province in square miles.	Square miles per dispensary.	Population of the Province.	Population per dispensary.	Number of patients treated.	Number of patients per dispensary.
1	2	3	4	5	6	7	8
Bengal ...	427	151,543	355	70,665,427	165,493	2,479,779	5,807
Central Provinces	86	71,582	832	9,501,401	110,481	1,261,590	14,669
Punjab ...	257	110,667	431	20,860,913	81,171	3,260,617	12,687
North-Western Provinces ...	315	107,503	341	46,905,085	148,905	4,017,195	12,753

It will be seen that Bengal has more dispensaries than any of the other Provinces, that each dispensary serves an area slightly larger than in the North-Western Provinces, and considerably smaller than in the Central Provinces and the Punjab; while owing to the greater density of the population in Bengal

each dispensary has, within this area, to provide for the wants of a larger number of persons. In other words, every dispensary in Bengal has within about the same distance 16,588 potential patients more than a dispensary in the North-Western Provinces, while within a much smaller distance it has 55,012 more than a dispensary in the Central Provinces, and 84,322 more than a dispensary in the Punjab. If the Calcutta hospitals and dispensaries were included, as they well might be, though as a matter of convenience their administration is dealt with in a separate report, the statistics would be somewhat more favourable to Bengal.

Primâ facie, therefore, it might be expected that the average number of patients treated would be larger than in the other Provinces. The climate of Bengal is less healthy; there are more people to go to dispensaries; and they have, subject to the trifling exception noted above, not so far to go. In fact however, as the last column of the statement shows, the average number of patients treated at each dispensary in Bengal is less than half of the number treated in the North-Western Provinces and the Punjab, and not much more than a third of the number treated in the Central Provinces.

On this question the Inspector-General, who has himself had experience of both the Punjab and the Central Provinces, expresses the following opinion:

"One of the chief causes of low attendance in Bengal is the large number of private practitioners and druggists' shops which exist in all parts of the province. Any one with a smattering of medical knowledge, and even without it, can and does set up as a private practitioner. There is absolutely no prohibition in this respect, and I believe there is actually a so-called Medical School in Calcutta which grants medical diplomas, although it has no charter and is not even affiliated to the University or to any recognized medical institution. The result is a flood of ignorant, indigent practitioners let loose amongst a prosperous population This in itself is sufficient to account for a low attendance at the dispensaries. In other Provinces there are not so many private practitioners, and the people are poorer. Another reason why Bengal dispensaries are not as popular as they might be, is the quality of the subordinate medical officers in charge of them. There is a marked difference in this respect between the Subordinate Medical Establishment of Bengal and that of other Provinces, which no one who has had experience in other parts of India can fail to notice. In the first place there is undoubtedly a higher sense of discipline in other Provinces than seems to exist in Bengal, which probably is the root of the evil in the Lower Provinces, where, I am sorry to say, instances of malingering and other methods of shirking unpleasant duty are surprisingly common. With faults like these, subordinate medical officers can exercise little or no influence over the servants under them, and it all reacts on the attendance. Another factor in this connection is the supply of medicines, which is deficient in Bengal, as is also the attention bestowed by the medical officer on the patient. After all it is the doctor principally that makes a dispensary popular or the reverse. This is illustrated at Ranaghat, where at Mr. Monro's dispensary the daily attendance is 350, while at the Municipal dispensary it is less than 10. But how can a dispensary be popular when, as is generally the case in Bengal, the medical subordinate in charge of it closes the institution after a couple of hours' work in the morning, which he scamps, and does not put in an appearance again until the following morning. This is a common practice. And again, the supply of instruments and surgical appliances are altogether insufficient even in the larger hospitals. The beds also in most places are of the most uninviting description, and what bedding there is, is scarcely better than rags. A radical change in these respects is necessary before the Dispensary Committees can expect the people to go to hospital."

Among the causes enumerated by the Inspector-General of Civil Hospitals the first is believed to be peculiar to Bengal, where the practice of European medicine in some form or other has been long recognised as offering a ready means of livelihood to the English-educated middle class, and where, moreover, there is some reason to believe that the people generally have a special taste for cheap and specious remedies, especially if they can get them without the trouble of attending at a regular dispensary. To this may be added that, as was pointed out by Dr. Hilson in 1891, *kabirajes* and *hakims* are more numerous and have a higher reputation among the people in Bengal than in any other part of India. The discipline of the Subordinate Medical Establishment is a matter within the control of the Inspector-General himself and of the Civil Surgeons of districts. Rule 35 of the Dispensary Manual prescribes the minimum period of attendance for an officer in charge of a dispensary, and empowers the Managing Committee to extend the time. If the Inspector-General is of opinion that this rule should be amended, he should submit definite proposals on the subject. As regards the supply of medicines, surgical instruments and appliances, beds, bedding and

dispensary furniture, the minute inspection reports which have been laid before Government by the Inspector-General place it beyond a doubt that in many of the dispensaries maintained by local authorities the arrangements are so defective and the comfort of patients is so neglected as to deter people from availing themselves of these institutions except under extreme pressure. This is probably due in great measure to the peculiar provisions of the Bengal Municipal Act, which have had the effect of discouraging private liberality by merging dispensary subscriptions in the general Municipal fund, and have also hampered the action of the Commissioners by requiring all expenditure on dispensaries to be sanctioned at a special meeting. The Act as recently amended provides for a separate account being kept of dispensary income and expenditure; prohibits the diversion of these funds to any other purpose, and includes the maintenance of dispensaries among the regular duties of Municipalities. These changes in the law will now render it possible to introduce the reforms considered necessary by the Inspector-General.

7. *In-door patients.*—There has been a steady and continuous rise both in the number of in-door dispensaries and the number of in-door patients treated at them, as shown in the following figures:—

Year.	Number of dispensaries for in-door patients.	Number of in-door patients treated.
1893	163	40,589
1894	179	43,824
1895	187	45,243

The number of patients is still considerably less than it should be, for the average number of beds available during the three years under review was 2,768, while the daily average number of patients was only 1,757. The Lieutenant-Governor agrees with the Inspector-General in thinking that if the general standard of comfort were higher, and especially if suitable provision were made in the dispensaries and hospitals for the separate accommodation of patients of good castes and of their relatives attending on them, the number of in-door patients would be greater than at present. The introduction of pauper wards, like those established in the Central Provinces, in all the larger dispensaries, especially those on the main thoroughfares and on pilgrim routes, would also do much to increase the popularity of these institutions by removing objectionable patients from the ordinary wards. The attention of all Civil Surgeons and Dispensary Committees was drawn to this subject in the Resolution reviewing the Triennial Report on Dispensaries in Bengal for the years 1890 to 1892, and the Inspector-General should now proceed, in communication with Commissioners of Divisions, to arrange for the construction of such wards as funds are available. He should also consider whether in outlying dispensaries, where in-patients cannot be properly treated, the practice of receiving such patients should not be stopped and the funds thus set free expended on improving the arrangements for treating out-patients.

8. *Out-door patients.*—There was a satisfactory increase in the number of out-door patients treated at the dispensaries, the figures for the three years under review being 1,885,939 in 1893, 2,241,626 in 1894, and 2,434,536 in 1895, and the daily average attendance 13,732, 15,915, and 17,443 respectively. The number might still be greatly increased if, as observed by the Inspector-General, the arrangements for the treatment of out-door patients in Bengal were improved. Privacy in the dressing of wounds, separate waiting-rooms for females, the avoidance of delay in dispensing medicines, and regular attendance on the part of the officers and staff help greatly to attract patients, and the members of Managing Committees should bear these points in mind and assure themselves by frequent inspection that the rules are complied with. Much also depends on the personal exertions of the medical officer in charge. The increase in the number of out-patients at the Noakhali dispensary from 9,593 in 1894 to 16,196 in 1895 shows what can be done in this way and does great credit to Surgeon-Captain Grainger and Assistant Surgeon Ganga Gobind Sarkar. In dispensaries at the head-quarters of districts the Lieutenant-Governor believes that the number of out-door patients would be greatly increased if the Civil Surgeon were to visit the dispensary and see and prescribe for

all patients at certain regular hours, which should be formally notified throughout the district so that people may know when to attend. A general order will be issued on this point in consultation with the Inspector-General of Civil Hospitals.

9. *Diseases treated.*—The following statement shows the number of cases of the principal diseases treated at the dispensaries during the triennial period under review:—

Year.	Small-pox.	Cholera.	Dysentery.	Malarial fevers.	Diseases of the spleen.	Skin diseases.	Diseases of the eye and ear.
1	2	3	4	5	6	7	8
1893	91	8,077	42,607	408,043	79,848	269,385	136,524
1894	107	12,181	60,963	473,362	92,703	327,080	155,124
1895	104	11,497	59,757	525,300	101,734	358,986	173,535

Cholera, dysentery and malarial fevers were responsible as usual for the largest number of cases. Small-pox was very prevalent in 1895, owing, it is said, to the epidemic prevailing in Calcutta at that time having spread to other parts of the province. Although the admissions for cholera represent an insignificant fraction of the number suffering from the disease, it is satisfactory to find that the total number of cases treated during the last three years exceeded by 6,198 the number treated in the last triennial period. The number treated for diseases of the spleen corresponds with the increase in malarial fever, to which these diseases are due. Next to malarial fevers skin diseases contributed most largely to the number of cases treated.

10. *Surgical Operations.*—The total number of surgical operations of all sorts rose from 86,915 in 1892 to 119,776 in 1895. During the triennial period the increase has been regular, as the following figures show:—

	Major operations.	Minor operations.	Total.
1893	9,683	82,485	92,168
1894	10,912	94,366	105,278
1895	13,026	106,750	119,776
Total ...	33,621	283,601	317,222

Under recent orders of the Government of India, the distinction between major and minor operations has been abolished; but in the present report the figures have been treated as heretofore. Among Medical Officers, Surgeon-Lieutenant-Colonel R. Macrae performed the largest number (786) of major operations during the three years, amongst Military Assistant Surgeons, Mr. I. Burnett, of the Dacca Mitford Hospital, performed 944 operations; Babu Ram Kali Gupta, of Bankipore, heads the list of Civil Assistant Surgeons with 857 operations; and amongst Civil Hospital Assistants, Babu Nibaran Chandra Sen, of English Bazâr, performed 407 operations. Among the dispensaries concerned, the Dacca Mitford Hospital shows the largest number of operations (2,452), followed by Gaya (1,842), Bankipore (1,488), and Chapra (1,373) respectively. The number of operations for cataract was 2,221 in 1893, 2,323 in 1894, and 2,727 in 1895. Although the number of operations is still much smaller than in the North-Western Provinces and the Punjab, still the increase is remarkable as compared with the figures of 1889, when only 926 operations were performed, and tends, so far as it goes, to bear out the opinions expressed by the present Inspector-General and by some of his predecessors, that cataract is as common in Bengal as in other parts of India. The number of minor operations increased from 82,485 in 1893, to 94,366 in 1894, and 106,750 in 1895.

11. *Sex of patients.*—The statement below shows the sexes of patients treated during the triennial period:—

	Men.	Women.	Children.	Total.
1893 ...	1,118,591	299,187	508,750	1,926,528
1894 ...	1,329,065	362,632	593,813	2,285,450
1895 ...	1,453,786	398,994	626,999	2,479,779

The increase in the number of female patients is satisfactory, and the Lieutenant-Governor believes that a much larger increase may be looked for if

special arrangements are made for their accommodation. The proposal made by the Inspector-General for the modification of Statement IV, showing the class of patients treated in dispensaries, should be submitted separately for the consideration of Government.

12. *Income and Expenditure.*—The following table compares the income and expenditure of the dispensaries for the last three years:—

	1893.	1894.	1895.
1	2	3	4
Income.	Rs. A. P.	Rs. A. P.	Rs. A. P.

The difference between the opening balance of each year and the closing balance of the previous year is due partly to mistakes in the accounts submitted by Civil Surgeons, and partly to the opening or closing of dispensaries and the inclusion of existing dispensaries in the official returns. The income increased by Rs. 66,038-5-2 in 1893, Rs. 1,05,288-2-10 in 1894, and by Rs. 57,223-15-9 in 1895. The contributions from Government rose in 1893 and 1894, and again declined in 1895. Most of the increase in

1893 and 1894 occurred under salaries and was mainly due to the incorporation in the Provincial returns of the accounts of institutions in Class I which had not been brought on the Government list. The increase in 1894 under the head of special allowances given by Government was due to a grant of Rs. 6,600 to the Samastipur Dispensary for the construction of a building. The total income from local funds increased from Rs. 1,44,300-5 in 1894 to Rs. 1,80,619-2-7 in 1895, while the income from Municipal funds decreased from Rs. 2,04,464-7-5 to Rs. 1,89,153-7-6. Subscriptions from Europeans and Natives increased from Rs. 16,155-12-11 and Rs. 1,25,170-12-5 in 1892 to Rs. 21,202-6-3 and Rs. 2,02,786-11-4 in 1895, respectively. The increase in subscriptions has however not kept pace with the increase in the number of dispensaries, and there is reason to believe that the transfer of dispensaries to the control of local authorities, and the incorporation of their income in the general income of these bodies, has had the effect of actually reducing their receipts from private liberality. Thus in 1881 the income derived from subscriptions amounted on an average to Rs. 626 per dispensary, while in 1895 the average income from subscriptions of Municipal dispensaries was only Rs. 276, and that of dispensaries under District Boards only Rs. 166.

The total expenditure, excluding the sums invested, shows an increase from year to year. In 1893 the amount was Rs. 5,86,365-11-10, in 1894 Rs. 6,96,101-9-11, and in 1895 Rs. 7,50,911-12-8. The figures for the previous years were Rs. 4,74,853-15-6 in 1890, Rs. 4,78,441-4-7 in 1891, and Rs. 5,23,544-9-8 in 1892. In 1894 the expenditure on establishment rose for the reason mentioned above. Under the head of Diet there was an increase of Rs. 4,774-14-10 in 1893, of Rs. 1,688-1-1 in 1894, and of Rs. 340-9-10 in 1895. In paragraph 10 of the Resolution on the returns for 1894, the Lieutenant-Governor observed that the average cost per patient had declined from Rs. 39-7-2 to Rs. 38-9-11, and the Inspector-General was asked to ascertain whether undue economy in the matter of diet was not one of the causes which detract from the popularity of the dispensaries. The Inspector-General reports that this is not the case, and that the cost varies in different places according to the price of food-grains.

The cost of European medicines in 1893 was Rs. 80,940-7-3, in 1894 Rs. 1,08,070-0-5, and in 1895 Rs. 1,13,703-2-10. As was observed in the Resolution on the returns for 1893, it is expected that the expenditure on this head will in future show a decrease, if all the dispensaries in the province follow the system introduced in April 1894, of obtaining annually from Messrs. Burgoyne, Burbridge and Company of London, at wholesale prices, such drugs, instruments and medical necessaries as cannot be better obtained in India, tinctures and other alcoholic preparations being procured fom a leading firm of druggists in Calcutta. It is reported that in 1895 only 194 dispensaries had adopted this plan. It is clearly desirable that the practice of all dispensaries should be uniform, and as soon as the report on the subject promised by the Inspector-General is received the Lieutenant-Governor will be prepared to add a rule on the subject to the Dispensary Manual.

The total sums invested during the triennial period were Rs. 11,12,053-10-1 in 1893, Rs. 11,17,831-11-7 in 1894, and Rs. 11,80,243-6 in 1895, and the value of the securities sold or withdrawn was Rs. 18,535-1-7, Rs. 23,449-7-7, and Rs. 24,106-1-3, respectively.

13. During the greater part of the year 1893 the office of Inspector-General of Civil Hospitals was held by Surgeon-Colonel J. G. Pilcher. Surgeon-Colonel J. H. Newman officiated as Inspector-General for a period of four months in 1893, during the absence on leave of Dr. Pilcher. In November 1893, Surgeon-Colonel R. Harvey took over charge of the office, and on his vacating it in March 1895, Surgeon-Colonel Ross was appointed Inspector-General. The thanks of the Lieutenant-Governor are due to Dr. Ross for the keen interest that he has taken in the details of dispensary administration, and for his efforts to render these institutions more attractive to the people whose needs they are intended to serve. Sir A. Mackenzie trusts that Municipalities and Districts Boards will recognise their obligations in this respect and will cordially co-operate with the Inspector-General in introducing the improvements which he recommends.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Government of Bengal.

WEATHER AND CROP REPORT.

For the week ending the 9th November, 1896.

Burdwan.—Rainfall nil. Weather hot and fair. Standing crops suffering for want of rain throughout the district. Cultivation of *rabi* also retarded. Sugarcane doing well. Fodder and water sufficient. Condition of cattle good. Common rice selling as follows:—

				Srs.	
Sadar	...	...	...	10 to 12	per rupee
Kalna	...	...	..	9½ to 10	
Katwa	...	...		11	
Raniganj	...	...	...	9 to 10	

Birbhum.—No rain. Crops withering except on low lands. Rice selling at 9 to 9½ seers per rupee.

Bankura.—No rain. Hot days with cool nights and mornings. *Aman* paddy on high lands becoming worse day by day. Withering paddy plants are used as fodder in places. Cultivation of *rabi* is stopped where artificial irrigation is not possible. Fodder and water sufficient at present. Cow-pox still reported from Gangajalghati and Onda. Common rice selling at Bankura 11 seers and Vishnupur 12 seers per rupee.

Midnapore.—No rain during the week. Winter is setting in. *Aman* paddy is withering in some places for want of rain. Cattle are said to have been let out to graze on the paddy crops in some places in Garhbeta thana. Sugarcane and indigo doing badly. *Rabi* crops are being sown in some places. Cattle-disease reported from Naraingarh and Salboni police-stations. Fodder and water sufficient. Common rice selling as follows:—

				Srs.	
Sadar	...	...	...	9½	per rupee.
Contai	...		...	12 to 13	
Tamluk	...	...	..	10	
Ghatal	...	...	..	10	

Hooghly.—No rain throughout the district. *Aman* is withering in places. Rain required urgently. *Rabi* cultivation going on. Common rice sells from 8 to 11 seers per rupee. Estimated outturn of winter rice—Serampore and Uluberia 7 annas, Jahanabad 9 annas, Howrah 11 annas, and Sadar 6 annas—District average, 8 annas.

Howrah.—Rainfall nil. Weather seasonable. Harvesting of jute and sowing of *rabi* almost over. Rain badly wanted for *aman* rice. Fodder and water sufficient. Common rice sells from 8½ to 10 seers per rupee.

24-Parganas.—Rainfall at Sadar nil, at Basirhat ·35 fell on 4th instant. Hot sun during day, cool at night. Rain in Basirhat has done some good. Estimate of winter rice 10 annas in the south and 8 annas in the northern half of the district. Sugarcane poor. *Rabi* sowings failing generally for want of moisture, except where lands can be irrigated for sugarcane and tobacco. A large flight of locusts was observed in North Barasat, but no injury done. Fodder and water-supply for cattle sufficient. Prices abnormally high in the interior owing to want of grain stocks, and have risen slightly during the week. Common rice selling as follows:—

				Srs.	c.	
Sadar	...	...	...	9 to 11	0	per rupee.
Barasat	...	...	...	8	8	
Basirhat	...	...	...	9	0	
Diamond Harbour	...	...	...	9	10	

Nadia.—**Rainfall** nil. Days hot; nights and mornings cool. *Aman* crop is withering. Prospects of *rabi* crops not favourable owing to continued drought. Common rice selling as follows:—

				Srs.	
Sadar	...	...	...	9 to 10	per rupee.
Kushtia	...	...	...	9	
Ranaghat	...	...	...	9	
Meherpur	...	...	...	10½	

Murshidabad.—Rainfall nil. Weather seasonable. Sowing of *rabi* continues. *Kalai* suffering for want of rain. Prospect of *aman* not favourable. Indigo and mulberry promising well. Rain much wanted for all standing crops. Fodder and water sufficient. Common rice sells as follows :—

		Srs.	c.	
Sadar	...	9	0	per rupee.
Kandi	...	10	12	
Jangipur	...	9	0	

Jessore.—Weather warm during the day; cool at night. Prospect of *aman* bad Rain badly wanted. No rain fell in any of the subdivisions except in Magura, where ·12 rainfall reported. Lands continue to be prepared for *rabi* crops. Fodder and water sufficient. No cattle-disease reported. Insects have appeared here and there in the Narail subdivision.

Khulna.—Rainfall at Khulna ·05. Weather fine and cool. *Aman* paddy suffering everywhere from want of rain. In south of Satkhira there will be practically no crop. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Khulna ...	7 to 9	per rupee.
Bagerhat ...	8½	
Satkhira ...	8	

Rajshahi.—No rain. Weather seasonable. Prospects of standing crops fair at Nator, but gloomy elsewhere. Sowing of *rabi* crops going on, but retarded for want of rain. No cattle-disease. Fodder and water sufficient. Common rice selling from 7½ to 10 seers per rupee.

Dinajpur.—Rainfall nil. Weather seasonable. Standing crops on low lands doing well; those on high lands suffering for want of rain. Lands are being prepared for *rabi* crops. No cattle-disease. Fodder and water sufficient. Common rice selling from 8 to 9½ seers per rupee.

Jalpaiguri.—Rainfall nil. Weather seasonable. Steeping of jute nearly finished. Standing *haimanti* paddy needs moisture. Sowing of mustard, tobacco, and pulses going on. Fodder and water sufficient. Average price of common rice 8¼ seers per rupee.

Darjeeling.—Rainfall nil. Weather seasonable. Hills—wheat, barley, and *aghani dhan* coming up; *bara marua* will soon be harvested; *phaphur* flowering; *kalai* progressing favourably. Terai—*Aghani dhan* ripening; prospects not good; *kalai* good. Coarse rice selling :—

	Srs.	
Hills ...	5½ to 7	per rupee.
Terai ...	7 to 8	

Rangpur.—No rain. Jute-washing and cultivation of land for winter crops going on. Prospects of standing *aman* fair, but rain is wanted. Mustard and tobacco are being sown. Fodder and water sufficient. Common rice selling at 10 to 12 seers per rupee.

Bogra.—No rain. Weather clear; cloudy sometimes. Winter rice doing well in low lands; it is suffering from drought on high lands. No cattle-disease. Fodder and water sufficient. Common rice sells at head-quarters 9 seers per rupee, and in the interior from 7½ to 10½ seers per rupee.

Pabna.—Rainfall nil. Harvesting of *aman* paddy commenced; 4 to 6 annas' crop expected Rain required for *rabi* crops. Rice selling at 8 to 8½ seers per rupee. Fodder sufficient. Good water becoming scarce.

Dacca.—Rainfall ·17. Weather seasonable. Prospects of standing *aman* crop poor. Fodder available No cattle-disease. Common rice sells at 8 to 9 seers per rupee.

Mymensingh.—Rainfall nil. Cool mornings and evenings. Lands under preparation for *rabi*. Prospects unaltered. Outturn of *aman* crop not likely to exceed 8 annas. Price of common rice 7 to 8 seers per rupee.

Faridpur.—Slight rain at Sadar. Weather seasonable. No improvement in prospects of crops. The estimated outturn of the winter paddy crop is 8 annas. Common rice sells from 8 to 10 seers per rupee.

Backergunge.—Rainfall nil. Weather seasonable. Prospects of standing crops moderate, but suffering for want of rain. Cattle-disease reported from some places. Price of common rice (*aman*) varies from 7 to 10 seers per rupee and (*aus*) from 8 to 13 seers per rupee.

Tippera.—No rain since last report, nor improvement in crop prospects. Prices rising slowly, ranging from 8 to 10 seers per rupee. No fear of scarcity yet.

Noakhali.—Prospects of *aman* bad for want of rain. Sowing of *rabi* crops commenced. No cattle-disease. Fodder and water sufficient. Common rice sells from 9 to 10 seers per rupee.

Chittagong.—Rainfall nil. Weather dry and still warm. Paddy plants suffering from drought. Prospects not favourable. Water and fodder sufficient. Rice sells at 10 seers per rupee. Prices show a tendency to rise.

Chittagong Hill Tracts (Lungleh).—Prospects of crops excellent.

Patna.—Rain still urgently wanted for both rice and *rabi* crops in unirrigated areas. *Rabi* seeds germinating and doing so far well. Slight damage by locusts in some villages in Bihar thana. Prices show some improvements. Common rice selling at 10½ seers per rupee in Patna to-day (9th instant). Fodder and water for cattle sufficient.

Gaya.—*Kharif* paddy promises an eight-anna crop. Prospects of *rabi* fair. Price of common rice 8 seers per rupee.

Shahabad.—Weather slightly cloudy. Rice crop in unirrigated tracts nearly all dried up. Except in irrigated parts, *rabi* seeds not germinating well for want of moisture. Common rice selling at 8 to 9 seers per rupee.

Saran.—No rain. Prospects of rice crop bad. Sowings of *rabi* proceeding and crop germinating well, lands being largely irrigated. Sugarcane good. Canals open and doing much good. Cattle-disease prevalent in parts of Gopalganj. Fodder sufficient. Prices are—common rice 9 seers, wheat 8 seers, barley 11 seers, *makai* 12 seers, gram 10 seers, *arhar* 11 seers, and *marua* 14 seers per rupee.

Champaran.—No rain. *Rabi* sowings seriously retarded and drying up in many places. Lands being prepared against rain. No change in rice prospects; average outturn expected to be about 3 to 4 annas. Price of common rice risen from 11 to 10 seers per rupee, against average of 18 seers. Fodder and water sufficient. Test works opened in north of Bettiah subdivision; result not yet known.

Muzaffarpur.—No rain. Prospects continue very bad. Rice on high lands dried up and being used as fodder. *Rabi* prospects also poor. Prices are—common rice 8 seers, wheat 8 seers, *makai* 12 seers, barley 12 seers, gram 10 seers, *arhar* 12 seers, and *marua* 15 seers per rupee.

Darbhanga.—Paddy attaining maturity on low lands; that on high lands dried up. Prospects of *rabi* gloomy. *Rahar* excellent. Common rice selling at 11 seers per rupee

Monghyr.—No rain. Weather seasonable. Paddy being cut. *Rabi* being sown. Prospects rather gloomy. Cattle-disease reported from two villages in Begusarai. No want of fodder and water. Common rice sells as follows:—

	Srs.	
Monghyr	8 to 9	per rupee.
Begusarai	10½	
Jamui	8 to 9	

Bhagalpur.—Weather seasonable. *Rabi* sowings about finished. Want of moisture in the soil preventing free germination, and insects have done much harm. *Aghani* crops, except in low lands, not doing well. Cattle-disease in Pratapganj and in Sadar. No want of fodder and water. Prices of common rice as below:—

	Srs.	c.	
Sadar	10	0	per rupee.
Banka	10	0	
Supaul	11	0	

Purnea.—No rain. Prospects of *aghani* paddy on low lands fair, but on high lands the plants are suffering from drought, and will give a poor outturn. Sowing of *rabi* going on still. No cattle-disease. Fodder and water sufficient. Common rice 10 seers per rupee at Sadar, 9 seers at Kishanganj, and 11 seers at Araria.

Malda.—No rain. Weather seasonable. Prospect of winter rice very bad; outturn expected to be 4 to 6 annas. Sowing of *rabi* crops not yet finished for want of moisture. Coarse rice selling at 9½ to 11 seers per rupee. No want of fodder or water for cattle.

Sonthal Parganas.—No rain. Sky clear. Cool in morning and evening; hot in day. The weather has been cloudy with variable winds. Prospects of rice crop and *rabi* not improved.

Cuttack.—Rainfall nil. Weather occasionally cloudy; unseasonably hot *Laghu* and *guru sarad* and *rabi* crops withering for want of rain in unirrigated tracts In some places *laghu* being harvested. Condition of cattle fair. Fodder not sufficient in some places. Insects gradually disappearing. Rice is not easily available everywhere. Common rice selling at the following rates :—

		Srs.	c.	
Cuttack	11	13	per rupee.
Kendrapara	14	7	
Jajpur	11	3	
Bonki ... (average)	15	1	

Bâlasore.—Days hot; nights cool. Sky cloudy from time to time. Rain badly wanted. Winter rice in ears withering on high lands. Late *sarad* will be more or less a total failure except where it is irrigated Want of rain retarding *rabi* sowings. Fodder and water sufficient. Common rice selling at 11 and 13 seers per rupee at Sadar and Bhadrak respectively.

Angul.—No rain. Weather hot and dry. *Laghu* being reaped. Other crop prospects as reported last week. Coarse rice selling at 10 seers per rupee at Angul and 18 seers in the Khondmals.

Puri.—Weather still warm. Prospects of winter rice and *rabi* crops somewhat improved by light and partial showers of rain. Fodder sufficient. Condition of cattle good. Price of common rice 12 to 16 seers per rupee

Lohardaga.—Days hot; nights cool. Reaping of *don dhan* commenced. Rice sells at 9 to 10 seers per rupee. Fodder and water sufficient. No cattle-disease reported.

Palamau.—No rain. *Rabi* is being grown in few places. What is left of winter rice is being reaped. No cattle-disease. Water and fodder sufficient. Coarse rice selling at about 8 seers per rupee.

Manbhum.—No rain. Weather seasonable. Prospects of the crops on the ground much the same as last week. Dried up rice on higher lands is being cut for fodder. Cattle-disease still prevalent in some villages about Raghunathpur and Gourangdi thanas. Fodder ample. Drinking-water sufficient at present. Common rice sells at Sadar 10 seers per rupee. Gobindpur report not received. Stocks of food-grains appear not to be large at present. Supply sufficient.

Singhbhum.—Rain will not benefit *dhan* now, but is needed for the little *rabi* there is. Total outturn of *dhan* nine annas. Price of old rice varies from 10 to 12 seers per rupee; new rice a seer cheaper.

General Summary.—With the exception of showers at Basirhat (24-Parganas), Magura (Jessore), Khulna, Dacca, Faridpur, and Puri, there was no rain in the Province during the week. The general agricultural prospects continue unfavourable The winter rice, except in low or irrigated tracts, is withering In some districts, it is reported, cattle are being turned into the drying rice-plants to graze. The *rabi* sowings are generally retarded for want of moisture; but where irrigation is available, the sowings are progressing and are so far doing well. In Cuttack the insects which had been infesting the rice-plants are gradually disappearing. Locusts have appeared in places in the 24-Parganas and Patna, but have done little or no damage. No cattle-disease is reported except from a few places in Bankura, Midnapore, Backergunge, Saran, Monghyr, Bhagalpur, and Manbhum. Prices are abnormally high and are still rising in many districts, but at Patna the price of common rice is reported to have fallen from 9 to 10½ seers a rupee.

By order of the Lieutenant-Governor of Bengal,

U. In the Brahmanbaria and Chandpur subdivisions the retail price of salt is 8 seers per rupee.
V. At Feni Hat the retail price of salt is 7 seers per rupee.
W. At Cox's Bazar the retail price of salt is 10 seers per rupee.
X. In the subdivisions the retail prices of salt per rupee are :—Barh 10½ seers, Bihar 9¾ seers, and Dinapore 9¾ seers.
Y. In the subdivisions the retail prices of salt per rupee are :—Jahanabad 9½ seers, Aurangabad 9 seers, and Nawada 9 seers.
Z. In the subdivisions the retail prices of salt per rupee are :—Buxar 10½ seers, Bhabhua 10 seers, and Sasaram 10¼ seers.
a. In the subdivisions the retail prices of salt per rupee are :—Siwan 11 seers 10 chittaks, and Gopalganj 11 seers 12 chittaks.
b. At Bettiah the retail price of salt is 10 seers per rupee.
c. In the subdivisions the retail prices of salt per rupee are :—Hajipur 9½ seers and Sitamarhi 11 seers.
d. In the Samastipur and Madhubani subdivisions the retail price of salt is 11 seers per rupee.

M. FINUCANE,

Offg. Secretary to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of October 1896.

	Inches.	Date.	Hour.
The mean pressure of the month	29·876		
The average pressure of October from 24 years' registers ...	29·832		
The highest pressure in the month	30 050	26th	10
The lowest pressure in the month	29·654	6th	16
The range of pressure	0·396		
	Hours.		
The total number of hours of bright sunshine during the month	299·3		
The maximum possible number of hours of sunshine ...	359·1		
	⊖		
The mean temperature of the month	80·5		
The average temperature of October from 24 years' registers	81·5		
The highest temperature in the month	91·7	5th	
The lowest temperature in the month	69·4	21st	
The range of temperature during the month	22·3		
The mean daily range of temperature	15·8		
The greatest range of temperature in one day	19·4	19th	
	Per cent.		
The mean humidity of the month	80		
The average humidity of October from 24 years' registers ...	79		
	Inches.		
The mean vapour tension of the month	0·819		
The average vapour tension of October from 9 years' registers ...	0·854		
The mean cloud proportion of the month	0·80		
The average cloud proportion of October from 19 years' registers	3·84		
The total rainfall of the month	Nil		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	Nil		
The average fall of October from 48 years' registers ...	5·61		
The greatest fall in 24 hours	Nil		
	Days.		
The number of rainy days in the month	Nil		
The average number of rainy days in October from 24 years' registers	10		
	⊖		
The mean maximum equilibrium temperature of solar radiation during the month	144·3		
The mean difference of sun and air temperatures	55·5		
The greatest sun temperature	151·2	1st	
The greatest excess of sun over air temperature	61·9	14th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	66·9		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	6·2		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	8·2	20th	
	Miles.		
The mean movement of the wind per day	64·5		
The greatest movement of the wind in one day	131·0	30th	
The greatest movement of the wind in one hour	12·0	27th, 10 to 11 A.M. and 30th 10 to 11 A.M.	

The number of hours with winds from each of the 8 points—
N. 24, N.E. 0, E. 12, S.E. 3, S. 21, S.W. 333, W. 166, N.W. 110, Calm 75.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·8°; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,

For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 9th November 1896.

Abstract of the Results of the Barometric and Thermometric Observations taken at 10 a.m. at the Meteorological Office, Chowringhee, in the month of October 1896.

The mean pressure of the seven days	29·945
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·920
	Hours.
The total number of hours of bright sunshine	61·9
The maximum possible number of hours of sunshine	78·5
	°
The mean temperature of the seven days	77·6
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	78·2
The extreme variation of temperature	25·3
The maximum temperature	89·7
	Miles.
The highest velocity of the wind in one hour	10
	%
The mean relative humidity	74
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	74
	Inches.
The total fall of rain from 1st to 7th November 1896	Nil.
The average fall of the corresponding period for 24 years, Surveyor-General's Office	0·27
The total fall from 1st January to 7th November 1896	53·17
The average fall of the corresponding period for 24 years, Surveyor-General's Office	64·74

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed, open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official Tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

≏ dew; ≡ fog.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,
Calcutta, the 9th November 1896.

J. H. GILLILAND,

WEATHER AND CROP REPORT.

For the week ending the 16th November, 1896.

Burdwan.—Rainfall nil. Weather hot and fair. Prospects of *aman* crop not favourable for want of rain throughout the district. Sowing of *rabi* retarded. Fodder and water sufficient. Condition of cattle good. Common rice selling as follows:—

		Srs.	
Sadar		9 to 12	per rupee.
Kalna		9½ to 10	
Katwa		11	
Raniganj		10	

Birbhum.—No rain. Harvesting of *aus* completed; outturn 6 to 8 annas. *Aman* withering except on low lands. Rice selling at 9½ to 10 seers per rupee.

Bankura.—No rain. Cold weather has set in. State of *aman* paddy continues bad. Prospects of *rabi* also gloomy. Fodder and water sufficient for the present. Cow-pox still reported from Gangajalghati. Common rice selling at 12 seers per rupee both at Bankura and Vishnupur.

Midnapore.—No rain. Weather seasonable. Paddy crops on high lands of Contai and Ghatal are withering. In Sadar considerable damage done to high lands, especially in the north-west. The standing crops are ripening fast and are being cut in places. Sugarcane

and indigo doing fairly well. *Rabi* crops are still being sown and are germinating fairly. Cattle-disease reported from Naraingarh, Binpur, and Garhbeta police-stations. Fodder and water sufficient. Common rice selling as follows:—

		Srs.	
Sadar	9		
Contai	12 to 13		per rupee.
Tamluk	9		
Ghatal	10		

Hooghly.—No rain throughout the district. *Aman* is withering in places. Rain required urgently. *Rabi* cultivation going on. Common rice sells from 8 to 11 seers per rupee.

Howrah.—Rainfall nil. Weather seasonable. Harvesting of jute and sowing of *rabi* almost over. Cutting of *aman* rice on high lands commenced. Rain badly wanted for *aman* rice. Fodder and water sufficient. Common rice sells from 8½ to 10 seers per rupee.

24-Parganas.—Rainfall nil. Weather hot in the day and cool at night. In south of the district winter rice is estimated to yield 10 to 12 annas; elsewhere 8 annas. *Rabi* sowings progressing slowly owing to want of rain. No cattle-disease. Fodder and water-supply sufficient. Common rice sells as follows:—

	Srs.	c.	
Sadar	8½ to 11	0	
Barasat	8	8	per rupee.
Basirhat	9	0	
Diamond Harbour	9	10	

Nadia.—No rain. *Aman* paddy suffering everywhere for want of rain. Estimate of winter rice only 2½ annas in the district. Prospects of *rabi* crops bad. Fodder sufficient. Water-supply diminishing daily. Common rice sells as follows:—

	Srs.	
Sadar	9 to 10¾	
Kushtia	9	per rupee.
Ranaghat	9½	
Meherpur	8 to 9	

Murshidabad.—Rainfall nil. Weather seasonable. Prospect of *kalai* is not good. *Rabi* crops suffering and sowing retarded for want of rain. *Aman* withering in some places. State of sugarcane, indigo, and mulberry seems good. Fodder sufficient. Common rice sells as follows:—

	Srs.	
Sadar	10	
Kandi	10	per rupee.
Jangipur	9	

Jessore.—Rainfall nil. Weather hot during day; cool at night. Prospect of *aman* is gloomy except in the low *beels* of Narail. Fodder and water sufficient. No cattle-disease reported except from thana Magura. Common rice sells as follows:—

	Srs.	
Sadar	8 to 9	
Jhenida	9	
Magura	8½	per rupee.
Narail	9	
Bongaon	8½	

Khulna.—Rainfall nil. Weather fine and cool. *Aman* paddy and other crops suffering from want of rain. In south-west of the district there will be a total failure of *aman* paddy, the only crop grown there. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Khulna	7 to 9	
Bagerhat	8	per rupee.
Satkhira	8	

Rajshahi.—Rainfall at Naugaon ·18; no rain elsewhere. Prospects of standing crops not good Estimated outturn of winter rice—Sadar 4 annas, Nator 5 annas, Naugaon 8 annas. Sowing of *rabi* crops still continues. No cattle-disease. Fodder and water sufficient. Common rice sells from 7 to 10 seers per rupee.

Dinajpur.—Average rainfall ·15. Standing crops on low lands doing well; those on high lands suffering for want of rain. Lands are being prepared for *rabi* crops No cattle-disease. No complaint of fodder and drinking-water. Common rice selling at 8 to 9½ seers a rupee.

Jalpaiguri.—Rainfall ·01. Weather seasonable. Prospect of *haimanti* paddy is not favourable for want of rain. Sowing of *rabi* crops going on. Fodder and water sufficient. Average price of common rice 8½ seers per rupee.

Darjeeling.—Rainfall at Sadar ·31, Kurseong ·60, Siliguri, ·09 Kalimpong ·28 Weather seasonable. Hills—*aghani dhan*, *bara marua*, *kalai*, and *bhutmas* being harvested; *phaphur* and *tori* flowering; wheat and barley coming up. Terai—*Aghani dhan* coming to maturity; mustard, *kalai*, and potatoes being sown. Coarse rice selling as follows:—

				Srs.	
Hills	...	...	...	5½ to 8	per rupee.
Terai	...	...	...	7 to 8	

Rangpur.—Average rainfall ·11. Sowing of winter crops continues. *Aman* is in ears in places. The hail-storm which occurred on the 13th is reported to have done some damage to crops in the southern portion of the Gaibanda subdivision. Prospects otherwise fair. Fodder and water sufficient. Common rice selling at 8 to 10½ seers per rupee.

Bogra.—Hail-storm in thana Khetlal on 13th instant. Rainfall ·20. Reaping of winter rice has commenced. Expected outturn 12 annas all round. *Rabi* sowings in progress. No cattle-disease. Fodder and water sufficient. Price of common rice (new) at head-quarters 9¾ seers per rupee.

Pabna.—Rainfall nil. Weather cooler. *Rabi* crops are withering. Winter rice is being harvested. Prospects are gloomy. Wells and tanks are drying up. Fodder available. Rice at Pabna selling at 9½ seers and at Sirajganj at 7½ seers per rupee.

Dacca.—Rainfall nil. Weather hot. Prospects of standing *aman* crop gloomy. Fodder available. No cattle-disease. Common rice sells at 8 to 9 seers per rupee.

Mymensingh.—Rainfall nil. Mornings and evenings cool. *Rabi* crops are being sown Sugarcane being pressed. Rain wanted. Probable outturn of *aman* 8 annas. Price of common rice 7 to 8 seers per rupee.

Faridpur.—No rain. Weather hot in the day; cool at night. Prospects of crops unfavourable. Land is being prepared for winter crops. Common rice sells from 8 to 8½ seers per rupee. Considerable quantities are being imported into Goalundo subdivision.

Backergunge.—Rainfall nil. Mornings and evenings cool. Prospects of standing crops poor on high lands and average on low lands. No cattle-disease. Price of common rice (*aman*) ranges from 6½ to 9 seers and (*aus*) from 8 to 11 seers per rupee.

Tippera.—About half-an-inch of rain fell in Brahmanbaria subdivision; no rain anywhere else. Paddy on high lands withering. Prices rising slowly. Rice sells from 8 to 10 seers per rupee. No fear of scarcity yet.

Noakhali.—Prospects of *aman* crop bad for want of rain. No cattle-disease. Fodder and water sufficient. Price of common rice from 9 to 10 seers per rupee.

Chittagong.—No rain. Weather dry and still warm. Paddy plants suffering from unusual drought. Prospects unfavourable. Water and fodder sufficient. Sporadic cattle-disease reported. Rice selling from 8 to 10 seers per rupee.

Patna.—Paddy ripening. *Rabi* has germinated well. Opium seedlings doing well. Rain urgently wanted for *rabi* crops. Damage by locusts previously reported insignificant. Prices beginning to rise again, exportation having recommenced. Common rice selling at Patna 10 seers per rupee. Test works have been opened, but are not largely attended. Fodder and water for cattle sufficient.

Gaya.—*Kharif* paddy promises an eight-anna outturn. Most of *rabi* lands sown. Prospects very fair.

Saran.—No rain. *Rabi* sowings far advanced and crop germinating well. Sowing of poppy begun. No further reports of cattle-disease received. Fodder sufficient except in Gopalganj. Locusts have done considerable damage in twenty villages in Sadar subdivision. Prices are—common rice 9 seers, wheat 8½ seers, barley 11½ seers, *makai* 12½ seers, gram 11 seers, *arhar* 11½ seers, and *marua* 15 seers per rupee.

Champaran.—No rain. Prospects unchanged. *Rabi* sowings making little progress. Prices risen. Common rice sells at 9 seers per rupee, against 10 seers (last week) and average 17¼ seers. Fodder and water sufficient. Two test works opened in north of Bettiah subdivision. Number employed on Saturday (14th)—Men, 705; Women, 441; Children, 268. Gratuitous relief nil.

Darbhanga.—Rain urgently wanted for *rabi* and tobacco. Paddy attaining maturity. *Rahar* doing well at present.

Monghyr.—Rainfall nil. Weather seasonable. Prospects of sugarcane good. *Rabi* sowings in some places over. Rain needed for *rabi*. Cattle-disease reported from interior of Begusarai. Fodder and water sufficient. Prices of common rice:—

	Srs.	
Sadar	8 to 9	per rupee.
Begusarai	10	
Jamui	8 to 9	

Bhagalpur.—Rainfall nil. Weather seasonable. *Rabi* sowings nearly finished. *Aghani* harvesting has commenced. No want of fodder and water. Some cases of cattle-disease in Banka and Kotoria and in Sadar subdivision. Common rice sells as below:—

	Srs.	c.	
Sadar	10	0	per rupee.
Banka	10	0	
Madhipura	10	0	
Supaul	11	8	

Purnea.—No rain. An eight-anna crop of winter rice expected. *Rabi* being sown. Mustard in flower. Rain now would damage early mustard, but benefit other *rabi* crops. No cattle-disease. Fodder and water sufficient. Prices of common rice:—

	Srs.	
Sadar	10	per rupee.
Kishanganj	8	
Araria	11	

Malda.—No rain. Weather getting cool. Harvesting of early winter rice commenced; 4 to 6 annas crop expected. Wheat and other *rabi* crops in Kaliachak and English Bazar thanas are being injured by insects for want of rain. Ordinary rice is selling at 10 to 11 seers a rupee. No want of fodder and water.

Sonthal Parganas.—No rain. Weather cloudy and warm in day. Dews scanty. Common (new) rice 8 to 13 seers, average 11 seers; Indian-corn 12 to 20 seers, average 15 seers per rupee.

Cuttack.—Slight showers of rain in some places, not enough to affect outturn of crops, which are withering for want of moisture. *Laghu* rice being harvested. *Guru sarad* in ear. Insects disappearing. Food-grains not easily available in places. Condition of cattle generally good. Fodder not sufficient in some localities. Common rice sells as follows:—

	Srs.	c.	
Cuttack	11	13	per rupee.
Jajpur	11	13	
Kendrapara	14	7	
Banki	15	12	

Balasore.—Weather seasonable Sky occasionally cloudy. Slight rain on the 9th in a few villages near Balasore. No change in state or prospects of crops. *Rabi* sowings retarded for want of rain. Fodder and water sufficient. Common rice selling at 11 and 13 seers per rupee at Sadar and Bhadrak respectively.

Angul.—Weather hot and dry. *Laghu* paddy has been reaped. *Sarad* paddy ripening. *Biri* being gathered; *kasi* in seed; both these very poor from want of moisture. Crop prospects much the same as previously reported. Condition of cattle fairly good. Coarse rice sells at 16 seers per rupee in Angul and 18 seers in Khoudmals.

Puri.—Slight rain in parts of the district, but more wanted badly. Weather occasionally cloudy. Prospects of crops much the same as last week. Fodder sufficient. Condition of cattle good. Price of common rice 11 seers per rupee in the Chilka and 12 to 16 seers elsewhere.

Hazaribagh.—Weather hot in day; cold at night. No prospect of rain. Prospect of paddy crop 2 to 8 annas. Rice sells at 7½ to 9 seers per rupee.

Lohardaga.—Reaping of *don dhan* continues. Rain badly wanted for *rabi* crops. Rice sells at 9 to 10 seers per rupee. Fodder and water sufficient. No report of cattle-disease.

Palamau.—No rain, but it is urgently needed for sowing *rabi*. Water and fodder still sufficient. Common rice sells at about 8 seers per rupee at Sadar.

Manbhum.—No rain. Weather seasonable. Prospects of crops on the ground remain unchanged. Dried up paddy plants still being cut for fodder. Cattle-disease still reported from three thanas, but appears to be decreasing. Fodder and drinking-water sufficient for the present. Common rice sells at 9 to 11 seers per rupee at Sadar and at 8½ seers at Gobindpur. Supply of food-grains at present sufficient.

Singhbhum.—Rain still holding off. The paddy outturn of this district is 10 annas. *Rabi* not doing well. Old rice sells at 11 seers per rupee, and new rice at 12 seers.

General Summary.—There was some rain in Northern Bengal and in parts of Orissa, and also in the Brahmanbaria subdivision of Tippera. It is said to have been insufficient to benefit the rice crop; and prospects remain generally unaltered. In Rangpur and Bogra the rain was accompanied by hail, which did some damage to the crops, but in these two districts the prospects of the winter rice crop are reported to be fair. In Saran locusts have done considerable damage. The *rabi* crops are reported to be germinating well in Northern Bengal and in Patna, Gaya and Saran; elsewhere the prospects of these crops are unfavourable. Cattle-disease is still reported from a few places in Bankura, Midnapore, Mongbyr, Bhagalpur, and Manbhum. Prices continue very high, but, except in Patna and Champaran, there has been no material rise since last week. In Patna and Champaran and the Bhabua subdivision of Shahabad test works have been opened, but in Patna they have not been largely attended In Champaran the number employed on the 14th was—men 705, women 444, and children 268.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 17th November, 1896.

M. FINUCANE,
Offg. Secy. to the Govt. of Bengal.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF OCTOBER 1896.

THE weather in Bengal during October may be described in a few words. There has been very little tendency for the pressure distribution to assume the cold weather appearance; there has been, as in August and September, an entire absence of cyclonic storms in the Bay: the rainfall which almost entirely ceased in the middle of September has never been renewed, except to the extent of a few light showers in the east and north of the province, chiefly in North Bengal, in the hill districts: also westerly winds have prevailed with unusually high day temperatures and comparatively cool nights.

From the absence of cyclonic storms and rainfall, it may be seen that settled weather has prevailed over the whole province, and that the changes in the various meteorological elements have been as a rule small and such as occur during settled weather. Conditions from day to day have shown almost identical though abnormal features, and the description of weather for one day in Bengal might almost be taken for that of any other day in the month.

One peculiarity in the pressure distribution has been the high readings in the Circars and Orissa; and as these belonged to a high pressure area over Central India, they have been attended by westerly winds of daily occurrence across the west and centre of the province. These winds being land winds from a highly heated tract of country, day temperatures were several degrees above the normal day after day with a short interruption in the early part of the month. On the other hand, the nights being cloudless and still, greater radiation of heat than usual occurred, and the night temperatures were frequently from 3° to 4° below the normal, especially in the west of the province. The extent to which the range of temperature has at times varied from the normal is shown by the mean maximum and minimum temperatures for the month. In South Bihar and the greater part of Chota Nagpur the mean maximum temperature was 5° to 6° above the normal. This excess diminished towards the east and south, but is less than 2° at a few eastern stations only. The greatest defect in minimum averages is 3° in South-West Bengal, and generally defect is from 1° to 2°. The average increase of range is therefore 5° over a great part of the province.

Rainfall during October being caused by the cyclonic storms which form in the Bay and move in a northerly or north-westerly direction into Bengal, the causes of the non-occurrence of these storms are intimately connected with the failure of rainfall. An investigation of such causes cannot be taken up in a report of this nature, because they probably depend on the condition of the higher levels of the atmosphere which can only be guessed at. On the two occasions when disturbances appeared to be beginning, there was nothing to show that in the early stages of their development there was anything unusual, but the shallow depressions soon disappeared without having moved far from the south or south-east of the Bay where they began.

At the beginning of the month pressure was a tenth of an inch above the normal in the Circars, between ·05 and ·1 inch in the west, and nearly normal in the east of the Bay, while over Bengal there was a small excess. Readings were very uniform, but lowest in the north of the province and in Burma. A fall of pressure which began rather rapidly in Bihar on the 1st continued moderately over both the Bay and the province on the 2nd. Being followed by a moderate rise in Bengal and slow downward changes in the south-east of the Bay, a shallow depression appeared over Lower Burma and the adjacent sea. This appearance of a depression was more marked on the 5th, when readings varied from 29·83 inches in Madras to 29·69 inches in the south of Burma. As winds were cyclonic and steadily increasing in strength at the Burma stations, there was every prospect that the depression might move across the north of the Bay and give rise to the unsettled weather usual under such circumstances. Probably owing to the relatively high pressure over the Indian Peninsula, the depression moved northwards over Burma, and soon became diffused. By the 9th the distribution was again nearly normal.

The weak current of moist air which followed the depression northwards over Burma caused cloudy weather and light rain as far north as Assam, and extended to parts of East and North Bengal. The falls in these districts, however, were all inconsiderable.

The steady rise of pressure between the 8th and 12th restored the distribution to what it was at the beginning of the month. It was again high in the Circars and moderately high elsewhere, and it remained so with but slight variations till the 19th, when a second shallow depression appeared in the south-east of the Bay. This was due much more to a brisk rise of pressure in Bengal than to the slight fall in Burma. The depression remained diffused on the 20th, and on the following day it had almost entirely disappeared.

By this time pressure had become highest in Assam and northerly winds had extended over North Bengal, but the high pressure in Central India remained unaltered and prevented these northerly winds becoming general in Bengal. In consequence the prevailing wind direction was still west or south-west, and day temperatures remained from 3° to 6° above the normal. The interaction of the north-easterly winds from Assam with the westerly winds

prevailing over a great part of the province gave rise to cloudy showery weather in North Bengal, chiefly in the hill districts. The falls were almost always light and usually local, but a few reports of between one and two inches were received. From the 21st to the end of the month there was no change of any importance. Pressure remained high and underwent the small oscillations usual in settled weather, and south-westerly winds continued with high day temperatures except in North Bengal, where the north-easterly winds were still causing cloudy weather and light scattered showers over the hills.

Pressure was steadily above the normal, at times by considerable amounts, except for a few days at the end of the first week, while the first shallow depression was lying over the south of Burma and the east of the Bay. The defect appeared in Lower Burma on the 3rd, and while gradually increasing extended westwards over the Bay. When the depression was deepest, defect varied from ·05 inch in the Circars to ·2 inch in the south of Burma. By the 9th there was very little defect, and as the steady rise continued the high pressure distribution was again restored, and remained a marked feature of the weather till the end of the month.

Average pressure for the whole month was very nearly 29·9 inches at all stations. Over a great part of the province it was just under that amount, and it was only at a few outlying stations that it was over. The mean excess varied from ·05 inch in Orissa and Chota Nagpur to ·02 inch in Bihar.

Temperature.—As stated above, day temperature has been almost steadily above the normal by amounts increasing from the east westwards and at times by almost as much as 10° in Bihar and Chota Nagpur. At the same time night readings have been as regularly below the normal, but only by a few degrees. Mean day excess for the month varies from 7° in South Bihar to 1° in the eastern half of East Bengal, and the night defect is from 2° to 3° except in Chota Nagpur and parts of North and East Bengal, where the average night temperature is very nearly normal.

In consequence of the excess during the day being partly neutralised by the defect at night, the mean temperature for the whole month varies by only 1° or less from the normal in Bengal Proper, and in the western districts mean excess is under 3°. The means for the larger divisions are above the normal by about half a degree in Lower Bengal and Orissa, by 1° in North Bengal, and nearly 2° in Bihar and Chota Nagpur.

Rainfall.—Practically no rain fell except in a part of Orissa near the coast and in East and North Bengal. There were occasional inconsiderable showers in Bihar and South-West Bengal, giving an average of ·05 inch over the whole area of the divisions, and in Orissa the average was only ·11 inch. In East Bengal there was ·49 inch, and in North Bengal, chiefly because of showers in the hills, slightly more than 1 inch.

Most of the stations in the Cooch Behar, Jalpaiguri and Darjeeling districts received between 2 and 5 inches, and a few in the extreme east of East Bengal had more than 1 inch. In other parts of East and North Bengal the total fall was less than 1 inch and frequently less than half an inch.

The following table gives a comparison between the actual monthly and total rainfall and the normal rainfall of the province up to the end of October in the same form as has been employed in the previous monthly abstracts of the present year. The figures represent the ratio of the rainfall of each month of the present year to the normal rainfall expressed as a percentage. The table thus gives a condensed summary of the rainfall data of the year for each meteorological division. The first ten columns give the percentage amount of rainfall received in each month, and the last column the percentage rainfall of the whole period from the 1st of January to the end of October :—

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	Actual rainfall of first ten months of 1896 expressed as a percentage of the normal fall for the period.
South-West Bengal ...	31	18	18	36	97	128	95	71	86	1	83
North Bengal ...	8	5	2	63	142	49	106	39	109	26	78
East Bengal ...	48	110	43	94	115	99	72	46	118	9	80
Bihar ...	16	5	0	26	102	84	86	75	75	2	74
Orissa ...	3	0	60	31	78	162	131	128	88	2	104
Chota Nagpur ...	6	9	0	0	49	139	112	89	65	0	87

The following table gives full data for the comparison of the actual and normal rainfall of the month of October in all districts of the province. The figures are obtained in the manner explained in previous monthly summaries. The first column gives the average district rainfall as determined from the rainfall observations of the past 26 years ; the second column gives the actual district rainfall as determined from the actual weighted rainfall of the month at the reporting stations in the district ; the third column expresses the ratio of

the actual district rainfall to the normal as a percentage; and the fourth the same information in a slightly different form:—

Percentage Table for October 1896.

Division.	District.	Normal district rainfall for October.	Actual district rainfall for October 1896.	Percentage of actual to normal rainfall.	Percentage excess (+), deficit (−).

The total fall from 1st January to 14th November 1896		53·17
The average fall of the corresponding period for 24 years, Surveyor-General's Office		65·11

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed, open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official Tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

REPORT ON THE STATE OF THE SALT MARKET FOR THE SECOND QUARTER OF 1896-97.

No. 998B., dated Calcutta, the 12th November 1896.

From—E. H. WALSH, Esq., Secretary to the Board of Revenue, L.P.,
To—The Secretary to the Government of Bengal, Financial Department.

SALT.

THE HON'BLE MR. W. H. GRIMLEY.

I AM directed to submit the following report on the state of the salt market for the second quarter of 1896-97, comprising the months of July, August, and September 1896.

2. The quantity of salt of every description cleared during the quarter under review amounted to 26,77,294 maunds, against 28,43,269 maunds in the previous quarter, and 26,12,380 maunds in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 61,68,873, against Rs. 68,06,060 in the previous quarter and Rs. 61,10,917 in the corresponding quarter of the previous year. In all cases fractions are omitted.

3. The quantity of locally-made salt removed from the golas in Orissa during the quarter under review, and the quantity which remained in store at the close of the quarter, are shown in table I below:—

TABLE I.

1	2
	Puri.
	Mds.
Balance at the close of the previous quarter ...	3,95,554
Manufactured and added during the quarter ...	48,600

Sold during the quarter	16,134
Wastage	2,471
Total ...	18,605
Balance at the close of the quarter	4,25,549

The total sales of locally-made salt during the quarter under review amounted to 16,134 maunds, against 18,130 maunds in the previous quarter, and 22,180 maunds in the corresponding quarter of the previous year. Duty was levied during the quarter on the full quantity sold.

4. The subjoined table II shows in detail the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter under review, as compared with the figures of the corresponding quarters of the previous two years:—

The stock in bond at the close of the quarter under review, though higher by 1½ lakhs of maunds than at the close of the previous quarter, is much below that at the close of any of the preceding three quarters; and the shipments of salt for the port of Calcutta, as noted in paragraph 9, have also declined considerably.

6. The despatches of salt from Calcutta by water and the three railways passing the several pass-stations into the interior of the country both east and west of the river Hooghly, as well as the despatches by steamers and flats during the quarter under review and the corresponding quarters of the previous two years, are shown in table IV below:—

7. The quantity of salt despatched by the East Indian Railway to the stations beyond Buxar during the quarter under review amounted to 9,742 maunds 30 seers, as noted in the margin, against 7,495 maunds 20 seers in the previous quarter, and 11,616 maunds 20 seers in the corresponding quarter of the previous year.

	Mds. s.

No transactions in sea-imported salt have been reported for the quarter from Cuttack and Puri.

RECONSTRUCTION OF THE PRESIDENCY GENERAL HOSPITAL.

MUNICIPAL DEPARTMENT—MEDICAL.

Calcutta, the 23rd November 1896.

RESOLUTION—No. 4366Medl.

READ—

The Report of the Committee appointed by the Government Resolution No. 314T.M., dated 13th June 1896, to consider and report on the structural requirements of the Presidency General Hospital.

In February last, Brigade-Surgeon-Lieutenant-Colonel A. Crombie, the Superintendent of the Presidency General Hospital, drew prominent attention to the acknowledged defects in the structural arrangements of the hospital, and submitted certain proposals for improving and adding to the existing buildings. He pointed out at the same time that the reforms proposed by him would cost a large sum; that it was doubtful whether the present buildings would bear altering, and whether the results would justify the expenditure involved, and he suggested that the better plan would be to remodel the entire hospital so as to adapt it to modern requirements. The Lieutenant-Governor accordingly decided to appoint a Committee, consisting of the following gentlemen, to consider and report on the subject:—

The Hon'ble H. H. Risley, C.I.E.	*President.*
The Hon'ble W. B. Gladstone	*Members.*
Surgeon-Colonel G. C. Ross, Inspector-General, Civil Hospitals	
The Hon'ble J. G. H. Glass, C.I.E., Chief Engineer, Public Works Department	
Surgeon-Lieutenant-Colonel R. Cobb, Officiating Surgeon Superintendent, Presidency General Hospital ...	
W. Banks Gwyther, Esq., Under-Secretary, Public Works Department	*Secretary.*

2. The report of the Committee was submitted on the 2nd September. In it they discuss the questions referred to them very fully, and recommend the demolition of most of the existing buildings and the complete reconstruction of the hospital at a cost of twenty-two lakhs. The Lieutenant-Governor was not prepared to accept so costly a scheme without full examination, and he therefore deferred passing orders on the report until he could visit the hospital himself and see on the spot the precise effect of the Committee's proposals. It was clear, however, from the first that their scheme proceeded in the main on sound lines; that two out of the three main blocks of the present hospital must be condemned as defective in every respect, and that several additional buildings would have to be constructed. As the existing site would not admit of these changes being carried out, and funds were then available in the budget of the year, His Honour decided to take up at once the busti land on the east of the hospital, the acquisition of which the Committee consider desirable in any case on sanitary grounds and essential for the purpose of gaining space to extend the hospital buildings. At the same time the preparation of detailed plans and estimates for the entire project was sanctioned, and the Public Works Department were directed to consider whether the central building of the present hospital could not be converted into the administrative section of the new scheme, and a portion of it fitted up as an obstetric ward.

3. The Lieutenant-Governor has since visited the hospital, and, after discussing the scheme with the members of the Committee and the medical staff, has decided that the central building shall be retained for the purposes indicated above. This will reduce the estimate of the cost of the buildings by about a lakh and a quarter. Further reductions may also probably be effected in the estimate for the paying patients' block. The Lieutenant-Governor can recognise no obligation to provide in a public hospital at the cost of the tax-payers special accommodation for the wealthier classes of Europeans, who can afford to pay for treatment in their own houses or in a private hospital. It is true, as the Committee observe, that Hospital Port Dues are levied for the purpose of

affording medical aid to the officers and seamen of ships visiting the port, and the Lieutenant-Governor is prepared to admit that reasonable provision should be made for officers who come to the hospital as paying patients. But the European community generally cannot claim, as of right, that in their case the standard of comfort observed in respect of rooms, furniture, cooking, and attendance shall be higher than a public hospital would ordinarily afford, unless they are prepared, not only to accept a scale of charges bearing a reasonable relation to the working expenses, but also to raise by subscription a substantial proportion of the cost of constructing the separate block which is proposed. In the event of these conditions being complied with, the Lieutenant-Governor would be willing to place the management of the paying patients' block under the control of a Committee on which the subscribers would be represented.

4. Subject to the foregoing remarks, the Lieutenant-Governor accepts the scheme drawn up by the Committee as offering the best possible solution of the questions referred to them, and he will endeavour to give effect to their proposals as soon as the resources of the Province permit. In June last, when the Committee was appointed, the financial outlook was more promising than has been the case for many years; and the Lieutenant-Governor was justified in hoping that it would be in his power to carry out extensive reforms, not only in the European General Hospital, but also in the Medical College and Campbell Hospitals, where the bulk of the patients are natives. Since then the position has undergone a material change; the Province is now threatened with scarcity, if not with famine; the Government of India has enjoined the observance of the strictest economy; and the Provincial balance of twenty-one lakhs must be held in reserve to meet expenditure on relief. Sir Alexander Mackenzie will, however, press upon the Government of India that the gradual reconstruction of the Presidency General Hospital on the lines laid down by the Committee and the other necessary medical reforms in Calcutta must be undertaken as soon as the money can be found; and he hopes that in the Provincial contract now under consideration it may be possible to provide funds for the completion of a large portion of the work within the next five years.

5. In conclusion, the Lieutenant-Governor desires to thank the Committee for the thoroughness with which they have discussed the questions referred to them, and for the admirable report which they have submitted. His acknowledgments are more especially due to Mr. Banks Gwyther, the Secretary to the Committee, for the design of the buildings and for the excellent plans which accompany the report. The report of the Committee with this Resolution will be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,
Secy. to the Govt. of Bengal.

Report of the Committee appointed to consider and report on the structural needs of the European General Hospital, Calcutta.

By the Government Resolution No. 314T.—M., dated the 13th June 1896, a Committee consisting of the following gentlemen was appointed to consider and report on the structural requirements of the Presidency General Hospital:—

The Hon'ble H. H. RISLEY, C.I.E.	*President.*
The Hon'ble W. B. GLADSTONE	*Members.*
SURGN.-COL. G. C. ROSS, Inspector-General of Civil Hospitals	*Members.*
The Hon'ble J. G. H. GLASS, C.I.E., Chief Engineer, P. W. Dept.	*Members.*
SURGN.-LIEUT.-COL. R. COBB, Offg. Surgn.-Supdt., General Hospital	*Members.*
W. BANKS GWYTHER, ESQ., Under-Secy., P. W. Dept.	*Secretary.*

Points referred to Committee.

In the Resolution appointing the Committee reference was made to the Inspection Report of the Inspector-General of Civil Hospitals, dated the 13th December 1895, and to a letter from Dr. Crombie, Surgeon-Superintendent, dated the 14th February 1896, as indicating defects in the hospital buildings, and suggesting certain alterations and additions. It was stated that the attention of Government had frequently been drawn to the unsatisfactory condition of the hospital and the many reforms needed in order to bring it up to the standard of metropolitan medical institutions of the present day. In order to carry out Dr. Crombie's proposals, very large expenditure would have to be incurred, and the question was raised whether, in view of the structural defects of the existing buildings, it would not be as well, once and for all, to reconstruct the entire hospital so as to adapt it to the requirements of the present day. The attention of the Committee has therefore been directed in the first place to ascertaining in what respects the existing structures are defective, whether the defects are such as can be removed at a reasonable cost, and to what extent any scheme for merely remodelling the existing buildings is likely to prove adequate and satisfactory. The Committee have in the next instance turned their attention to the alternative of reconstructing the hospital in accordance with the most approved modern principles, so as to secure for Calcutta an institution that will provide suitable accommodation for the various classes of patients who may resort to it, and will supply them with all necessary appliances and conveniences while under treatment.

The present Hospital.

2. The early history of the General Hospital cannot be fully cleared up. Of the three main buildings, it is believed that the one known as the central block was not originally constructed for the purposes of a hospital, but was purchased by Government in 1768 from a native gentleman who occupied it as a garden-house. The two detached wings, known as the eastern and western blocks, were erected in 1795, the central building being then used as a Civil Hospital, the eastern building as a European Military Hospital, and the western building as a hospital for sepoys. This arrangement continued till 1870, when the European soldiers were transferred to the building formerly occupied by the Sudder Court, and now known as the Military Station Hospital, Dallanda, and the sepoys to a new hospital specially constructed for them at Alipore. Since then the institution has continued on its present footing as a general hospital for Europeans. Minor buildings have been added from time to time, but in the main the hospital may be said to consist of buildings erected more than a century ago, one at least of which was not constructed for use as a hospital.

Its site.

3. Before entering on a detailed account of the existing buildings it is desirable to describe the site. This is airy and healthy for Calcutta, and is generally regarded as occupying an appropriate position for a hospital. It comprises nearly 70 bighas of land, and measures 1,200 feet from east to west and 825

from north to south. It thus admits of the hospital buildings being placed so as to get the full benefit of the prevailing wind, which blows across the grounds without obstruction. In respect of its surroundings the site is also advantageous, having the large open maidan towards the north, the Bhowanipore Road and Military Hospital on the west, and the European Lunatic Asylum and some native residential houses to the south. On the east side, however, there is a basti of considerable size, which should, if possible, be removed, as it is open to many objections from the sanitary point of view. Reference will be made to this basti further on in the report. The large tank in the compound should be filled up.

List of existing buildings.

4. The following are the buildings which now stand in the General Hospital compound:—

(i) **Central Block.**
(ii) **Western Block.**
(iii) **Eastern Block.**
(iv) **Quarters of Military Assistant Surgeons.**
(v) **Stewards' quarters.**
(vi) **Bacteriological Laboratory.**
(vii) **Contagious Diseases Ward.**
(viii) **Medical Officers' quarters.**
(ix) **Canning Home.**
(x) **Nurses' quarters.**
(xi) Cook-house for central and western blocks.
(xii) Cook-house for eastern block.
(xiii) Servants' quarters, eastern block.
(xiv) Coach-house and stable.
(xv) Protestant Chapel.
(xvi) Dead-house.
(xvii) Mehters' quarters.
(xviii) Dhobis' quarters.
(xix) Cow-shed.
(xx) Medical officers' servants' quarters.
(xxi) Store-house.
(xxii) Western cook-room.
(xxiii) Eastern cook-room.
(xxiv) Cook-room of Canning Home.
(xxv) Cook-room of nurses' quarters; durwans' lodges, latrines, sanitas, dhobis' platform, cow-shed and water reservoir.

For our present purpose only the main buildings which are shown in thick type in the list need be considered, and these will be noticed at length.

Defects of the three main blocks.

5. Patients are now accommodated in the three main blocks—**Central, Western** and **Eastern**—which are shown in plan 1. It will be seen that these buildings, which stand nearly in the middle of the site, are so placed that the Eastern and Western blocks obstruct the free passage of air to the Central block. Plans 2, 3 and 4 illustrate the arrangement of wards in each block. The condition of the buildings from an engineering point of view was carefully considered by the Superintending Engineer, Central Circle, who, at the request of this Committee, made a close personal examination of them, and has furnished the following report on the subject:—

I inspected the three main buildings of the General Hospital on 9th and 10th instant.

Central Building.—I consider this building structurally sound. The masonry, though not up to our present standard, is good: bricks fair, mortar fair, and the walls are thicker than as now built. The weight borne by foundations is nearly double the Calcutta standard per superficial foot, and in any alterations no increased weight can be placed on the existing walls. The average pressure is 2 tons per superficial foot. The walls are, so far as I could see, uncracked. The floor and roof-beams are generally sound, though of weak scantlings, and the first floor has a slight deflection in the main wards.

The walling would permit of considerable alterations, and should stand a good deal of interference without more than ordinary risk.

The ground floor is low—only 1 foot above ground level—and damp, and the wards badly lit, gloomy, and ill-ventilated. The rooms are of a good height—13 feet 4 inches from floor to floor. The central staircase interferes in both stories with light and ventilation. If the ground floor of the main wards were raised and flued, the inner south walling removed and replaced by pillars and bressummers, as in first floor, the wards would be drier and better lit, especially if the central staircase were removed and placed elsewhere; but the lowering of the height of rooms and doorways would affect the ventilation. Without some drastic alteration of the general design, it seems to me scarcely possible to utilise these ground floor wards and make them up to the standard.

The upper story wards appear to be quite sound, and, except for the obstruction caused by the central staircase, are airy and well lit. The ventilation is along the wards, and any effluvia is carried, intensifying, from patient to patient.

Eastern Block.—The masonry work in this block is not so sound as in the central block—more unequal in quality. The walls are, so far as I could judge, uncracked. The inner south wall might be dismantled with safety, no extra weight being placed on remaining walls. Piercing of openings in existing walls or widening of ditto should be limited as much as possible, and should be carefully supervised, as there is reason to believe the work is very unequal in quality.

The floor heights are very low. The ground floor is little more than a cellerage; the other two floors are only 11 feet 6 inches and 14 feet respectively from floor to under side of beams. This makes impossible an economical distribution of floor space per patient, with proper air space or cubic content, and the unit cost per patient for an altered ward will probably be found to be more than in an entirely new structure.

Western Block.—The walls are of very indifferent masonry, quite unsound; bricks and mortar of poor quality. The eastern wall is tied back by iron tie-bolts and plates. That end of the building is said to have badly cracked years ago. The ground floor is low, damp and uninhabitable. The first floor flooring is cracked, cut up, and seems very unsound. Light and ventilation are both much wanting. The staircase blocks up the wards and interferes with light and air.

I consider that much interference with the structure of this building is risky. If the requirements necessitate extensive alterations, it would, in my opinion, be better to rebuild.

Generally.—The central block would, in my opinion, from a structural point of view, bear considerable alterations with only ordinary risk, the eastern block with some risk, and in the western block considerable structural alterations are not advisable.

Quarters of Military Assistant Surgeons and Stewards.

6. The buildings known as (iv) the **Military Assistant Surgeons' quarters**, and (v) the **Stewards' quarters** (now inhabited by the Ward Masters), were condemned several years ago as being structurally unfit for the purposes to which they are put and incapable of being remodelled, except at a prohibitive cost. In the Public Works budget for the current year provision has been made for the construction of a new block of quarters for these officers, but the commencement of the work has been deferred pending the consideration of the larger questions affecting the hospital as a whole, which have been referred to the Committee. The proposals which the Committee have to make on this point are stated in paragraph 31 below.

Bacteriological Laboratory

7. The **Bacteriological Laboratory**, which stands in the north-east corner of the hospital compound, was erected from funds supplied by the Government of India, the Local Government giving the site. It is understood that when the proposed Central Laboratory is established at Agra, the Calcutta Laboratory will be closed, and the building with its site will revert to the Local Government. On this assumption the Committee propose to utilise it for the purposes of the scheme of reconstruction which they recommend.

Contagious Diseases Ward.

8. The existing **Contagious Diseases Ward** (No. VII on the list), formerly known as Sambu Nath Pandit's Ward, was opened in 1873 for the reception of native in-patients, but was closed in 1878 as "being costly and out of all proportion to its use." It stands to the south-east of the eastern building and consists of two main rooms, each 28′ 2″ × 20′, surrounded on all four sides by small rooms and verandahs. In 1887 it was converted into wards for cholera and contagious diseases, latrines and quarters for servants being added. It has accommodation for 18 patients.

Medical Officers' Quarters.

9. The **Medical Officers' quarters** (No. VIII on the list) stand at the north-western corner of the hospital compound, and are in tolerably good condition. The building is two-storied and is divided into four suites of apartments, of which the two central suites are occupied by the Resident Medical Officers, while the British Medical Officer in charge of the Station Hospital lives at the east end, and the Superintendent of the Presidency Jail at the west end.

Canning Home and Nurses' quarters.

10. **The Canning Home and Nurses' quarters** (Nos. IX and X) are connected buildings, each two-storied, standing at the south-west corner of the hospital compound, and having a separate entrance from the Bhawanipore Road. The Canning Home was built by Government from subscriptions raised for the purpose. The Nurses' quarters were erected in 1879 at a cost of Rs. 30,600: both buildings are in good condition.

Probable number of patients.

11. Before considering whether any of the existing buildings should be retained, remodelled, or reconstructed, an estimate must be made of the hospital requirements of the European population of Calcutta and the districts of Bengal and Assam from which patients are ordinarily received. The number that can beaccommodated in the hospital at present is 220 ordinary patients and 18 suffering from infectious diseases, making a total of 238. The daily average number of patients has risen during the last five years from 144·63 to 197·62, or by 36·64 per cent., and the maximum number treated in 1895 was 289. The latter figure may therefore be taken as indicating the possible demand that has to be met. This admits of being reduced by about 20, if certain non-European patients are treated in future in the new hospital at Bhawanipore, and the probable maximum demand under existing conditions may thus be stated at 270. On the other hand, with the extension of railways, the opening of new mills, tea-gardens, and coal mines, and the general industrial development of the country by means of European capital, the European population of the enormous area served by the hospital tends steadily to increase; and the Committee are satisfied, from evidence which has come before them in various ways, that the defective arrangements of the present hospital deter many persons from seeking admission, and that with improved accommodation and better appliances a substantial addition to the number of patients may be looked for. Bearing in mind then that the accommodation to be provided in a hospital is determined, not by the daily average number of patients, but by the maximum number that may claim admission to a particular ward at any given time, and also in view of the considerations just mentioned, the Committee are unanimously of opinion that accommodation should be provided for 336 beds as set out in detail in paragraph 27 below.

Drawbacks to remodelling existing buildings.

12. Having regard to the heavy expense of demolishing the present hospital and constructing an entirely new one in accordance with modern principles, the Committee have carefully considered the possibility of adapting the present buildings so as to remove some of their most prominent defects. They have accordingly drawn up a plan to show how the eastern and western blocks, which in some respects lend themselves to a satisfactory rearrangement of floor space, could, but for their structural defects, be partially remodelled. An estimate has also been prepared for laying the floors with marble and lining the walls to a height of 5 feet from the floor with glazed tiles, and introducing other improvements. In both buildings, however, there are inherent structural defects beyond all remedy, and the accommodation that could be provided would in any case be small in relation to the ground space taken up. The structural shortcomings of these blocks are clearly brought out in the report submitted to the Committee by the Superintending Engineer. Although the buildings have three stories, the basements of both are damp and absolutely unfit for the reception of sick persons. The first or principal floor has a height of only 11 feet 6 inches from floor surface to beam level, which is less than the recognized minimum of 13 feet, and this defect cannot be rectified without alterations that would amount practically to reconstruction. The top floor has a height of 14 feet to beam level, but even this is less than ought to be given in properly constructed wards. The central building, although according to the Superintending Engineer's report less unsound than either the eastern or western buildings, is, from the arrangement of its floors and the disposition of the rooms, quite unsuited for hospital purposes, no matter how it may be remodelled. In the first place the entire block, which contains only two stories, is so built that ventilation is along the wards instead of across them—an arrangement condemned by all authorities, but which it is impossible to alter. The lower floor is raised only a foot above the ground, and, being damp, dark and ill-ventilated, cannot in the opinion of the Committee be used, even if raised and flued in the manner suggested by the Superintendent Engineer. Finally, this block, together with the eastern and western buildings, occupies the middle of the site, and thus interferes materially with any scheme for new buildings. For these reasons the Committee have come to the conclusion that the three main blocks of the present hospital are defective as buildings, unwholesome as hospital wards, and unsuitable for administrative purposes. It is their settled conviction that no half-measures are feasible, and that the only prospect of effecting any real improve-

ment in the arrangements of the European General Hospital, is to be found in the demolition of the three main buildings and the complete reconstruction of the hospital on modern lines.

General outline of scheme.

13. The scheme which the Committee advocate is based upon proposals framed by Surgeon-Lieutenant-Colonel Cobb, and is shown in block plan No. 5 attached to this report. Its main features may be summarised as follows:—

I.—That of the existing buildings only the medical officers' quarters and out-offices, the Canning Home, nurses' quarters, and out-offices, and the laboratory should be retained.

II.—That the plot of land on the east, shown in plan No. 1, should be acquired in order to provide space for new buildings.

III.—That new buildings should be provided for hospital purposes, viz., separate blocks for (*i*) paying patients, (*ii*) women and children, (*iii*) adult male patients, (*iv*) infectious diseases, (*v*) administrative offices, (*vi*) lying-in cases; and that new kitchens, a steam laundry, a new mortuary and other subsidiary buildings should be constructed to complete the accommodation necessary for the efficient working of the hospital.

IV.—That the standard of construction of the buildings should be such as modern science has shown to be necessary, and that the furniture and fittings, sanitary appliances and general equipment should be of the most approved patterns.

V.—That the European Lunatic Asylum should be utilized as quarters for Military Assistant Surgeons, stewards and menials.

VI.—That a portion of the Native Lunatic Asylum grounds should be handed over for the purposes of the hospital dairy.

VII.—That a house should be built for the Superintendent in the vicinity of the Hospital.

Arrangement of proposed new blocks.

14. In arranging the new buildings, two essential conditions have to be complied with, viz., that the wards should be so placed as to ensure for the patients the conditions best suited to their recovery, and that the reception and prompt treatment of patients and the proper supervision of the work of the hospital should be rendered as easy as possible. To give effect to the first condition, all buildings containing patients are arranged with their longer sides facing the prevailing south wind so as to ensure the thorough cross ventilation of the wards. The two main buildings, containing the bulk of the patients, are given the most prominent position parallel to the south boundary wall of the hospital, and are placed end-to-end in line. The paying patients' block is placed at the north-western corner, and the infectious wards near the north-eastern corner, the rest of the buildings being arranged with reference to the purposes they have to serve. After much consideration and discussion the Committee are convinced that no other arrangement of the main blocks is possible, without cramping the other buildings, blocking the passage of air, and locating the infectious wards in dangerous proximity to the ordinary wards. The plans adopted will, however, render it necessary to acquire the basti land on the east side of the hospital up to Badiapara road, the cost of which is estimated at Rs. 1,45,000.

Arrangement for admission.

15. In respect of the second condition, the Committee have kept in mind the frequent complaints that have been made of delay in admitting patients, more especially in cases of accidents. To guard against this in the future, provision has been made in the scheme for an entrance lodge, where a European gate-keeper will be given suitable quarters, and will be always in attendance to control and direct persons entering and leaving the hospital compound. It is proposed that the lodge should be connected by telephone with the administration block, where the Resident Surgeon, or Military Assistant Surgeon on duty, can be immediately communicated with. Directly in front of the entrance gate, but set back so as to be in proximity to the main wards, is placed the administration block, in which the offices of the Superintendent and the Medical Officer on duty, all hospital stores, linen and bedding are contained, and all appliances would be provided for the immediate treatment of accident cases. The Medical Officer's room looks out towards the entrance gate, and commands a view of all the other buildings. It should be connected by telephone with all parts of the hospital.

Paying patients' block.

16. Great stress has been laid by the Chamber of Commerce, the Trades' Association and the Defence Association, in communications which they have addressed to the Committee, on the necessity for providing suitable accommodation in a separate block for the wealthier class of paying patients. There can be no doubt that the want of such accommodation is keenly felt both by residents in Calcutta and by persons who come in from the mufassal for treatment, and it is abundantly clear that the existing arrangements cannot be too strongly condemned. As it is probable that the receipts from patients of this class would cover a large proportion, if not the whole, of the cost of maintaining the block, and there is some prospect of a substantial sum being contributed from private sources towards its construction, the Committee consider that this part of the hospital may properly be designed with reference to a higher standard of comfort than is necessary for the general wards. Plan No. 6 has been prepared on this assumption.

17. From the statistics of the hospital it appears that the accommodation for paying patients should be divided between men on the one hand and women and children on the other in the proportion of about two of the former to one of the latter. Thus, of the 31 rooms provided for in the plan, 21 will be required for men and 10 for women and children. The block has been arranged in the form of a central portion containing general accommodation, such as dining, recreation, sitting, and operation rooms, with staircases and lifts, and two wings, of which the eastern wing would have three stories, and would contain seven rooms in the ground floor for second class patients, and seven in each of the two floors above for first class patients. A corresponding two-storied wing would be built on the west side for women and children, with five rooms on the ground floor for second class patients, and five on the upper floor for first class patients. To render the ground floor accommodation healthy and attractive it is considered essential to raise it not less than 8 feet above the level of the ground, this being the minimum necessary to keep patients beyond the reach of miasma. The space below the ground floor forming a basement will be kept open, the portion to the south under the wide verandahs being used as an ambulatory for patients, and that to the north as a passage for servants, &c. Each suite will consist of a living room measuring 16′ × 14′, dressing room 10′×7′, and bath-room 10′×6′ 6″, and will have a verandah 12 feet wide to the south for the use of patients, and a verandah 8 feet wide to the north to serve as a passage for servants. The two end suites will be connected by a doorway so as, if necessary, to be convertible into a double suite. The height from floor to floor is proposed to be made 16′ 6″ so as to have a clear height of 15 feet below beam level: floor and ceiling ventilation will also have to be provided. The floor of the living rooms, dressing rooms and bath-rooms will be of marble, and that of the south verandahs of encaustic tiles. It is also proposed to line the walls up to a height of 5 feet with glazed tiles and to use hard plastering finished with oil paint for the rest of the wall surfaces. Wall angles and junctions of walls with floors will be rounded off. A special staircase for servants is provided for each wing to prevent their using the main staircases. The sanitary arrangements in each bath-room will be of the kind commonly used in Calcutta residences, as with so many separate bath-rooms the water-closet system would lead to a multiplication of pipes and prove a source of danger. Water, however, will be laid on throughout. As regards lighting, it is unanimously agreed that the electric light is the most suitable for hospitals, as it does not vitiate or heat the air of a room, is steady, can be regulated, and requires very little attention. If, as seems probable, a comprehensive scheme of electric lighting is carried out in Calcutta, the hospital would be connected with the general mains; it might also be possible to obtain power from the Alipore Jail electric station, or by a separate installation. The employment of electric power for punkah-pulling has been proposed and should, if possible, be carried out; it is obviously desirable to exclude punkah coolies from the vicinity of hospital wards. Under this head and that of the lighting the introduction of electric power will effect a considerable saving in the working expenses of the hospital. Space is also given in the wings for the accommodation of nurses, and the storage of medicines, of ward linen, and of patients' clothes. In the central portion there will be a lift working from basement to roof in addition to separate staircases. Rooms for the

medical officers are provided on the ground floor, an operation room over the porch, and a billiard room on the top floor. Dining and day rooms on each floor with pantries and food lifts are also necessary, and attention should be paid to the laying out of the terraced roofs, so that they may be used for recreation. A special kitchen (plan No. 11) has been provided, and a range of out-offices for private servants will also be required.

Accommodation of main blocks.

18. The two blocks for adult males and for women and children would occupy the southern portion of the site. The latter has been located westward of the former and a gap of 100 feet allowed between the two, and both blocks are set back in plan 150 feet from the south boundary wall so as to ensure a free current of air through the buildings. After careful consideration, the Committee have thought it sufficient to provide for the following accommodation in these two blocks:—

Women and children's wards—		Men's wards—	
Paying patients @ Rs. 2 and Re. 1	16	Paying patients @ Rs. 2 and Re. 1	24
Free patients ...	60	Free patients ...	162
Total ...	76	Total ...	186

Plan of block for women and children.

19. Taking the requirements of the women and children's block first, it has been found advisable to arrange the accommodation in two stories, and the plan drawn up for it (No. 7) follows the approved type of a double pavilion connected to a central block. The pavilions contain four twelve-bed wards, four two-bed wards, and four one-bed wards, or a total of 60 beds, while the central block provides accommodation for eight patients in single rooms paying Rs. 2 each per diem and eight patients in two-bed rooms paying Re. 1 per diem. The total accommodation for women and children is therefore 76. The general arrangement proposed for these wards is similar to that of the separate block for paying patients already described, except that the bath-room accommodation is located in projecting corner blocks. In regard to the basement, height of wards, flooring, and manner of finishing off the walls, it is proposed to adopt the same system as is suggested for the paying patients' block. The wards are designed 26 feet wide, and the wall space to each bed is taken at 9 feet 6 inches, so that the floor space per patient is 123½ square feet. The clear internal height of the wards being 15 feet, a capacity of 1,852½ cubic feet per patient is secured, and only one bed will be placed between each pair of windows. At the outer end of each wing projecting corner blocks are provided, that to the south being for baths and lavatories and that to the north for water closets. The further accommodation in connection with each ward consists of a nurse's room and a scullery, each with a window looking into the ward and separated by an eight-feet passage forming the entrance. There will also be a room for ward linen, a day room for patients, a two-bed separation ward, a single bed ward for critical cases, and a room for the medical officer. At the inner corners of the pavilion blocks small turrets are provided at the angles, that to the south side being for a sink and receptacle for foul articles that cannot be disposed of in the scullery, while the other turret will contain water-closets. Each pavilion is separated from the central section by a sixteen-feet gap crossed by a corridor bridge, alongside of which it is proposed to provide open iron staircases for servants. In the central section, besides the main staircase and lift for patients, are rooms for the principal medical officer and the Assistant Surgeon in charge, an operation room, a matron's room, and a recreation room for children, besides wards for the poorer class of paying patients, turret blocks containing bath and water-closet accommodation being provided at the north corners. All the sanitary appliances must be of the best kind.

Plan of Block for men.

20. In the men's block (plan No. 8) the number of patients to be provided for can be conveniently arranged in a three-storied building of the double pavilion type with a central block, the distribution of wards and patients being as follows:—

	Patients.
6 Wards with 24 beds	144
6 Separation wards with two beds in each	12
6 Special wards with one bed in each	6
12 Single paying wards at Rs. 2	12
6 Two-bed paying wards at Re. 1	12

In nearly all respects the men's block will be similar to that for women and children, the difference merely consisting in the number of stories and the number of beds to a ward. In both blocks provision has been made for the poorer classes of paying patients on a scale calculated with reference to probable requirements as indicated by the experience of the present hospital.

Administration block.

21. Intimately associated with the proper working of all the wards is the administration block, containing the rooms which are necessary in connection with the general control of the hospital, but which form no part of any special section of it. The site proposed has been selected so as to combine special facilities for the prompt admission of patients with proximity to the hospital and ready control over every branch of its working. In this building the Superintendent will transact general business connected with the hospital; patients will be received and discharged; medical and surgical stores will be kept; hospital clothes and linen stored, examined, and distributed to the various wards; laboratory work done, &c. The building (plan No. 10) will be of an ordinary type with a plinth of three feet, and will be connected by telephone with every part of the hospital.

Infectious Diseases Wards.

22. The only site that can be considered at all suitable for the wards for infectious diseases is at the extreme east on the plot of land between the hospital compound and Badiapara Lane. This is necessarily determined by the direction of the prevailing winds, and has an important bearing on the proposal of the Committee to acquire land in this direction. The existing infectious wards are all grouped together—an arrangement which is open to serious objections. After considering the demands made in the past for accommodation of this nature, the Committee have come to the conclusion that the following accommodation will be sufficient:—

		Beds.
Cholera cases	Men	4
	Women	2
Diphtheria cases		2
Measles		16
Chicken-pox		6
Total ...		30

In plan No. 9 the beds are arranged in isolated buildings connected with a central disinfecting chamber through which the nurses and doctors would pass on entering and leaving the wards. These building would be raised on an 8-feet basement, and, with the exception of the measles block, would be single-storied. Each building would have separate accommodation for nurse, scullery, linen, water-closets and baths, and a separate kitchen and servants' room. The entire group would be placed in a separate enclosure with a gate leading into the main hospital compound.

Obstetric block.

23. In deference to the representations of the Chamber of Commerce and the Trades' Association, a separate obstetric block has been included in the scheme (plan No. 10). The arguments in favour of this arrangement are clearly stated in the following extract from a letter, dated the 24th August, which has been addressed to Government by the Trades' Association:—

With regard to the new hospital, the Committee would advocate the erection, as far as possible, of separate buildings for each class of disease; they would also urge that an Obstetric ward of a superior class be added. In doing so, the Committee are quite aware that the Eden Hospital was originally intended to meet the needs of the community in this respect, but as regards the better class of patients, and also of paying patients, there appears to be considerable room for improvement in the accommodation provided by this institution. The chief objections to this hospital, from a European point of view, are (1) that it is situated in the heart of the native quarter of the town, the atmosphere and outlook being in themselves serious drawbacks; (2) that it is not exclusively for the use of Europeans, while the accommodation provided is inadequate, and falls short of the standard of the present day, such accommodation as does exist consisting principally of bare rooms, devoid of comfort; (3)

that the Medical College is essentially a training institution, and such patients in a maternity hospital attached thereto are distinctly out of place; (4) that the constant presence of the native and military students, principally the former, is undesirable. To make the hospital suitable for the accommodation of European patients would necessarily involve a considerable outlay of money; and as it doubtless meets the requirements of the poorer classes, and of native patients, it seems unnecessary to incur any expenditure in this direction, in view of the opportunity the Government now have of providing a suitable Obstetric ward in the General Hospital, which would in every respect be more desirable and calculated to attract patients.

The accommodation proposed is two single-bed wards for paying patients, two double-bed wards for free patients or patients paying the lower rates, and a segregation ward for puerperal cases. The type of building would be one-storied on an 8-feet basement, constructed on the same lines as the other sick wards, and both it and the segregation ward would have a day room and separate accommodation for nurses, scullery and linen. It is understood that the separation, not only of puerperal, but also of all obstetric cases, is insisted upon by the highest medical authorities.

Wards for inebriates and insanes.

24. It is proposed to utilise the existing bacteriological laboratory for the reception of inebriates and insanes, who disturb the other patients, and should be kept apart.

Out-patient department.

25. The scheme includes a separate building (plan No. 11) for out-patients; but in the opinion of the Committee this should not be built until experience has shown it to be necessary. The out-patient department of the hospital was re-opened in 1894, but the attendance is at present small, and it is not yet clear that special accommodation need be provided.

Laundry and kitchen.

26. The need of better laundry and kitchen arrangements has already been admitted by Government, and provision was made in the Public Works Budget for the current year for carrying out certain necessary improvements. A laundry worked by steam is a necessity in a large hospital, and in connection with it two disinfectors are required—one for disinfecting clothes from the contagious wards, and the other for disinfecting patients' clothes, bedding, &c. The site selected is at the north-east corner on the plot of land which it is proposed to acquire.

The main kitchen (plan No. 11) has been placed in a central position, and will contain, besides the kitchen and its adjuncts, accommodation on one side for daily supplies and on the other for the steward's office and certain kinds of stores. In front will be two rooms for food distribution, and at the back a kitchen yard with rooms for cooks and servants.

Other subsidiary buildings.

25. The other new buildings proposed are—

(*i*) A 'destructor' to be placed near the laundry for destroying all articles which are likely to carry infection. This building, as well as the laundry and disinfectors, will be provided with a chimney to throw off noxious products at a height sufficiently great to ensure diffusion.

(*ii*) A chapel for Church of England patients to replace the present structure, which will have to be removed to make room for the new block for women and children.

(*iii*) A mortuary with corpse chamber, *post-mortem* room and waiting room in a small separate enclosure. It is proposed to place this building near the west gate of the hospital, that being the most retired position and the most suitable for funeral parties starting from the hospital.

(*iv*) Additional accommodation for nurses. For this purpose a new two or three-storied block can be built near the south-eastern corner of the existing nurses' quarters, to which it can be attached by means of a gangway at each floor level.

Distribution of accommodation.

27. The following table shows how the accommodation provided would be distributed among the several buildings:—

Name of Block.	Paying patients upper class.	Paying patients lower class.	Free patients.	Total.
1	2	3	4	5
Paying patients' block ...	31	...	...	31
Women and children's block ...	...	16	60	76
Male block	...	24	162	186
Obstetric block	2	2	3	7
Ward for inebriates and insanes ...	...	...	6	6
Infectious diseases block ...	...	...	30	30
Total ...	33	42	261	336

Covered ways.

28. To facilitate communication between the several buildings, it will be necessary to provide covered ways open on both sides. Carriage roads will also be needed, and walks should be arranged for the use of patients, the grounds being suitably laid out. The surface drainage of the whole area will require to be carried out effectively, so that water may not stagnate.

Drainage.

29. The Calcutta Municipality propose to lay a new main sewer along Badiapara Road with a fall southwards, and to realign the road to a width of 60 feet. The drainage of the Hospital premises might with advantage be made to flow into the new sewer. All pipes, traps, pits and chambers must be carefully arranged so as to be readily accessible and to admit of cleaning and ventilation. The whole of the water-supply should be from the filtered mains.

Dairy.

30. A carefully supervised dairy is essential, and the existing cow-shed should be removed. The Committee are disposed to recommend that a portion of the Native Lunatic Asylum compound should be given up for the purpose. A dairy on that site would be near enough to allow of proper supervision and sufficiently distant not to prove offensive.

Quarters of Superintendent and officers.

31. The Committee consider that it would be very desirable, if possible, to provide a house for the Superintendent on the site now occupied by the residence of the Deputy Superintendent of the Native Lunatic Asylum, which faces the maidan and is within a short distance of the Hospital. They further think that the resident medical officers' quarters, about half of which is now occupied by officers in no way connected with the General Hospital, should be reserved entirely for the staff, the extra quarters thus set free being allotted to junior surgeons who may be appointed to do duty at the hospital. The Committee also suggest that the two-storied building occupied by the Deputy Superintendent of the European Lunatic Asylum should be converted into quarters for the Military Assistant Surgeons and the steward; the single-storied quarters being utilized for hospital servants. This will enable a considerable saving to be effected on the allotment of Rs. 90,000 provided for this purpose in the current years' budget.

32. The cost of the proposed scheme has been roughly estimated at Rs. 22,00,000, the details of which are as follows:— Cost of scheme.

	Rs.
Paying patients' block, including kitchen and servants' quarters ...	3,94,000
Block for women and children	4,50,000
Block for men	6,80,000
Administration block	70,000
Obstetric block	50,000
Main kitchen	50,000
Gate lodge	6,000
Mortuary	15,000
Additions to nurses' quarters	30,000
Inebriates' wards	2,000
Chapel	6,000
Out-patient block	30,000
Laundry with disinfectors and destructor	60,000
Infectious diseases wards, with kitchen and out-office accommodation and separate mortuary	1,20,000
Dairy	5,000
Covered ways, compound walls and gates, laying-out grounds, &c. ..	47,000
Acquisition of land on east side	1,45.000
Residence of Superintendent	40,000
Total ...	22 00,000

The Committee venture to hope that it may be found possible to commence and complete the rebuilding of the hospital during the period of the next Provincial contract. The expenditure proposed is no doubt large; but it cannot be regarded as excessive if it is borne in mind that the greater part of it is needed to remedy defects of very long standing, most of which existed before the introduction of the system of Provincial Finance, and thus represents an aggregate of outstanding liabilities in respect of this hospital which the Government of Bengal may be said to have inherited from the Government of India.

The Committee further observe that since 1867, when Hospital Port Dues were first introduced, the owners and agents of vessels coming to Calcutta have paid in this form no less than Rs. 16,21,787,* which has been applied under the orders of Government to the support mainly of the European General Hospital and "otherwise for providing sanitary superintendence and medical aid for the shipping in the port * * * and for the seamen belonging to the vessels therein, whether such seamen are ashore or afloat.†" It would be beyond the province of the Committee to offer any opinion on the question, which has been raised in a letter addressed to them, by the Chamber of Commerce whether the Hospital Port Dues have been in all respects properly applied. But they submit that the mere fact of so large a sum being levied from one section of the mercantile community for the purpose of affording medical aid to officers and seamen of ships visiting the port may not unreasonably be held to impose upon Government at least a moral obligation to provide a higher standard of hospital accommodation than was considered suitable more than a hundred years ago, when Hospital Port Dues did not exist, and the entire cost of the hospital was borne by Government.

† Act XII of 1875, section 50.

33. The cordial acknowledgments of the Committee are due to th Secretary, Mr. Banks Gwyther, for the admirable designs annexed to t report, which are believed to be in accordance with the views of the b European authorities on the subject of hospital construction. They desire al to thank Surgeon-Captain Pilgrim, who has attended at all their meetings a has supplied much valuable information concerning the working of the prese hospital.

REPORTS ON THE PROSPECTS OF THE CROPS AND CONDITION OF THE PEOPLE IN THE PATNA, CHOTA NAGPUR, ORISSA AND RAJSHAHI DIVISIONS.

NOTIFICATION.

No. 4681Agri.—The 24th November 1896.—The following papers are published for general information.

M. FINUCANE,
Offg. Secy. to the Govt. of Bengal.

No. 4550Agri., dated Calcutta, the 18th November 1896.

From—M. FINUCANE, Esq., Offg. Secy. to the Govt. of Bengal, Revenue Dept.,
To—The Commissioner of the Patna Division.

I AM directed to acknowledge receipt of your report No. 609G., dated 11th November 1896, drawn up under section 9 of the Famine Code, and in reply to say that Sir Alexander Mackenzie considers that the report has been prepared with much care and ability, and desires to thank you for the promptness with which it has been submitted, and for the labour bestowed by you on the compilation of it.

2. I am at the same time to forward for your information the accompanying copies of a letter addressed by this Government to the Government of India on the subject of the approaching scarcity in Bengal generally, and in the Patna Division in particular, and to invite your special attention to the remarks contained in paragraphs 7, 12 to 19, 21 and 22 of that letter.

3. You will observe that a sum of Rs. 34,000 is now available in the hands of the Bengal Distress Relief Committee which was formed in Calcutta in 1888, and His Honour proposes, after consulting you at Sonepore, to ask the Committee to place at your disposal so much of the amount as may be required at present and in the immediate future for distribution in charitable relief.

No. 609G., dated Bankipore, the 11th November 1896.

From—J. A. BOURDILLON, Esq., Offg. Commissioner of the Patna Division,
To—The Secretary to the Government of Bengal, General Department.

IN continuation of my letter No. 579G. of the 23rd ultimo, I have now the honour to forward, under section 9 of the Famine Code, the following report which describes the state of affairs in the districts of the Patna Division on the 1st November 1896, and supplies the information required by the section quoted.

PART I.

INTRODUCTION.

2. After full consideration, I have decided that the time has come for declaring scarcity to be prevalent, and for submitting this report, because although there are so far no signs of distress among the mass of the population, yet grain is already at famine prices almost everywhere, and it follows that all those who have to purchase grain for their daily consumption must already be greatly straitened. I am also anxious to have all arrangements made in good time, and to place all the available information in the hands of Government long before the actual onset of distress, which must certainly be felt in greater or less degree in the course of the next few months.

3. I propose first to set forth the condition of each district as reported by the district officer, with some remarks of my own, and then to review the whole situation, with such observations and recommendations as seem appropriate. The area and population in each case are taken from the latest census pamphlets. It is to be noted that the population figures are probably below the truth, as a period of nearly five years has elapsed since the census was taken, but there is a manifest convenience in using the figures of 1891, and I have adopted them throughout. The areas under each crop are taken from the forecasts published by the Director of Land Records, and the average outturn of each crop per acre has also been obtained from him: lastly the rainfall figures in Appendix B have been compiled from a memorandum supplied by the same officer. The terms *bhadoi* and *kharif* used in the following paragraphs refer (*a*) to all the rainy season crops and (*b*) to the winter rice, sometimes

PART II.

DISTRICT REPORTS

4. PATNA.—[Area 2,682 square miles, population 1,772,509.] This district, which lies wholly to the south of the Ganges, consists of four broadly marked tracts, viz.—

(1) The deara land along the Ganges.

(2) A long and narrow strip of highland close to the bank of the Ganges, along which the East Indian Railway runs from east to west.

(3) A large tract of low land to the south of the railway and the high strip just mentioned, which is annually subject to inundation.

(4) The Bihar subdivision.

The first three areas are comprised in the Dinapore, Sadar, and Barh subdivisions. Tracts Nos. 1 and 2 grow *bhadoi* crops in the rains and *rabi* in the winter: there is little rice. Tract No. 3 produces little rice or *bhadoi*, but usually grows a magnificent crop of *rabi*. The Bihar subdivision again is divided into the hills in the south and the low country to the north: the whole subdivision is intersected with streams, and the greater part is provided with a system of reservoirs (*ahars*), some of which are filled with rain-water and natural drainage, while others are replenished by damming the rivers. An elaborate system of conduits (*pynes*) conveys the water from the rivers to the reservoirs, and again to the fields of the cultivators. Mention should also be made of the Sone Canal System, which runs for about 40 miles near the western border of the district, and irrigates in ordinary years about 40,000 acres of land, an area which has been increased during the present year to about 54,000 acres. The chief crop of the district is the *kharif*, which in an ordinary year produces 43·43 per cent. of the total food crop, 36·01 per cent. being *rabi* and 20·55 per cent *bhadoi*.

5. *Reasons for apprehending scarcity.*—The rains in the present year have been both unseasonable and deficient. They broke late, *i.e.*, at the end of June, and were heavy (the June rainfall being 7·19 inches against a normal fall of 6·24 inches). More rain followed in the first half of July, viz., 8·97 inches against an average of 11·93 inches, and some little damage was done by floods. A prolonged drought succeeded, which lasted till the middle of August, during which month 10 05 inches fell against an average of 10·48. This fall saved the *bhadoi* and enabled the raiyats to transplant the rice seedlings, though the operation was later than usual and was not completed till well into September. A third downpour occurred in the middle of September, which was about half the average, viz , 3·70 inches against 7·04. Up to this time the deficiency from the 1st of April was 7·28 inches, and not much harm would have been done had seasonable rain followed in October, but as a matter of fact not a drop has fallen since the 18th September, instead of the usual allowance of 3 25 in October, and by the end of that month the deficiency amounted to 10·53 inches or 25·53 per cent. of the average.

6. The result is that the *bhadoi* has been a short crop of 10 annas, the rice is estimated at 9 annas, and fears are entertained for the *rabi*. There is nothing in these figures to suggest scarcity in the district as a whole, and if sufficient rain falls during the cold weather months, the outturn of the *rabi* may be better than the Collector expects, although he reports that the area sown is a good deal below the average. In 1873-74 a rainfall of 1·99 inches in the first three months of the calendar year 1874 produced what was estimated at 16 annas, or a full average crop of *rabi*. The crop where sown is said to be germinating freely everywhere, much of the land has been irrigated before sowing, and many temporary wells are said to have been made.

7. But though the crop outturn is not very bad, the sudden rise of prices to famine rates introduces a grave element into the situation. A good deal of excitement was felt in the first week of October, and prices oscillated considerably, but exportation has ceased to a great extent, and prices have now steadied down. I give in the margin the prices of food-grains in Patna on the 31st October 1896 and the corresponding date last year.

	1895.	1896.
Common rice ..	18½	9
Wheat ...	18½	8½
Barley .	23	11
Gram ...	21	11
Arhar ...	20	11½

8. *Area and population likely to be affected.*—Certain parts of the district, however, are worse than the average. These are—

(*a*) The Islampur thana in the south-west of the Bihar subdivision (area 117 square miles, population 81,401).

The tract first mentioned contains a good deal of poor sandy soil. It stands high and has few wells; *bhadoi* is little grown; the rice has been a failure, amounting only to 4 annas, and the absence of rain greatly jeopardises the *rabi* crops. The second tract is also high: its *bhadoi* has been poor, and it depends chiefly on its *rabi*. Further particulars are not given; they will be supplied in a later report. On the whole it may be said that a rural population of about 600,000 will be earliest affected by the failure of the crops besides the urban population of the district, since it is upon them that the stress of high prices falls most severely. Their number under Mr. O'Donnell's average of 6·5 per cent. on the whole population comes to 115,263. The total is 715,263, and this is the population which we may expect to be affected within the next few months, whatever the result of the *rabi* may be. But it is not to be supposed that the whole will require aid. It is stated in the Report of the Famine Commission, Part III, pages 106, 107, that in the famine of 1868-69 in the North-Western Provinces, the largest number that Government ever had to relieve was 13 per cent. of the population for a short time, and 3·9 per cent. for a continuance, and that was only in one exceptional district; in the same report, Part I page 35, it is stated that in Bengal in 1873-74 the highest number in receipt of direct relief at any one time was 20 per cent., and the average about 10 per cent. for nine months. Looking at these figures and remembering that distress is always less acute at first, it seems to me that an estimate of 5 per cent. on the total would be a liberal estimate of the numbers to be provided for during the next few months, partly by charitable relief and partly on relief works. The nett result is 35·763.

9. *Communications.*—As regards communications, the district is most favourably situated: the East Indian Railway runs through its northern thanas from end to end, the Patna-Gaya Railway intersects the Sadar subdivision from north to south, the Sone Canal skirts the whole of its western border, and the Ganges, with a large boat traffic, bounds it on the north. Besides all this, it is well supplied with roads, the mileage being 1,212 on the 31st March 1896. Islampur is connected with Gaya, and with Fatuha on the East Indian Railway (28 miles) by a first class district road. In the matter of cross-roads it is rather badly off, but every village in the thana, and indeed in the whole district, can be reached by pack-bullocks, which are numerous and largely used.

10. *Grain stocks.*—In the matter of grain stocks no very definite information is available, but the Collector reports that they are said to be ample: the *bhaoli* system prevails largely over the whole of the south of the district, and it is believed that some zamindars have considerable stocks, while every raiyat has something. Exportation is said to have ceased. This question will be more fully discussed in subsequent reports.

11. *Sources of food supply.*—The remarks in paragraph 8 above will show that grain can be imported by rail, road, canal and river, and can be distributed by pack-bullocks everywhere. There are many large bazaars and marts, and Patna itself is a great grain emporium. Probably no district in the division offers so many facilities for private trade or is so well protected against exhaustion.

12. *Proposed measures of relief.*—So far the Collector is of opinion that the necessity of relief works has not been proved. Early in October, when the sudden rise of prices caused by the assured failure of the Hathiya rains, and the exportation of grain to the North-Western Provinces, caused a panic in the large towns, test relief works were opened at Patna and in various places in the north of the district, but these were not largely attended and were soon closed. The Collector now proposes to open test works once more from the 16th instant at eight places in the north of the district, and also one at Islampur. These will afford employment to 1,676 persons for 90 days. If it is found that work is really needed, they will be promptly expanded and others started. Meanwhile the scheme of works submitted annually under rule 5 of the Famine Code is being carefully revised, and work will be started as the need arises. The Collector at my request is mapping out the whole district into relief circles, which will, however, not be manned till the proper time comes. Private Committees for the relief of the indigent have been formed in Patna, and in all the chief centres in the north of the district, and loans have been offered to zamindars for the construction and repair of agricultural works, as well as to cultivators for temporary wells.

13. *Estimate of expenditure.*—At this stage it seems absolutely impossible to form any definite estimate of what will be required, as so much depends on

expenditure. By this means they have now available a sum of Rs. 25,000, including the estimated receipts up to the end of December, and a further sum of Rs. 25,000 will be available during the first three months of 1897. The Collector's letter, however, is not quite clear on this point, and these figures will probably be modified. From the commencement of the financial year 1897-98, the District Board expect a large increase of revenue. An application is being separately made for an increase to the grant for advances under the Agricultural Loans Act, and the Land Improvement Act.

14. *Remissions or suspension of revenue.*—Nothing of the sort is required at present.

15. *Additional establishment.*—None is at present needed, but the Collector expects, if scarcity increases, that he will require three or four officers to take charge of circles, and some increase will be inevitable in the number of kanungos and ministerial officers.

16. *Conclusion.*—The condition of the district gives cause for no immediate anxiety. The first need here, as elsewhere, is a careful investigation of the state of towns and large villages, where the unusually high price of grain will first be felt by the non-agricultural population. I am drawing the special attention of the district officer to this matter.

17. GAYA.—[Area 4,712 square miles, population 2,188,343.] The district is very diverse in character: the north and west partake of the character of the Gangetic plain, while the south is hilly and jungly, and the Nawada subdivision on the east combines both those characteristics. The district is intersected with numerous streams flowing from the Chota Nagpur plateau, and these are largely used for the conservation of water in reservoirs, whence it is distributed by channels. This system prevails over nearly the whole district, except parts of Jahanabad and the northern areas of Aurangabad. The district is bounded on the west by the Sone river and the higher reaches of the Patna and Gaya Canal, which irrigates in ordinary years about 40,000 acres, and in the present year has irrigated as much as 53,000. The chief crop of the district, as might be excepted, is the *kharif*; for out of the whole food crop usually produced in an ordinary year, 65·89 per cent. is rice, 24·47 per cent. is *rabi*, and *bhadoi* is represented by only 9·66 per cent. of the total.

18. *Reasons for apprehending scarcity.*—As in the case of Patna, the Collector of Gaya reports that though the crops are not bad on the whole, the high prices ruling in the bazars justify him in saying that scarcity prevails in his district to some extent. Here as in Patna the rainfall was scanty, and ceased early. During April and May only 0·27 of an inch fell, against an average of 2·02. In June the rain was late and heavy, being 8·34 inches against an average of 5·63. Early in July another downpour followed of 10·44 inches, the total up to date being then only $\frac{8}{10}$ths of an inch below the average. A long drought succeeded, which was followed by 10·91 inches in August, against an average of 11·73, and after another long break, the middle of September gave another fall of 3·93 inches instead of 6·79. No rain has fallen since, and the deficiency to the end of October is 7·34 inches, or 17·8 per cent. These heavy falls alternating with long droughts did less harm in Gaya than they would have done elsewhere, for the water was carefully stored and used as required. Floods caused by heavy rain on the Chota Nagpur plateau did some damage in the Nawadah subdivision at the end of September.

19. The result of these vagaries in the rainfall is an outturn which is estimated by the Collector at 12 annas for the *bhadoi*, 8 annas for the *kharif*, and 7 annas for the *rabi* crop. The whole outturn of the district in an ordinary year is estimated at 2,44,01,000 maunds, and the equivalent of the above proportions, if the usual area has been sown this year, is as follows:—*Bhadoi* 17,88,000 maunds, *kharif* 81,22,000 maunds, and *rabi* 44,79,000 maunds. The total is 1,43,89,000 maunds, which corresponds to 68·96 per cent. of an average crop.

20. These figures, as in Patna, give no cause for present anxiety, but that is unfortunately supplied, as indeed it is throughout the Division, by the early rise of prices to famine rates. I give in the margin the prices quoted at the Sadar station on the 31st October last, and the price of common rice on the corresponding

	1895.	1896.
Common rice ...	14	8·4
Wheat ...	...	8
Barley ...	...	11
Makai ...	...	11·2
Gram ...	...	10·2
Arhar ...	...	10·4

21. It is clear, as Mr. Savage observes, that "persons of the wage-earning class who receive their wages in money must find their means of livelihood seriously curtailed." To these I would add all persons on fixed incomes and all those who depend on charity; all those in fact catalogued in paragraph 109 of the Famine Commission Report, Part I. But here as elsewhere work in the fields is still plentiful, and as this is always paid chiefly in coarse grain, the daily labourer does not at present feel the high prices any more than the agriculturist who is living on his own stocks. There is no increase either in vagrancy or crime, and there are no signs of emaciation or distress anywhere.

22. *Area and population likely to be affected.*—But while the above paragraphs supply a satisfactory report on the general condition of the district, there are spots where the people are not so well off, because the rainfall has been scanty and the system of reservoirs is incomplete, or the land too high, so that there has been a more or less complete failure of the kharif crop. Three such tracts are marked by the Collector and are described as follows:—

(*a*) the northern portion of the Jahanabad subdivision round the subdivisional head-quarters;

(*b*) the portion of the Sherghatti thana which lies to the south of the Grand Trunk Road; and

(*c*) A tract in the north-east of the Aurangabad subdivision between Aurangabad and Goh.

In the former of these tracts the area is about 100 square miles, and the population 65,000. The *kharif* crop here is placed at 2 annas only. In the second tract the area is much larger, being about 350 square miles, but it is hilly and is thinly populated, and the population is about 72,000. The crop here is expected to be about the same, *i.e.*, 2 annas. The third tract comprises an area of about 150 square miles with a population of 63,000, and here the rice is estimated at 5 annas. I also add the urban population, which at 6·5 per cent. of the whole population of the district comes to 139,291. The whole population to be first affected, therefore, comes to 339,291, and the area to 600 square miles. Taking 5 per cent. of the above total the number for whom some sort of relief may be necessary during the next few months is 16,645.

23. *Communications.*—The Gaya district itself is well supplied with communications. The Patna-Gaya Railway runs from Gaya to its northern boundary, about 40 miles; the Grand Trunk Road runs along through its southern thanas for about 70 miles; the Patna-Gaya canal passes along its western boundary for about 40 miles; and the mileage of roads on the 31st March 1896 was as follows:—district roads 849 miles, village roads 554 miles, total 1,403 miles. In the affected tracts also communication is ample. Through the Jahanabad area runs the Patna-Gaya Railway, and from Jahanabad itself unmetalled roads, passable at all times of the year, though heavy in the rains, radiate in all directions. To the Sherghatti tract there are two good roads from Gaya, and the Grand Trunk Road runs along its northern limit, but in the tract itself there is only one road which the Collector proposes to raise as a relief work. To and through the Aurangabad tract runs a good unmetalled road fully bridged except at the big rivers, and from the centre of the tract (Rafigunge) radiate two fair-weather roads—one northward to Goh and the other westward to Okri. Means of communication are therefore ample and good till rain falls.

24. *Grain-stocks.*—The Collector reports that every zamindar and every well-to-do raiyat has his *golah*. Exportation has stopped, and his information is that stocks are now everywhere held up partly for consumption and partly for sale when prices rise higher still. This was the experience of 1873-74, when in a year very similar to the present the stocks of the people enabled them to maintain themselves till the *rabi* was reaped, and again till the *bhadoi* harvest came in. A lakh and a half of maunds of grain were forced upon the Gaya officials, of whom I was one, but of this amount only 11,000 maunds were expended on relief in various forms, 50,000 maunds were sold, and the remainder was distributed to other districts, or returned to Patna.

25. *Sources of food-supply.*—Mr. Savage says that if a fair *rabi* crop is reaped, the grain, together with that of the *kharif*, added to the stocks already in hand, will enable the district to support itself without special importation. The matter will be further examined below. If importation has to be resorted to, it will no doubt be carried out by private enterprise along the lines of communication indicated above. Jahanabad, Sherghatti and Rafigunge

26. *Proposed measures of relief.*—The Collector reports that exhaustive enquiries in every part of the district have satisfied him that there is no demand whatever for relief works at present, and in this view I entirely concur. There is plenty of field work to be had, which will carry on the labouring population till the South Bihar Railway breaks ground along a line from Baroon to Gaya, which will pass through Rafigunge, and will supply work for 10,000 able-bodied men for at least six months. Should the necessity for other relief works arise, however, the Collector has arranged to open as test works the various feeder roads to the railway, which will provide for the Rafigunge tract, and in the Sherghatti and Jahanabad tracts to start work on the Sherghatti-Imamgunge and Jahanabad-Dharawat roads, which will supply all the work that is needed. If, contrary to all expectations, distress deepens, other railway feeder roads will be opened, and the scheme submitted under section 5 of the Famine Code will be utilised. This programme seems to me to be fully sufficient. In anticipation of their being required at some future date, the Collector has mapped out his district into 14 relief circles, each circle comprising a thana, but he has so far only appointed circle officers to the three circles in which distress may possibly occur: moreover, they are at present engaged on famine work in addition to their ordinary duties.

27. *Estimate of expenditure.*—The Gaya District Board has as requested revised its budgets for 1896-97 and 1897-98. For the current year it has diverted Rs. 15,850 from various masonry works, and will also have at its disposal the estimated closing balance of Rs. 36,000, or Rs. 51,850 in all. For expenditure, if need be, in the early months of 1897-98 it has set aside Rs. 60,000, so that it has practically provided more than a lakh of rupees to meet the demands of the next eight or nine months. I consider the sum ample for the present at any rate.

28. *Conclusion.*—The condition of the Gaya district is the best in the Division. The Nawada subdivision seems to be absolutely safe, and the doubtful areas in the other subdivisions are small and easily accessible. Here as elsewhere prices are already very high, and certain classes will feel the pinch this year much earlier than they have in former years of scarcity. As regards the agricultural population there is little to fear. The daily labourers will find employment on the South Bihar Railway, which runs right through the district, while it is almost certain the zamindars and the better class of cultivators will have sufficient stocks to carry them on till the *bhadoi* crop of 1897. The *bhaoli* system which prevails over so large a portion of the district directly tends to the hoarding of grain, and, in a year like the present, both landlord and tenant will reap large profits from the sale of surplus grain. For these reasons I have no fears for Gaya.

29. SHAHABAD.—[Area 4,375 square miles, population 2,063,927.] Like the district of Gaya the large district of Shahabad is divided into clearly defined tracts. In the south there is a large area of hill and forest thinly inhabited, while the central and northern portions of the district are fully cultivated, and carry a numerous population. On the north the district is bounded by the Ganges, and on the east by the Sone, while the Arrah Canal running along the bank of that river irrigates 475,000 acres with a perfect net-work of distributaries and village channels. Its operations cover the greater part of the Sasaram subdivision, all the south of the Buxar subdivision, and much of the Sadar subdivision, but only a small corner of the Bhabua subdivision is reached. The main crop of the district is the *rabi*; for out of the whole outturn of the district in ordinary years 48·11 per cent. is *rabi*, 44·27 per cent. is *kharif*, and only 7·60 per cent. *bhadoi*. Consequently the failure or success of the *bhadoi* is, comparatively speaking, a matter of little moment. The *kharif* is grown mostly in the neighbourhood of the canals and in the south of the district, while the Sadar subdivision, and the high land to the north along which the line of the East Indian Railway is carried, is chiefly devoted to *rabi*.

30. *Reasons for apprehending scarcity.*—The rainfall in the Shahabad district was more deficient than in either Gaya or Patna, and was equally capricious, but the feature of the season was fair rain up till the end of August, and then a great deficiency in September. Here as in other Bihar districts the monsoon was very late: there was heavy rain early in July, then a long break till the middle of August, and a second lasting till the middle of September: but whereas up to the end of August the deficiency was only

of 7·07. No rain has fallen since the middle of that month, and the total deficiency to the end of October is 16·30, which is equivalent to 25·84 per cent. of the normal fall. This explains at once why the estimated outturn of the crops is as low as the Collector anticipates in spite of the efforts of the Sone Canal officers.

31. The crops resulting from these meteorological conditions are estimated by the Collector as follows:—*Bhadoi* 7½ annas, *kharif* 3 annas, and *rabi* 11½ annas. In 1873-74, with exactly similar conditions during August, September, and October, the *kharif* was found to be only a 2-anna crop and the *bhadoi* 4 annas; but it is to be remembered that in that year the canals were not yet at work, and that damage was done by an abnormal fall of 16·79 inches in July. The whole outturn of the district in an ordinary year is 2,97,73,000 maunds, and the above estimates expressed in maunds and calculated on the areas cultivated, with the *rabi* estimate raised to 12 annas, work out as follows:—*Bhadoi* 9,29,000; *kharif* 24,06,000, *rabi* 1,07,43,000, giving a total of 1,40,78,000 maunds as the produce of the district, which is equivalent to 47·28 per cent. of the produce of an ordinary year.

32. These figures, as has already been remarked in the case of Patna and Gaya, need cause no immediate anxiety for the district as a whole, but unhappily here as elsewhere famine prices have already appeared, and one part of the district is a good deal worse than the rest. As has been reported in a previous letter, prices rose very rapidly at the beginning of October, and a grain riot was apprehended. Exportation, which had been very considerable from Arrah and Buxar was temporarily stopped at Arrah, but has since been carried on till it ceased from natural causes, and prices have now settled down. I give in the margin for convenience of reference the prices of the principal food-grains at Arrah on the 1st November 1896 and on the corresponding day in 1895.

	1895.	1896.
Common rice ..	13	9
Wheat ...	13	8½
Gram .	13	11
Barley		11
Makai		12
Marua . .		15

33. *Area and population likely to be affected.*—The figures just quoted show clearly enough that the urban population and all those who have fixed incomes or are paid in cash must be greatly pinched. Following the calculation adopted in the case of other districts, I take the non-agricultural population likely to be affected to be 134,155. Besides these there is the population of the Bhabua subdivision, in which is the area referred to above as being in worse case than the rest of the district. The area of this tract is 1,301 square miles, and the population 344,902. The Collector reports that the whole of them are affected, and I accept the statement in the sense that this area will first require relief works. Five per cent. of the sum of these two totals is 23,952.

34. *Communications.*—The Shahabad district is not so well off in this respect as the other two districts of South Bihar, but there is no great cause for complaint. The Ganges bounds it on the north, and the East Indian Railway runs along its northern boundary for 60 miles. The Arrah Canal leaving the Sone at Dehree runs up to Arrah (50 miles), while other large branches diverge to Buxar and elsewhere. Lastly, the Grand Trunk Road traverses it from south-east to north-west, and the whole district is well supplied with District Board and village roads, the mileage of which reaches a total of 1,855 miles. One-third of the area of the Bhabua subdivision, which is the affected tract, is covered with hill and forest and very thinly populated; the remainder is well supplied with communications. Besides the Grand Trunk Road, which runs through the centre of it for about 30 miles, there are 3 metalled roads and 35 unmetalled roads. All these roads are passable until the rains set in, and some of them can be used even after that. Many of them will be raised and levelled as relief works during the current season if the need arises.

35. *Grain-stocks.*—As elsewhere the Collector reports that grain-stocks are said to be abundant, and I have every reason to believe that he is right. Sales to brokers have stopped, and not only the dealers, but the zamindars and cultivators are said to be holding up their stocks for consumption or for sale at higher prices later in the year. There is a considerable *bhauli* area in this district on the south and west, and hence, as stated in paragraph 28 above, it is believed that the habit of hoarding grain is well established and largely followed.

36. *Sources of food-supply.*—Should necessity arise, grain can be poured into the district by all the means of communication noted above, and into the Bhabua subdivision from Zamania on the East Indian Railway (30 miles), from Dehree on the canal, through Sasaram, up the Grand Trunk Road, and by many cross-country roads from local marts in the Sadar and Sasaram subdivisions where grain is cheaper and more plentiful. Meanwhile, the Collector has arranged with two important local grain-dealers to open markets near the test relief works to be mentioned in the next paragraph. These markets are reported to be in full swing and will meet all the reqirements of the case for the present.

37. *Proposed measures of relief.*—In paragraph 12 of my letter of the 23rd October, I have already reported that test relief works were required in the south and east of the Bhabua subdivision. In accordance with my request, the Collector proceeded to the subdivisional head-quarters, and remained there till all arrangements were completed. The work, which consists of repairing, raising and levelling existing unmetalled roads, has been commenced in five places, viz.—

(1) Bhabua to Jahanabad (7 miles east).
(2) Bhabua to the Karamnasa river (20 miles west and north-west).
(3) Durgauti to Hata (12 miles south) (Durgauti is on the Grand Trunk Road).
(4) Mahania to Panjraon (17 miles north and north-west).
(5) Bhagwanpur to Rajghat (12 miles south).

Work was commenced on the 21st October, and a return in Form 19 of the Famine Code is appended, showing the numbers employed and other particulars. The daily figures are given in the margin: on the first day only one work was opened: there were two open on the 22nd and 23rd, and after that date three were open. The work should not have remained open on the 25th, Sunday, and the sudden fall on the 29th and 31st requires explanation, which has been asked for. Mr. Egerton commenced by paying rates calculated under section 103 of the Famine Code, and the task set is that calculated by Mr. King (*vide* Appendix IV, page 80 of the Famine Code). A man and woman working together have to cut 100 cubic feet of earth with a 50-foot lead, the woman doing the carrying and a child assisting. The rate of wage in Government pice is man 6, woman 5, big child 3. This rate was based on a price-current of 11 seers to the rupee, but rice was selling at Bhabua on the 2nd instant at 7½ seers. Mr. Egerton reported that this rate worked out to Rs. 2-4 per 1,000 cubic feet, whereas the District Board rate is Re. 1-12 for piece-work, and the Railway authorities were offering only Re. 1-8, which has since been raised to Re. 1-12. I accordingly telegraphed to him to reduce his rate and to introduce calculations under section 104, though it is to be observed that the rise in price has considerably reduced the value of the money wage. These changes have been carried out since the 1st November, and the District Engineer, Mr. Edwards, who was on leave when the work was first opened, has returned and proceeded to Bhabua. The labourers are reported to be in good case, but there are a good number of B class men, as the annexed statement (Appendix A) will show. Further particulars will be given in my next report; meanwhile the Lieutenant-Governor may rest assured that these relief works will in no case be allowed to compete with those of the Moghalserai-Gaya Railway.

38. This work, which will supply many thousands of labourers with employment all through the cold weather, forms a splendid natural relief work, and will be of the greatest assistance to the people in the Bhabua and Sasaram subdivisions. It runs from Khajura on the Karamnasa to Dehree on the Sone, following generally the line of the Grand Trunk Road. I have been in telegraphic communication with the Collector and the Resident Engineer, and have arranged that without waiting for the usual formalities work is to be started in several places, where this can be done without objection. This has already been done, and I fully expect that all the professional and able-bodied labourers will be drawn away from our test works and find employment on the railway.

39. The Collector has increased the allotment of the Subdivisional Officer, Bhabua, for advances, and loans for wells are being freely given. A Deputy Collector and a Khas Mahal Tahsildar have been deputed to assist the Subdivisional Officer. Mr. Egerton has also applied for sanction to start some agricultural improvements in the Government estates in the Bhabua subdivision, and has placed Rs. 500 in the hands of the District Superintendent of Police for use under section 12 of the Code.

40. *Estimate of Expenditure.*—The Collector finds that he cannot at present make any confident estimate of expenditure, and I agree with him. It is impossible at this moment to estimate even the numbers who will seek our relief works, as the effect of the opening of the railway work has yet to be noted. By revision of the District Board budget Rs. 20,000 have been saved for the current year, besides the estimated closing balance of about the same sum. For the early months of 1897-98 the Board has provided Rs. 55,000 out of the Civil Works budget without touching the other heads. These sums seem quite sufficient for the present. The Collector has addressed all the leading zamindars of the district on the subject of organising private charity and giving advances and remissions to their raiyats. No response has been received so far.

41. *Suspension of Government revenue.*—This is not recommended at present, but, with my sanction, the Collector has for the time being suspended the collection of rents from the raiyats in the Government estates in Bhabua, and has postponed all certificates except those which would be time-barred by the operation. These latter will be carefully looked into one by one.

42. *Additional establishment.*—No confident estimate can be given, but the Collector has been a good deal hampered by the transfer of two Deputy Collectors and a Sub-Deputy Collector. If settlement operations in Bihar are suspended some of these should be posted to the district again; meanwhile the services of Mr. Ryan, Assistant District Superintendent, will be utilised in both the Sasaram and Bhabua subdivisions.

43. *Conclusion.*—With a good *rabi* crop Shahabad will do well enough. The Bhabua subdivision will require to be carefully watched, but I expect great things from the commencement of the Moghalserai-Gaya Railway.

44. SARAN.—[Area 2,651 square miles, population 2,466,065.] The Saran district is the most densely populated and the most closely cultivated district in the Patna Division. It contains practically no waste land, and is a fertile *doab* of rich alluvial soil washed on three sides by the Gogra, the Ganges, and the Gandak. It possesses a so-called system of canals which are of little practical value, but its surface is pitted with innumerable wells, and it is cultivated by the most adroit agriculturists in the whole of Bihar. Unlike other districts which depend on one, or perhaps two, harvests, and stand or fall by them, the crops of Saran are almost equally divided among the three great harvests of the year, so that it is practically impossible for it to lose its whole crop. The area cultivated with food-crops in an ordinary year is appropriated as follows:—*Bhadoi* 37·5 per cent., *kharif* 25·5 per cent., and *rabi* 37·4 per cent., while the normal outturn is thus divided:—*Bhadoi* 31·5 per cent., *kharif* 30·11 per cent., and *rabi* 38·38 per cent.

45. *Reasons for apprehending scarcity.*—The rainfall in Saran during the current year has been unusually short, the total according to the published returns being only 22·32 from 1st April to 1st November in place of a normal fall of 42·80. The rains commenced late in June and from the first were insufficient, the monsoon current which came up from the east seeming to be exhausted before it reached Saran, and two long periods of drought in August and September occurred here also as elsewhere. In June the fall was 2·68 against 6·42; in July the fall was 3½ inches short, and in August the deficiency was an inch and a half; but worse was to come, for in September only 1·28 inches fell against an average of 7·45, and none has fallen since the middle of that month. Thus the three asterisms of the *Hathiya*, *Chitra*, and *Srivati*, which are the most important in the whole agricultural year, have passed without a drop of rain in this district. The total deficiency is equivalent to 47·85 of the normal fall.

46. A glance at the above figures will show that they must mean a considerable failure of the *bhadoi*, a great deficiency of the *kharif*, and very poor prospects for the *rabi*. Accordingly the Collector's estimate for the two former

is as follows:—*Bhadoi* 6 annas and *kharif* 8 annas, while he hazards no speculation for the *rabi*, since so much depends on the rainfall during the current month, and again in the first three months of 1897. In 1873-74 the total rainfall from 1st April to 1st November was half as much again as in the present year, viz., 32·02 inches, but the conditions in September and October were practically the same: if we may assume that the fate of the *rabi* will be the same as in that year, then we may expect an 8-anna crop. Taking this as my standpoint and expressing the result in maunds, the outturn will be as follows, viz.:—*Bhadoi* 21,17,000, *kharif* 10,74,000, and *rabi* 34,39,000—total 66,30,000. In an ordinary year the figures are—*Bhadoi* 56,45,000, *kharif* 53,95,000, and *rabi* 68,78,000—total 1,79,18,000 maunds. The total outturn will therefore be only 37 per cent. of that in an average year.

47. These figures suggest a serious failure of the food-supply of the district, but for reasons which I will explain below, they would give me little concern but for the fact that the situation is complicated by the extraordinary high price of grain. This has been caused here, as elsewhere, by exportation, the natural result of improved communications and of greater distress elsewhere. The figures in the margin show the price of the ordinary grains on the 1st November 1896 and the same date in 1895. Obviously here as elsewhere, all but those who are paid in grain, or who live on their own stocks, must be much pinched already, but the Collector reports that all persons are unanimous in saying that no general inconvenience need be expected till after the beginning of December, since the *bhadoi* crop is still in hand, and there is ample employment available for cultivators and field labourers in the irrigation and preparation of lands for the *rabi* crop.

Marua ...	...	14
Wheat ...	...	8·8
Gram ...	...	11

48. *Area and population likely to be affected.*—Bearing the above considerations in mind, the Collector has reported that the whole district will be affected. Strictly speaking, this is true, but I do not think that it was the intention of the framers of the Famine Code that the expression should be taken so literally, and I prefer to confine the estimate of distress to the urban population and that of certain tracts where the crops have been particularly bad. These tracts are the thanas of Mirganj, Gopalganj, and Darauli, the gross area of which is 1,046 square miles, and their population 360,670, but I cannot think that the whole of these thanas are in bad case, and we shall, I think, be near the truth if we divide the figures by 2. The urban population taken at 2·9 per cent., Mr. O'Donnell's ascertained ratio for North Bihar, comes to 71,515, and if we add this total to half that of the abovenamed thanas, we get a grand total of 501,850 persons who are likely to be the earliest affected. Five per cent. of this total gives 25,092 persons who may require relief during the next few months.

49. *Communications.*—Saran is amply supplied with means of communication. On three sides it has the great waterways of the Gogra, the Ganges, and the Gandak. The Bengal and North-Western Railway traverses it for 84 miles from south-east to north-west, and it possesses a more complete reticulation of roads than any other district in Bihar. There are 66 main roads with a total length of 976 miles (of which 118 are metalled), and besides this 470 so-called village roads with a mileage of 1,705, many of which are of great importance. All these roads can be used with effect till the rain falls, and many of them can be used throughout the year. The tracts likely to be first affected are well supplied with roads, and pack-bullocks are numerous and good. The railway runs past the northern boundary of the Darauli thana, and from the important station of Siwan grain can be easily and rapidly transported to any part of Mirganj and Gopalganj.

50. *Grain-stocks.*—The Collector of Saran is no more able to give a confident opinion on this point than his brother officers. He has ordered detailed enquiries to be made, and in the meantime reports that there are said to be sufficient quantities in hand for present needs. In this opinion I fully concur, and I would go further and say that I have no doubt that however high prices may rise, Saran will always have grain for those who have the money to buy it.

51. My reasons for this belief are many. In the first place the Saran raiyat is notoriously capable, and he may be trusted, before any man in Bihar, to keep by him what he considers a fair supply of grain. But even in

ordinary years this supply is not nearly enough to feed the whole of the teeming population of Saran, and the result is that there is always a large importation of food-grains. Thus it follows that the habit of importation is of old standing, and all that is necessary—provided that grain can be procured elsewhere at a remunerative price—is for the dealer to extend his operations: there is no question of establishing a new trade, and development is all that is required. Moreover, it is particularly noted in the accounts of the relief operations of 1873-74 that Saran was preserved by the extraordinary activity of its private trade. Lastly, it is probable that more money is poured into Saran than into any other district in the Division. The average annual payments of the Opium Department are very large, as are the sums paid out in the cultivation and manufacture of indigo, while lastly the vast numbers of Saran emigrants remit and bring home sums of money, which those who are unacquainted with the district find it difficult to accept. In a memorandum which was published in the *Calcutta Gazette* of the 10th December 1890, I pointed out that the value of money-orders paid in Saran from other districts, which were nearly all in small sums, and almost certainly family remittances, was nearly 10½ lakhs of rupees, and it is believed that each emigrant brings back twice as much as he sends home. In 1893-94, according to Mr. Slack, the Collector, the amount so paid was Rs. 13,33,450, and in 1894-95 it was Rs. 16,42,900; a very moderate estimate would therefore place the amount annually sent and brought home by Saran emigrants at 30 lakhs of rupees every year.

52. *Sources of food-supply.*—The district generally can be easily and effectively supplied by rail and river, and what has been said above in respect of communications will show that internal distribution is easy. These remarks apply to the affected tracts equally with the rest of the district. Revilganj on the Gogra, 7 miles from Chapra, is a famous grain mart, and is now connected with the Bengal and North-Western Railway.

53. *Proposed measures of relief.*—Mr. Earle has gone very fully into this subject. After consulting the District Board he has decided to open experimentally, under the Famine Code, a few small test works which comprise the improvement of three roads in the Gopalganj subdivision and the construction of a new road in the Siwan subdivision, across the only part of the Darauli thana which is not yet completely supplied. It is not expected that the experiment will prove the necessity of opening regular relief works, but should this be so, a second list has been prepared to which effect can be given at once Another work proposed is the quarrying of *kankar* for a two or three years supply: others of a less practical character it is unnecessary to mention. The authorized programme of relief works includes works under Public Works agency of which the cost is estimated at Rs. 80,722, but sanction to these has not been received: it would be well if this could be accorded without delay. Lastly, the authorities of the Bengal and North-Western Railway report that they are prepared to spend Rs. 30,000 on earthwork in the Saran district, partly in constructing the line from Revilganj to Manjhi (seven miles), and partly in petty works. In conclusion, as the Lieutenant-Governor is well aware, the Saran Canals have been thrown open, and every effort is being made to send as much water down them as possible into one of the canals, viz., the river Dolia. Some water passed as early as the first week of this month.

54. No meetings for collecting subscriptions or organising charitable relief are spoken of, but there is no doubt that these will be called in due course. The late Maharaja of Hatwah expressed his intention of undertaking the assistance of the raiyats throughout his estates, and the Court of Wards will doubtless do what is needed.

55. *Estimate of expenditure.*—Mr. Earle hesitates to offer any definite estimate of expenditure, as the magnitude of the crisis is still a matter of pure speculation; but the District Board budget has been pruned down in accordance with the principles of the Famine Code and the instructions of Government, so as to provide an allotment of Rs. 78,000 in the current year, including the estimated closing balance, and arrangements have been made to make available Rs. 80,000 out of the budget of 1897-98 in the first few months of that year. The provision is ample for the present.

56. *Conclusion.*—For all the reasons stated above, I consider that Saran is in no real danger at present. The urban and non-agricultural population here, as everywhere, will feel the pressure of high prices, and it is to them that attention must first be turned; but remembering the fact that the district grows three crops in something like equal proportion, that its agriculturists are resourceful and adroit above the general average, that the supply and distribution of food-grains in almost any quantity over its numerous roads is well understood, and lastly, that an unusually large number of emigrants has left the district this year at an unusually early date, so that not only will there be fewer mouths to feed but more money than usual to be sent home this year, I feel no anxiety for Saran, except in the improbable event of a total failure of the *rabi*.

57. CHAMPARAN.—[Area 3,531 square miles, population 1,859,465.] The Champaran district is the westernmost of those north of the Ganges, and has all the characteristics of a sub-Himalayan tract. It is bounded on the west (with the exception of one outlying thana) by the river Gandak, on the north by the Nepal frontier, and on the south and east by the Muzaffarpur district. The eastern and southern portions are rich and fertile, but its northern and western thanas contain a large proportion of hill and jungle, and are thinly populated: the climate is humid, lakes and streams abound, and the normal rainfall (49·85 inches) is higher than that of any other district in the Division. The chief crops of the district are the *bhadoi* and *kharif*, and the *rabi* is of comparatively little importance. Out of the area cultivated in an ordinary year, 41 per cent. is devoted to *bhadoi*, 39 per cent. to *kharif*, and 19·9 per cent. to *rabi*. In the matter of outturn these proportions are somewhat varied, for the *kharif* stands at 43·92 per cent., *bhadoi* at 35·04 per cent., and *rabi* at 21·02.

58. *Reasons for apprehending scarcity.*—The rainfall at Motihari, the head-quarters station of the district, was of much the same character as in other districts of the Division. The monsoon commenced late (25th June), and was 4 inches below the average of that month. In July there was not much to complain of, but in August the deficiency was 2½ inches, and the total deficit up to that time was 9·47 inches. This was bad enough, but the September rainfall was even more disappointing. This district usually receives 9·30 inches of rain in September and 3·54 in October—total 12·84, but in the present year there fell only 2·35 inches in September, of which almost all fell in the first week. No rain at all fell in October. To this cause principally, and also to the long droughts from the middle of July to the middle of August, and again from the middle of August to the beginning of September, is to be attributed the bad outturn of the *bhadoi* and *kharif* crops and the poor prospects of the *rabi*. The total deficiency of the year is 19·96 inches, or 41·67 per cent. In this respect Champaran stands second only to Saran. The Collector estimates the *bhadoi* at about 8 and the *kharif* at 3 annas, and has made no estimate of the *rabi* outturn yet, but the unusually early cessation of the rains and the prevalence of west winds give cause for serious apprehension. In the north of the district a good deal of irrigation is done from hill streams which are dammed for the purpose, but in the south of the district irrigation is not practised. Mr. Macpherson reports that *rabi* sowing can without disadvantage be postponed till the 20th November, if a good shower falls before that time. At present there are no signs of such an event, and the chances against it are very great.

59. In Statement D appended to this report I have calculated that on the Collector's first estimate of 8½ annas for the *bhadoi* and 3½ annas for the *kharif*, the outturn of these crops in Champaran will be 36,66,000 maunds and 15,31,000 maunds, respectively, as against a normal outturn of 67,52,000 maunds of *bhadoi* and 84,63,000 maunds of *kharif*. The totals are 51,97,000 and 1,52,15,000, which give an outturn of only 34·15 per cent. on the normal food-crop. If, as has been done elsewhere in the report, we assume that the rabi crop will be much what it was in 1874, viz., 8 annas, then the whole outturn will be 72,77,000 maunds against an average of 1,92,66,000, or only 37·48 of the ordinary outturn of the district.

60. Moreover, the Collector reports that prices are high, as elsewhere, and that the non-agricultural population and those who are not paid in grain, or who have no stocks of their own, are already beginning to feel the effect of

the rise. Mr Macpherson reports that in Champaran the daily labourers are begining to be in want. The failure of the rain means that the area sown with *rabi* will be contracted, and therefore the demand for field labour: in other districts the active irrigation which is going on makes up for this want, but, as has been stated above, over the greater part of Champaran irrigation is not in vogue and the labourers have little or nothing to do. He also adds that two-thirds of the raiyati holdings in representative villages prove to be less than 3 acres in extent, so that most of the cultivators are little better off than the daily labourers. The figures in the margin show the present actual price of the common food-grains at Motihari as compared with their average price in an ordinary year.

	1896.	Average.
Common rice ...	10	17
Wheat	9	13½
Barley	12½	21½
Maize	12½	24½
Gram	12	18½

Grain has been largely exported from the district of late, but this is believed to have ceased as the holders of grain have now parted with their surplus stock. Prices will probably now remain steady or fluctuate but slowly. The subject will be mentioned again below.

61. *Area and population likely to be affected.*—Obviously all parts of the district are not inconvenienced to the same extent, and the Collector has been at great pains to work out in detail of areas the extent to which each is likely to be distressed; and he has illustrated his report with a map which I will submit with next report. He has based his forecast on the supposition that no rain will fall before the end of the present month to help the *rabi*, and as there seems little hope of that, the scheme of his forecast may be accepted whatever may be said of the anticipated degrees of distress. There are two tracts in which in his opinion relief, whether in the form of work or gratuitous distribution, will be wanted at once. The first of these is a tract of about 430 square miles and a population of 75,850, lying in the north of the Bettiah subdivision, and comprising parts of the thanas of Bagaha and Hurdi or Shikarpur). The second is a smaller tract of about 36 square miles in area with a population of 22,400, and it lies to the south of the Sikrana river, about 10 miles to the north-east of Bettiah. The first tract is purely rice land, and both the *bhadoi* and the winter rice have been a failure, except where the latter has been irrigated from hill streams. The second tract grows all kinds of crops; but the *bhadoi* was a 5-anna crop only, the *kharif* has been a total failure, and there is no moisture for the *rabi*. In both these tracts Mr. Macpherson proposes to start test relief works forthwith. The rest of the district he has divided into areas in which he anticipates that relief will be required in three further stages, viz., in December, in February and in April. In some parts relief will not be required at all. I give in the margin a synopsis of his distribution of areas, including that in which relief is wanted at once. The difference between the total area and that mentioned in paragraph 57 above is said to be hill and jungle. He explains further that at the periods mentioned distress will not be acute among all the population in each case, and it would be perhaps fair to say that 10 per cent. is a reasonable percentage.

Month in which relief will be wanted.	Area in square miles.	Population.
1	2	3
November 1896 ...	467	177,506
December " ...	1,285	883,243
February 1897 ...	436	261,665
April " ...	304	146,904
Not at all "	641	390,157

62. This estimate I venture to think is somewhat too gloomy. As I understand Mr. Macpherson, he has based it on the assumption that the *rabi* will be a total failure, or nearly so; but for reasons which have been explained elsewhere in this report, I consider that such an event is most unlikely, and I confidently anticipate rainfall and crops similar to those which were recorded in 1874. If I am right in my interpretation of Mr. Macpherson's meaning, he is working on the belief that (as shown in Appendix D below) the crop outturn of the year will be that of the *bhadoi* and *kharif* alone, viz., 51,97,000 maunds, while I anticipate that it will be 72,22,000, including an 8-anna crop of *rabi*. In other words, he has I think considerably over-estimated the probable distress, for not only will the harvesting of the *rabi* employ large numbers in March, but the crop then reaped will feed many of those who, according to his present estimate, will come on our hands during February and April,

and will take off many of the November and December folk. I purposely do not go into h s calculations for the future, as they depend upon a contingency which I do not think likely to occur. At present we are immediately concerned with those who, in Mr. Macpherson's opinion, will come on our hands at once in November and December: these amount to 177,506 for nine months (till the end of August) and 883,243 for eight months. Add to these the urban population, which at 2·9 per cent. of the whole district population comes to 53,924. The otal is 231,430 for November onwards and 1,114,673 from December onwards. Taking the proportion of 5 per cent. stated in paragraph 8 above, this will give us 12,571 for whom employment is required every day in the present month, and 55,733 in December. The average daily attendance on relief works in 1873 was 561 in November and 4,589 in December. Even if we double these figures to include those on charitable relief, the figures are much smaller than those now estimated.

63. *Communications.*—Champaran is not so well off in this respect as other districts in Bihar, though the Bengal and North-Western Railway runs for about 55 miles through the district from south-east to north-west. The road mileage is 1,359, but the roads are not all in good order. The District Fund is a poor one, and most of the roads being unmetalled they have in so dry a season become very much worn. The northernmost of the two tracts where distress is first anticipated is at a considerable distance from the railway, Ramnagar, the centre of the tract, being 28 miles from Bettiah. The western and north-eastern portions of this area are also decidely badly off for roads. The other tract is close to Bettiah. However, until the rain falls carts and pack-bullocks can make their way all over both areas.

64. *Grain-stocks* — Mr. Macpherson reports that it is extremely difficult to estimate the grain still held in the district, but he judges that the zamindars, banias and larger cultivators have sufficient everywhere to keep them till the next *bhadoi* is harvested; while the petty cultivators and landless men have enough to keep them till a little beyond the date at which he believes distress will be declared in the various areas he has noted. But he reports that owing to heavy exports there cannot be much surplus. The figures in the margin give the operations by rail, showing a nett total export of 136,739 maunds. The Collector also reports that during the last two months grain has been exported largely to Saran and Gorakhpur by road, but he has omitted to notice the imports from Nepal, which from all I can learn were large till they were stopped by order of the authorities. Mr. Macpherson reports that he has been recommending zamindars and planters to buy grain to supply the deficiencies of their tenants and labourers. If possible these purchases will be made elsewhere; but if this cannot be done at a cheaper rate, Mr. Macpherson argues that their purchase locally will prevent the grain from being exported. If there is still a margin, the argument is sound enough; but if all the surplus grain has already been exported, large local operations will have no effect but to raise prices.

Periods.	Exports. Mds.	Imports. Mds.
From April to August 31st ...	95,379	4,937
September 1st to October 4th ...	19,399	2,382
October 5th to October 31st ...	30,277	997
Total ...	1,45,055	8,316

65. *Sources of food-supply.*—The railway and the river Gandak will enable food-grain to be landed in the district from other parts of India and from abroad when they are once landed in Calcutta. Mr. Macpherson suggests that Calcutta merchants should be informed of the character and prospects of the crops in Bihar, and of its probable requirements. I believe that this question is now occupying the attention of Government.

66. *Proposed measures of relief.*—The programme of relief works prepared under section 5 of the Code provides for local agency works to employ 175,835 people for 90 days, and there are also works to be carried out by professional agency, to employ 4,434 persons for the same time. The total is 180,269 for three months. Mr. Macpherson has given an elaborate abstract of these works thanna by thana, which it is unnecessary to reproduce here. A proposal has been made also to the District Board by Sir William Hudson, to arrange for the construction of a line from Bairagnia on the extreme north-west corner of Muzaffarpur to Balthar and Bagaha in the Champaran district. The matter is being separately dealt with. If the scheme is sanctioned, the second

length from Balthar to Bagaha would run through the south of the Ramnagar tract mentioned above, but the first length would run through a tract marked as quite safe: it would nevertheless probably attract large numbers of labourers from less favoured tracts. Further than this, Mr. Macpherson has a proposal that the silted up channels which once formed a connection between the Gandak river and the Dhanauti, should be re-excavated and some of the loops in the tortuous course of the latter cut through. This is largely a sanitary and an engineering question, and might perhaps be taken up under the Sanitary Drainage Act hereafter. At present it requires much further consideration before an opinion can be expressed upon it. Lastly, Mr. Macpherson is busy with his District Engineer in looking into the feasibility of introducing into Champaran the Gaya system of *ahars* and *pynes*.

In the sanctioned scheme, work on tanks all over the district is entered as capable of supplying work for 100,000 people for 90 days. Work will at once be started as an experiment on such of these as lie within the two affected areas.

67. *Estimate of expenditure.*—The Collector propounds some alternative calculations, but admits that at this moment they are purely hypothetical, and I do not reproduce them. For the present he has only been able to provide Rs. 50,000 in all: this seems insufficient if distress is so imminent as Mr. Macpherson believes, and I will address him again on the subject. He rightly says that large contributions cannot be expected from the zamindars of the district, as their funds will be fully occupied in protecting their own tenantry; but the Bettiah Raj may be expected to take its proper share in relieving distress, if not with cash, at any rate with grain and employment on works of improvement.

68. *Conclusion.*—Mr. Macphersion asks that the settlement operations may be suspended, and that the officers at present employed in them may be placed at his disposal for relief work. Orders on this subject will no doubt be passed by Government in due course. The collection of land revenue and cesses need not be suspended. This report, though very thorough and careful, has been received so late that I have not had time to examine fully Mr. Macpherson's estimates of area and population affected, or to compare them with the figures of 1873-74. On the whole I think the Collector's view is somewhat too gloomy, but the figures in paragraph 102 and in Appendices C and D show that Champaran has little to expect from its *rabi*, and that even with an 8-anna crop it will have much less than half its usual food-crop. An additional cause of concern is that the raiyats of the district, especially those of the north and west, are inert and wanting in energy and resource, so that they will do little to help themselves.

69. MUZAFFARPUR.—[Area 3,005 square miles, population 2,712,857]. The Muzaffarpur district is bounded on the south by the Ganges, on the north by the Nepal Terai, on the west partly by the rivers Bagmati and Gandak and partly by an imaginary line. On the east such a line is its only boundary. It is an alluvial tract of great fertility, particularly the southern subdivision of Hajipur; it is well watered, and possesses large expanses of swamp and jhil. The chief crop is the *kharif* owing to the great extent of rice cultivation in the Sitamarhi subdivision. Out of the total cultivated area 35·2 per cent. is devoted to *bhadoi*, 36·5 per cent to *kharif*, and 28·1 per cent. to *rabi*. Of the outturn in an ordinary year the *kharif* represents 45·65 per cent., the *rabi* 30·21 per cent., and the *bhadoi* 24·11 per cent. In respect of the relative proportions of the crops it is not unlike Saran, but one of its weak points is that the rice cultivation is concentrated so much in one part of the district to the exclusion of other crops, that the loss of the *kharif* crop is a heavy calamity over a considerable tract of country, and there are no compensations there to fall back upon.

70. *Reasons for apprehending scarcity.*—The rainfall of the present year was marked in Muzaffarpur by the same general characteristics as are found in the other districts of the Division, but with some special incidents. Rain commenced here not so late as elsewhere, as there was a good fall of 2·09 inches in May. June gave 6·07 inches against a normal fall of 7·42, and this was followed early in July by a heavy fall of 13·61, which caused some floods and filled the swamps at an unusually early date, thus preventing the cultivation of much land from which a crop is usually obtained. Up to the end of July,

Muzaffarpur had a total fall which was only one-tenth of an inch below normal. This heavy rain was followed by a long drought in August, and another in September, and the rainfall of those two months was only 12·41 inches against a normal fall of 19·07. No rain has fallen since the 18th of September, and by the end of October the deficiency amounted to 10·16 inches, leaving a rainfall of only 77·12 per cent. of the average. These facts imply damage to the *bhadoi* from floods, a short area of *bhadoi* and rice from the same cause, some loss of rice from the two periods of prolonged droughts, and very poor prospects of the *rabi*. The Collector's estimate is only 5 annas for the *bhadoi* and 3 annas for the *kharif:* these figures seem to me to be unduly low, but I do not propose to alter them without further reference to him: this impression of mine is strengthened by the fact that in 1873-74, when meteorological conditions were almost exactly the same, except that rain was not so heavy in July, the outturn was estimated at 11⅘ annas for the *bhadoi* and 4⅝ for the *kharif*. Moreover, prices in this district are higher than elsewhere, and are much above the rates of last year, as the figures in the margin (which are for Muzaffarpur) will show. For these reasons the Collector reports that scarcity is present, and that unless the *rabi* is a good crop distress will probably grow in intensity till next rainy season. His report is confessedly incomplete, but he has been making arrangements for careful enquiries through the police, and when these are completed we may expect more exact information.

71. *Area and population likely to be affected.*—Mr. Hare reports that if prospects do not improve the whole district will be affected, except perhaps the Hajipur subdivision with its *petite culture* and its well irrigation. Further than this he does not go, but promises fuller information in his next report. There can be no doubt, however, that whatever may happen to the centre and south of the district, Sitamarhi, with its predominant rice crop, must suffer, and I should be inclined without further delay to assume, as a first estimate, that half its area and population may be accepted as particularly affected, together with the urban population all over the district. The total population of the Sitamarhi subdivision is 924,396, of which the half is 462,198, and half the area is 507 square miles. If we accept the usual calculation for North Bihar and take 2·9 per cent of the population of the district as its urban population, we get a non-agricultural total of 81,672, and a grand total of 543,870, who will be the first to be affected. Five per cent. of this sum is equivalent to 27,193 persons who may request relief during the next few months.

72. *Communications.*—The means of communication throughout the district are extremely good. From Muzaffarpur itself radiate lines of railway north-west to Motihari, south-east to Darbhanga, and south to Hajipur, while the Darbhanga-Bairagnia branch traverses the centre of the Sitamarhi subdivision. The road system is good and sufficient, especially in the Sadar and the Hajipur subdivisions, though some of the most important roads are unbridged at the great rivers. The total mileage of the district is 1,630. In Sitamarhi there need be no difficulty in procuring carts and pack-bullocks to carry grain off the main roads if need be. The Gandak could be utilised, if necessary, to bring supplies to the railway at Hajipur and to the marts along the southern boundary of the district.

73. *Grain-stocks.*—In regard to this question Mr. Hare admits his inability to give precise information, and the result of enquiries made from many planters and from the Secretary of the Bihar Indigo Planters' Association is a collection of the most discrepant estimates. It is admitted that the most experienced planters themselves can form no idea of the stocks in their own *dehats*. The estimates are too vague to be worth reproduction, but the general opinion is that some of the zamindars have large stocks and all but the daily labourers and the non-agricultural class have grain in reserve which will feed them for from two to six months. Detailed enquiries are being made through the police, but I am not sanguine as to the result either here or anywhere else.

74. *Sources of food-supply.*—No special report need be submitted on the subject since with such excellent railway communication as the district enjoys the markets of the world are open to its inhabitants. The district imports

annually between 7,00,000 and 8,00,000 maunds of food-grain from Nepal, but this has probably been stopped for the present, as in Darbhanga, although the Collector does not refer to the matter.

75. *Proposed measures of relief.*—Mr. Hare reports that the schedule of famine works is being revised and added to: for the present, three experimental relief works are to be opened at once and I have ascertained from Mr. Mills, Inspector of Local Works, who has just returned from the spot, that they are located on (1) the Sheohar Road (No. 45), (2) the Purihar Road (No. 54), (3) the Nanpur-Pipri Road (No. 20). The construction of the branch line from Hajipur through the Darbhanga District to Katihar will provide employment for thousan of able-bodied labourers in the south of the district, and labourers from rel works in other parts of the district will be drafted to it as opportunity offe The Collector has asked for a further large additional grant for advances und both the Land Improvement and Agriculturists Loans' Act: this matter being separately dealt with.

76. *Estimate of Expenditure.*—The District Board budget is being revis and it is reported that funds will be saved wherever possible. This should ha been done some time ago, and I will see that no time is lost in arriving at so reasonably exact figures. Mr. Hare says generally that heavy expenditu will be required, and talks of 10 lakhs, but no details of the estimate are given.

77. *Miscellaneous.*—Two other points require to be noticed, though th are not referred to in the Collector's report. The first is that at an extraordina meeting of the Planters' Association held at Muzaffarpur on the 24th Octob which was largely attended, a resolution was passed by which the memb present determined to offer to Government their services and those of th assistants without remuneration for employment in relief work. It was a announced that a fund was being formed for purchasing grain for distributi or sale on easy terms to villagers. Orders were registered for the purchase 37,500 maunds for factories in Saran, Champaran and Muzaffarpur, and ma other orders are expected. The matter has been reported to me demi-official only, and I have in the same manner thanked the Secretary and pointed out him the paramount importance of making purchases from some distant m so as not to disturb the local market; he is in communication with Chittago and other places. No doubt when I can report the proceedings officially t public spirit of the planting community will be suitably acknowledged Government. Another point of interest in the Sitamarhi subdivision is the ve general damming of hill streams and rivers issuing from Nepal. A consid able area of land has been irrigated in this manner, and although there has be some quarrelling, the operations on the whole have been conducted with am and good feeling. The Inspector of Works, Bihar Division, on return fr leave, proceeded at once to Sitamarhi with the new District Engineer in or to view the work, and if possible to evolve some schemes by which some p manency may be given to this irrigation. His report is awaited.

78. *Conclusion.*—It will be seen that the information available ab Muzaffarpur is a good deal less than is the case with most other distric and I hesitate to accept the Collector's views. I think myself that m complete information will induce a modification of his present opinions, a I await the submission of his next report, which will doubtless be complete: his prognostications are correct, the situation is serious.

79. DARBHANGA.—Area 3,335 square miles; population 2,801,955. T district of Darbhanga is in many respects the counterpart of that of Muzaffarp It is bounded on the south by the river Ganges and the Monghyr district, a on the north by the Nepal Terai. Numerous streams flow into the distr from the Nepal hills, and south of the boundary stretches a broad belt of r land, across the north of the Madhubani subdivision. The centre and so of the district partake of the general character of the districts north of Ganges, but it contains a larger proportion of rice land than Muzaffarpur Champaran. The main crop of the district is the *kharif*. Out of the wh cultivated area, it is calculated that in an ordinary year 49·6 per cent. is *kharif*, 27·2 per cent. in *bhadoi* and only 22·9 in *rabi*. Turning to outturn, is estimated that 57·71 per cent. of the whole is contributed by the *kha* 21·05 per cent. by the *rabi* and 21·23 per cent. by the *bhadoi*.

80. *Reasons for apprehending scarcity.*—The rainfall in this district duri the present year has been unsuitable, not so much on account of deficien as on account of its capricious character and unseasonable advent. Up till

end of July the deficiency was only an inch and a quarter, but the district suffered from two long periods of drought in August and September, and much damage was thus caused to the rice. In August the rainfall was nearly up to the average, but in September it was 3 inches short, and no rain has fallen since the middle of that month, though a fall of about 3 inches is expected in October. The net result is a deficiency up to the end of October of about 17 per cent.

81. Weather such as that just described is necessarily fatal to a full crop either of *bhadoi* or *kharif*, and supplies very little hope for the *rabi*. Accordingly the Collector estimates for the *bhadoi* an 8-anna crop, and for the *kharif* one of 5 annas. He has made no guess at all for the *rabi*. Accepting these figures as correct, the outturn in maunds will be *bhadoi* 2,605,000, *kharif* 4,219,000 and *rabi* 2,719,000, total 9,543,000, as against an ordinary total of 25,843,000 maunds, distributed as follows: *bhadoi* 5,485,000, *kharif* 14,906,000, and *rabi* 5,437,000. The result is therefore only 36·94 per cent. of the average.

82 These figures, however, are confessedly only a first guess, and Mr. Carlyle's report generally is wanting in fulness. The reasons are, first, that information he has called for has not all been supplied; and, secondly, that he has been away from head-quarters a great deal during the last month, employed in making a personal examination of the whole district, which will in the end be well worth the time and trouble expended, as he will be able to check the reports of subordinates and to supplement them from personal knowledge. Mr. Carlyle also notices the high prices of grain, and points out that the price of the commonest rice in Darbhanga is now higher than 9 seers to the rupee, a rate not touched in 1874 till the month of March.

83. *Area and population likely to be affected.*—The Collector rightly reports that as time passes, the whole of the district must be affected, more or less, by the high price of grain, and he thinks that the only exception will be the south of the Somastipur subdivision and a few oases elsewhere. For the present we may assume as liable to distress in the first instance, the urban population and half that of the Madhubani subdivision. At 2·9 of the district total, the urban population amounts to 81,256, while half the population of the Madhubani subdivision is 507,350. The grand total is 588,606, and the area of the subdivision 1,349 square miles. Five per cent. on this total gives 29,430 persons as those likely to require relief in the next few months.

84. *Communications.*—The communications in the Darbhanga district leave little to be desired. The Bengal and North-Western Railway runs into the centre of the district from Muzaffarpur in the north west, and thence nearly due east towards Purnea, while another branch runs south to Dulsing Sarai and Mokameh. At present two portions of the district are rather remote from the railway, viz., the north of Madhubani and the south and east of the sadar subdivision. The defect in both cases will soon be cured however, as the Sakri-Madhubani line will bisect the Madhubani subdivision, while that from Hajipore to Katihar will run through the south of the Somastipur and sadar subdivisions. Roads are numerous, the mileage being 2,331 on the 31st March 1896.

85. *Grain Stocks.*—Mr. Carlyle has no definite information, but he points out that according to local opinion some of the zamindars have immense stores of grain, and he adds that it is believed that this year these are larger than ever, because alarms of scarcity began early, and much has been held back which would otherwise have been sold.

86. *Sources of supply.*—The railways, as in other districts, keep Darbhanga in touch with the wheat markets of the world. It has, moreover, in ordinary years a considerable import trade in food-grains with Nepal, the net imports, as the Divisional Administration Reports show, having been 374,000 maunds in 1894-95 and 387,000 in 1895-96. This exportation from Nepal has now been entirely stopped by the Nepalese authorities until further orders.

87. *Proposed measures of relief.*—Mr. Carlyle reports that so far he has started only one test relief work, viz., at Phulparas, in the extreme east of the Madhubani subdivision. No official report has been received so far of the result. As necessity arises, the Collector will open more test works in the Madhubani subdivision, but he does not expect to have relief works in full swing before February. The Sakri-Madhubani feeder line, which I believe has not yet been finally sanctioned, will provide employment for thousands of the professional labourer class for many months. I have addressed Government separately with a request that all preliminaries may be pushed on, so that earthwork may be started without delay.

88. Mr. Carlyle reports that so far he has given no advances for wells. He writes:—

"I have consulted a large number of gentlemen, European and Biharis, long resident in this district, and they are all agreed that advances for *kutcha* wells would be useless in this district owing to the nature of the soil, &c., nor can they recommend any other form of agricultural advances. Several months hence probably liberal advances will have to be given for seed for next year's sowings, but I do not propose at present to advance money, except where I am certain that it will be spent on some definite agricultural improvement, such as irrigation channels and tanks."

I have further discussed the matter personally with Mr. Carlyle, and agree that he is right.

89. A public meeting has been called for an early date in November to raise subscriptions and organise private relief. Raja Rameshwar Singh Bahadur was to preside.

90. *Estimate of expenditure.*—The Collector reports that at this stage he is quite unable to frame any estimate of expenditure. About Rs. 25,000 can be diverted from the sanctioned allotments under civil works, and there is also the estimated closing balance of Rs. 20,000; upon which the Collector can draw. Next year about a lakh of rupees could be provided. For the present this may suffice, but it is hardly necessary to remind Government that Darbhanga is usually the first district in the Division to require relief works, and that its resources are never equal to its expenditure on these occasions. In 1888-89, between January and October, the District Board spent Rs. 94,849, and Government Rs. 1,17,344. In 1892, relief operations were commenced in May and ended in July; the total expenditure was Rs. 2,69,816, of which the District Board contributed Rs. 69,816 from its own resources, and borrowed a lakh from Government, while Government contributed another lakh. For next year if relief has to be undertaken on a large scale, the Collector will have to ask for an advance from Government, and also for the suspension of repayment of the loan made in 1892-93. All this, however, is a matter for future consideration.

91. *Conclusion.*—I have also to notice that I hear demi-officially that the Maharaja of Darbhanga desires to help his raiyats to the fullest extent. He is reported to be endeavouring to buy a lakh and-a-half of maunds of grain for distribution and sale at easy rates. I have warned the Collector that such large operations as these must be conducted with special prudence lest they dislocate the local market and discourage private trade. Mr. Bell, the Manager, has just returned to India, and is ready to give every assistance.

92. The evidence before me is not sufficient to enable me to form a definite opinion on the state of Darbhanga. At present much distress need not be apprehended; but, if the Collector's estimates of the *bhadoi* and *khárij* crops are correct, severe scarcity must follow even if we get a fair *rabi* crop, because at the best of times the latter provides for the district only one-fifth of its food crop. The assistance and support of the Darbhanga Raj will be of great value.

Part III.

General Remarks.

93. Having now examined the condition of each district, chiefly upon the basis of the reports submitted by the Collectors, I turn to make some observations on the state of affairs in the Division as a whole, and upon certain points which are not touched upon in the preceding paragraphs. I follow in general the list of subjects mentioned in paragraph 9 of the Famine Code.

94. *Grounds for apprehending scarcity.*—These have been set forth in detail in the account for each district, and need not be referred to again at any length. There has been all over the Division a deficiency of rainfall as shown in the margin. But as is well known, this does not necessarily give rise to scarcity, provided that the rain is well distributed. This year, however, that element of disaster also was forthcoming, and the characteristics of the rainy season of 1896 have been everywhere a late commencement of the monsoon in June, and heavy rain early in July: then followed two long periods of drought till the middle of August and the middle of September respectively, since which time no rain has fallen at all. The universal result

District.	Deficiency.	Percentage on normal.
1	2	3
Patna	10·53	25·52
Gaya	7·34	17·80
Shahabad	10·30	25·44
Saran	20·48	47·26
Champaran	19·96	41·27
Muzaffarpur	10·16	22·27
Darbhanga	7·95	17·26

has been damage to the *bhadoi* from floods first in some places, and afterwards from drought, a withering of the rice seedlings, and late transplantation, and then the dying out of much of the crop; for the *rabi* crop the preliminary moisture, which is so essential in September and October, has been entirely absent, and thus great fears are entertained for it also. In these circumstances, the estimates of the *bhadoi* and *kharif* crops, framed by the District Officers, are, as given in the margin, expressed in annas of an ordinary average crop. Naturally, the mind turns to a comparison of these figures of rainfall and outturn with those recorded in 1873-74. In Appendix B I have given figures comparing the rainfall month by month in every district together with the normal fall. An extraordinary similarity is visible in the meteorological history of the two years in every district; but, in spite of that, the estimated outturn of the two crops, as given in the margin, varies a good deal from that of the present year, It will be seen that, except in Saran and Muzaffarpur, the estimates of the present year are higher than those of the District Officers in 1873; and if the estimates in both years are right, then the people have far better crops now than they had in 1873.

95. Moreover, it is fair to assume, I think, that the people are now in better case than they were at the previous period. The year 1873 was the last of a series of years which were marked by abnormal rainfall, and generally unusual weather. The year 1871 was an unusually wet year, the following year was unusually dry, while in 1873 the rainfall was deficient, almost beyond precedent. In spite of the unusual weather, fair crops were reaped, and it may be assumed that at the beginning of 1873 the condition of the people was not much below its usual standard. The distress of 1873-74 was entirely due to the failure of the rains of 1873, and chiefly to their deficiency during the three latter rainy months. In 1896 the situation is much better. The crops of 1893-94 and 1894-95 were excellent, the Commissioner reporting that the year 1894-95 had been "a decidedly prosperous one for agriculturists north of the Ganges, and a good average one for those in the south, except in Shahabad, where it was below the average." In 1895-96 agricultural affairs were not so prosperous, but on a review of the whole year, it appears that there was a crop estimated at ⅔rds of the usual outturn. I infer therefore that, so far as we have gone, not only are the people in better condition than they were in 1873-74, but that the two crops, of which we have fairly certain knowledge, are better, except in Muzaffarpur and Saran. In Champaran they are about the same.

96. Before leaving this part of the subject, it is necessary to say a word or two as to the *rabi* crop, though any estimate of its outturn must for the present be purely speculative. We are justified, I think, in the expectation that as the weather of 1896-97 has so far been extremely similar to that of 1873-74, the parallel may be continued, and that for the remaining months of the year 1896-97 we may have the same rainfall that was recorded during the last five months of 1873-74 and similar harvests. If this prove to be so, there is further reason to take courage, for the crops reaped in the spring of 1874 afford the most convincing evidence of the vitality of the *rabi*. It is usually stated, and with perfect truth, that in order to obtain a good *rabi* crop heavy rain is essential in September and October, but the statement takes no account of the efforts to irrigate which are made in a bad year, nor of the extent to which lands usually too wet for *rabi* are sown at such a time. In 1873-74, after a great deficiency of the rains in September, and an entire absence of rain in October and November, the showers which fell in December, January and February and even in March did so much to revive the crop that the recorded outturn in annas was as in the margin. A similar

Patna ...	12
Gaya ...	16
Shahabad ...	16
Saran ...	7
Champaran ...	8
Muzaffarpur ...	10
Darbhanga ...	8½

experience in 1896-97 will go far to rehabilitate the people. I shall return to the subject again below.

97. But though the estimated outturn of the *bhadoi* and *kharif* crops is so much better this year than it was in 1873, prices are vastly higher, and it is on this account that pressure is already beginning to make itself felt. This question must be regarded from two points of view. So far as the general agricultural population is concerned, who form the great bulk of the inhabitants of the Patna Division, it is a commonplace to say that high prices do not necessarily imply distress. The fact has often been stated, and in particular I would draw attention to the statistics of the famine in Bijnour at page 247 of Mr. Geddes' "Administrative Experience of former Famines." What really brings general distress is the cessation of employment. The zamindar and the ordinary agriculturist have everywhere their own stores of grain, and, so long as work is available, the daily labourers and landless men are paid in kind sufficient for their daily food, and have little or no concern with the price of grain in the bazar. It should never be forgotten that thousands of these daily labourers are practically permanent servants of a particular master who takes care to feed and assist them. On this subject of employment Mr. Stevenson-Moore has supplied me with a note which I give as appendix E, after adding a calendar of agricultural operations, Appendix F.

98. On the other hand, there is a considerable class whose income is not paid in grain, and who have to pay with cash for their daily food. This includes all persons with fixed incomes, many of the artisans, the majority of the dwellers in towns, and the great body of widows and other dependants together with the beggars and the very poor. It is upon these people that the stress of high prices first falls, and it is a feature of the present scarcity that this class will be inconvenienced at a much earlier period than is usual. At the same time it is to be remembered that their numbers are comparatively small; there must of necessity be many such who dwell in small villages of whom it is impossible to make any estimate, while on the other hand not all the people who live in towns will be immediately affected by the high price of grain. For the sake of convenience, however, I have assumed that the whole urban population of each district will be seriously straitened, and may require relief at an early date. They are estimated in Mr. O'Donnell's Census Report at 2·9 per cent. of the whole in North Bihar, and at 6·5 per cent. of the whole in South Bihar. The figures for each district have been mentioned in the district accounts. The especial attention of District Officers will again be called to this matter, which is at the present time one of the first moment.

99. The next step after ascertaining how prices range and what is the estimated outturn of the different crops in each district is to ascertain what those figures represent when reduced to maunds of grain. I have prepared, in Appendices C and D, two statements to which I would now invite attention. The first shows for each district the normal outturn, in an ordinary year, of each crop, and the ratio which such outturn bears to the total food-crop of the district. It is expressed in thousands of maunds. It is also accompanied by a chart which gives the same information in graphic form. The second statement shows side by side the normal outturn of each district together with the estimated outturn this year.

100. The first statement in Appendix C is full of information. It shows in the clearest manner how the different crops are in each district of widely different importance, and, read with the second statement, it shows why at the present moment there is much greater apprehension in some districts than others. In Patna, for instance, where the *bhadoi* and *kharif* crops are equivalent to nearly 64 per cent. of the total, the *rabi* is of minor importance. In Gaya almost everything depends on the rice crop, and with its admirable irrigation system the district is nearly always safe. In Shahabad the *bhadoi* is of little consequence, and the *kharif* and *rabi* are of about equal importance. This explains at once why the failure of the rice and the expected failure of the *rabi* make the outlook there so grave. Saran is most fortunately placed, as all its crops are of fairly equal value, and whatever happens it is pretty certain always to have one-third of its food crop safe. In Champaran the *rabi* crop is of comparatively little value, and it is this consideration which lends additional gravity to the situation: two crops of the year have passed, one with half an average outturn and the other with only a fourth. Darbhanga is in somewhat similar case, but the outlook is worse, because its rice is most important and the *bhadoi*

and *kharif* have failed to a greater extent. In Muzaffarpur the proportions are much the same as in Patna, but it has not so much to expect from its *rabi*, and the failure of its *bhadoi* and *kharif* has been much greater.

101. The next statement (D) enables me to determine to what extent the crops up to date have in each district fallen short of the normal outturn, and to forecast what the total result may be. Taking first the *bhadoi* and *kharif* crops, for which we have now a fairly substantial estimate, it will be seen that the outturn of those crops in a normal year and in the present season compare as follows (thousands of maunds being omitted):—

District.	Normal outturn of bhadoi and kharif.	Estimated outturn of bhadoi and kharif in 1896-97.	Deficiency.	Percentage of column 3 on column 2.	Remarks.
1	2	3	4	5	6
Patna	8,131	4,664	3,517	57	
Gaya	18,429	9,910	8,519	53·77	
Shahabad	15,448	3,335	12,113	21·58	
Saran	11,040	3,191	7,849	28·59	
Champaran	15,215	5,197	10,018	34·57	
Muzaffarpur	13,794	3,182	10,612	23·06	
Darbhanga	20,391	6,824	13,567	33·46	

These figures again confirm what has been said above in regard to the relative position of the different districts. We know from the above statement what the percentage of outturn is for the *bhadoi* and *kharif* crops in each district, and we know what proportion to the whole food-crop of the district is borne by those crops in an ordinary year. From these two factors, it is easy to calculate what percentage of their usual food-crop for the year each district has already secured, and what remains to be filled up by the *rabi* crop or by other means. The figures are given in the margin. They must be read with those which show the proportion of the *rabi* to the whole food-crop of the district which are these: Patna 36·01, Gaya 24·47, Shahabad 48·11, Saran 38·38, Champaran 21·02, Muzaffarpur 30·21, Darbhanga 21·05. It is manifest once more that with an ordinary *rabi* crop Patna and Gaya are both safe. For Shahabad everything depends on its *rabi*. Saran, with a larger *rabi* crop to look forward to, is a good deal better off than Champaran, while Muzaffarpur and Darbhanga are both in an equally perilous position.

Patna	42·86
Gaya	40·62
Shahabad	11·19
Saran	17·94
Champaran	27·29
Muzaffarpur	16·08
Darbhanga	26·41

102. It will be interesting to carry this calculation a little further and to speculate what will be the result of the year's crop if, as suggested in paragraph 96 above, we take for granted that the *rabi* crop of 1874 will on the whole be repeated in 1897, and I take the *rabi* outturn as follows:—Patna, Gaya, and Shahabad 12 annas each, Saran, Champaran, and Darbhanga 8 annas each, and Muzaffarpur 10 annas. I assume that the normal area will be sown with *rabi* because I set off against the land in which it has not been sown the empty rice lands in which winter crops will certainly be sown this year. The figures are given in columns 3, 5, &c., of the lower line in the statement shown as Appendix D. The result is as follows:—

District.	Normal outturn.	Estimated outturn in 1896-97.	Deficiency.	Percentage of column 3 on column 2.	Remarks.
1	2	3	4	5	6
Patna	12,786	7,868	4,918	61·53	
Gaya	24,401	14,389	10,012	58·96	
Shahabad	29,773	14,078	15,695	47·28	
Saran	17,918	6,630	11,288	37·	
Champaran	19,266	7,222	12,044	37·48	
Muzaffarpur	19,767	6,915	12,852	34·98	
Darbhanga	25,628	9,543	16,285	36·94	
Total ...	149,739	66,445	83,094	.....	

If the estimates suggested above are fulfilled, the outlook in all four northern districts will be gloomy, but at present we need not adopt them, and may await the development of events.

103. Before leaving this part of the subject, I desire to add that everywhere it is reported that *rahar* and sugarcane are doing remarkably well; and it is anticipated that opium will again be a good crop. Little can be expected from indigo, but my information is that in much of the land which is not commanded by irrigation planters will sow maize and other food-crops, which will yield an early return, and give them time to prepare the ground for the sowings of 1898. Similar steps were taken in 1866 and 1874.

104. *The area and population likely to be affected.*—These have been given in detail in the examination of districts, but the following synopsis will be useful:—

District.	Area.	Population.		Total.
		Urban.	Agricultural.	
1	2	3	4	5
Patna	250	115,263	600,000	715,263
Gaya	600	139,291	200,000	339,291
Shahabad	1,301	134,155	344,902	479,057
Saran	523	71,515	430,335	501,850
Champaran	467	53,924	177,506	231,430
Muzaffarpur	507	81,672	462,198	543,870
Darbhanga	674	81,256	507,350	588,606
Total ...	4,322	677,076	2,722,291	3,399,367

105. *Communications.*—Full details have been given under this head in treating of the different districts, but it is as well to bring into prominence the entire revolution which has been wrought in all the conditions of famine relief in this Division by the immense development of communications since 1873-74. In that year there was only one railway in Bihar—the East Indian Railway, and it ran through two districts only—Patna and Shahabad, the total length of rail in the Division thus amounting to 147 miles only. At the present moment there is at least a line of rail in every district, and the mileage of open line is as in the margin.

Patna	115
Gaya	39
Shahabad	58
Saran	84
Champaran	52
Muzaffarpur	75
Darbhanga	166
Total ...	589

In 1873-74 the Sone Canals had not been opened; now they supply water communication for many miles. In the same year there were, I believe, no steam ferries in the Division, and the cost of importing steamers from England was a large item in the cost of the famine. Now there is a steam ferry at every railway crossing; many ferry farmers use steam, and the India General Steam Navigation Company has a bi-weekly service running up the Ganges, and steamers ply up and down both branches of the Sone Canals. Lastly, in 1873-74 the number of roads were a mere fraction of what they are now, while the miles of road open on the 31st March 1896 were as follow:—Patna 1,212, Gaya 1,403, Shahabad 1,855, Saran 2,664, Champaran 1,359, Muzaffarpur 1,630, Darbhanga 2,331—total 12,454. These are changes which must immensely facilitate, and render vastly less expensive, the supply of grain and the execution of all operations connected with the relief of distress.

106. *Grain-stocks.*—On this subject I can speak with little certainty; for it will be seen from a perusal of what has been said above in dealing with the Collectors' reports that accurate information on the point does not exist, while mere opinions vary widely. I believe personally that there is everywhere at least a three months' supply, and that in many instances this is a low estimate. From all that I can learn the development of communications and the multiplication of railways has not induced the Bihari raiyat to encroach upon his food reserve or sell out his stocks: he is before all things cautious, prudent, and the slave of custom in all agricultural matters, and I am confident that as in 1874, when Sir A. P. MacDonnell wrote his Report on Food-grains in Bihar, so now his first care is to lay by enough for himself and his dependants, and that it is only the surplus with which he pays his rent, and

which he sells to provide himself with homely luxuries. In a subsequent report I hope to be able to give more information and to examine also the consumption of each district in connection with its imports and exports and its capacity for self-support.

107. *Sources of food-supply.*—In a Division so amply provided with means of communication the markets of the world are open to its demands, provided that communication with them is opened by steam from Calcutta. On this point more information is urgently needed, and any intelligence of a reassuring character, which could be published with the *imprimatur* of Government, would have the most beneficial effect, not only on the minds of the people, but also on the prices of grain.

108. *Proposed measures of relief.*—These have been fully described above district by district, and I need only summarise them here for convenience sake. Test relief works have actually been commenced only in Patna, Shahabad, and Darbhanga; but before the next report falls due, others will be started in all the remaining districts. It is the unanimous opinion of all persons that, so far, the population are in good case, and no emaciation or actual distress has yet appeared, and that there is still sufficient field work. Advances are being given freely everywhere except in Darbhanga, and almost all officers have asked for a large addition to their allotments. Considering the urgency of the case, I have taken the responsibility of allowing District Officers to spend large additional sums in anticipation of formal sanction. Public meetings have been called in some districts, and it is time that they should be called everywhere in order to organise charitable relief.

109. It is a most providential circumstance that just at this time of stress new railway works should be opened in every district of the Division except Patna, and even here the Gaya-Lakhiserai line will run so close to the eastern boundary of the Bihar subdivision that it will certainly attract labourers thence. These works will be of incalculable value in providing profitable employments for thousands of the labouring class for the next eight months.

110. Lastly, I think it would be most desirable if, in the present circumstances, the operations of the Survey-Settlement Department could be interrupted for a year. These operations, for reasons which it is unnecessary to enumerate, are a heavy burden on the villagers, and in such a season as the present I should be glad to save them every pice that it is possible. In order to avoid breaking up the survey parties, they might perhaps be allowed to continue in selected localities.

111. *Estimate of Expenditure.*—The District Boards everywhere have been revising their budgets and allotting funds for relief works. The following is a synopsis of their operations:—

District.	Amount available in 1896-97.	Amount available in 1897-98.
1	2	3
	Rs.	Rs.
Patna	25,000	25,000
Gaya	51,850	60,000
Shahabad	40,000	55,000
Saran	78,000	80,000
Champáran	25,000	25,000
Muzaffarpur	Not stated.	Not stated.
Darbhanga	45,000	1,00,000

These sums will suffice for the present, and will enable all District Officers to make a beginning with relief. Nothing but experience can show what further sums will be required and what the limits of our operations will be.

112. *Conclusion.*—I have now to bring this long report to a close. After a careful consideration of all the circumstances of the case, I am convinced that for the present there is no occasion for panic. We are in all respects but two in a better position than we were in 1873-75. The people start with better years behind them, and the material prosperity of the Division must

have increased during the last quarter of a century ; the *bhadoi* and *kharif* crops have been better than they were in 1873; our statistical information is much more full than it was in that year; and, lastly, our communications have developed to a marvellous extent. On the other hand, prices are extraordinarily high, and the scarcity extends over a far wider area, so that not only are our usual markets closed to us, but all markets are filled with competitors. Much depends on the result of the *rabi*. If we have a total failure, distress will be very severe; if we have a full crop, it will be moderate : but assuming that we have such crops as were reaped in 1874, we shall win through, with difficulty certainly, but still I believe without loss of life, and at a much less cost, provided that a steady supply of grain is available at rates which are not prohibitive. The note of the day is the opening of test relief works in the areas first to be affected, and the immediate organization of charitable relief for the non-agricultural population.

APPENDIX A.

FORM 19.

[See section 85(4) of the Code.]

Abstract of Daily Register.

Bhabua Famine Relief Works.

Kookoorad is the name of the place on Bhabua-Jahanabad road where work was first started.

Babu Kani Ram and Babu Mukund Sahoo, grain-dealers, appointed by the District Collector to supply grain to the coolies, are making arrangements to do so. Coolies have not complained up to date of the want of foodgrain in their respective localities.

Muhammad Samsuddin, Local Board clerk of Sasaram, has arrived here yesterday evening. I have requested the Subdivisional Officer to get a set of levelling instruments from Sasaram, and in the meantime he is assisting Munsif Chedi Ali to learn work.

Shaikh Abdullah,
Subdivisional Officer.

Statement showing for the head-quarters of each district in Bihar the rainfall, month by month, as compared with the normal rainfall and that for 1873-74.

APPENDIX E.

Note on the occupation of the labouring classes, Bihar, by MR. C. STEVENSON-MOORE, C.S.

Bhadoi.—The *tumni* or preparation of bhadoi fields begin in Jeth or about the end of May, and is finished in the Rohini Nichatra, *i.e.*, in June. The first operation is called *tokni*, *i.e.*, breaking up the soil of these fields where weeds have grown, and requires four labourers per acre. Towards the end of June ploughing begins, requiring five labourers per acre, and immediately after 20 labourers per acre are required to transplant marua seedlings and six per acre to replough the paddy, kodo and makai lands and sow the seeds. In Sawan (end of June and beginning of July), weeding requires 15 labourers per acre. Thus the proportion of marua to other bhadoi crops being in North Bihar as one is to two, the labour of 35 men between the middle of May and the 5th July is required in one acre; *i.e.*, 1½ acres of bhadoi land affords continuous daily employment to one labourer for 50 days. I estimate, therefore, that North Bihar can supply nearly 2,000,000 men with daily work on bhadoi lands for that period. Marua is the first crop reaped, viz., in August, and eight labourers per acre being required, three labourers per acre are employed in cutting makai towards the end of September.

Kharif or aghani paddy is the only important crop. Cultivation begins in February on lands liable to early inundation and in other lands in Rohini Nichatra (June). Jhil lands are prepared and sown in April. The first ploughing requires four labourers, after this one of two processes may be adopted—viz., broadcast sowing or transplantation. For broadcast sowing another ploughing is required in February or June, as the case may be, and sowing requires three labourers. The land is sometimes weeded in Sawan (June-July), requiring fifteen labourers. For transplantation six labourers are required at the beginning of August to prepare the land, and twenty-six labourers per acre are then required to transplant the seedlings. About ⅓rd of the aghani lands are sown broadcast. Thus an acre of paddy land affords employment to about thirty labourers, mainly from May to August. Paddy is cut in December, requiring about ten labourers per acre.

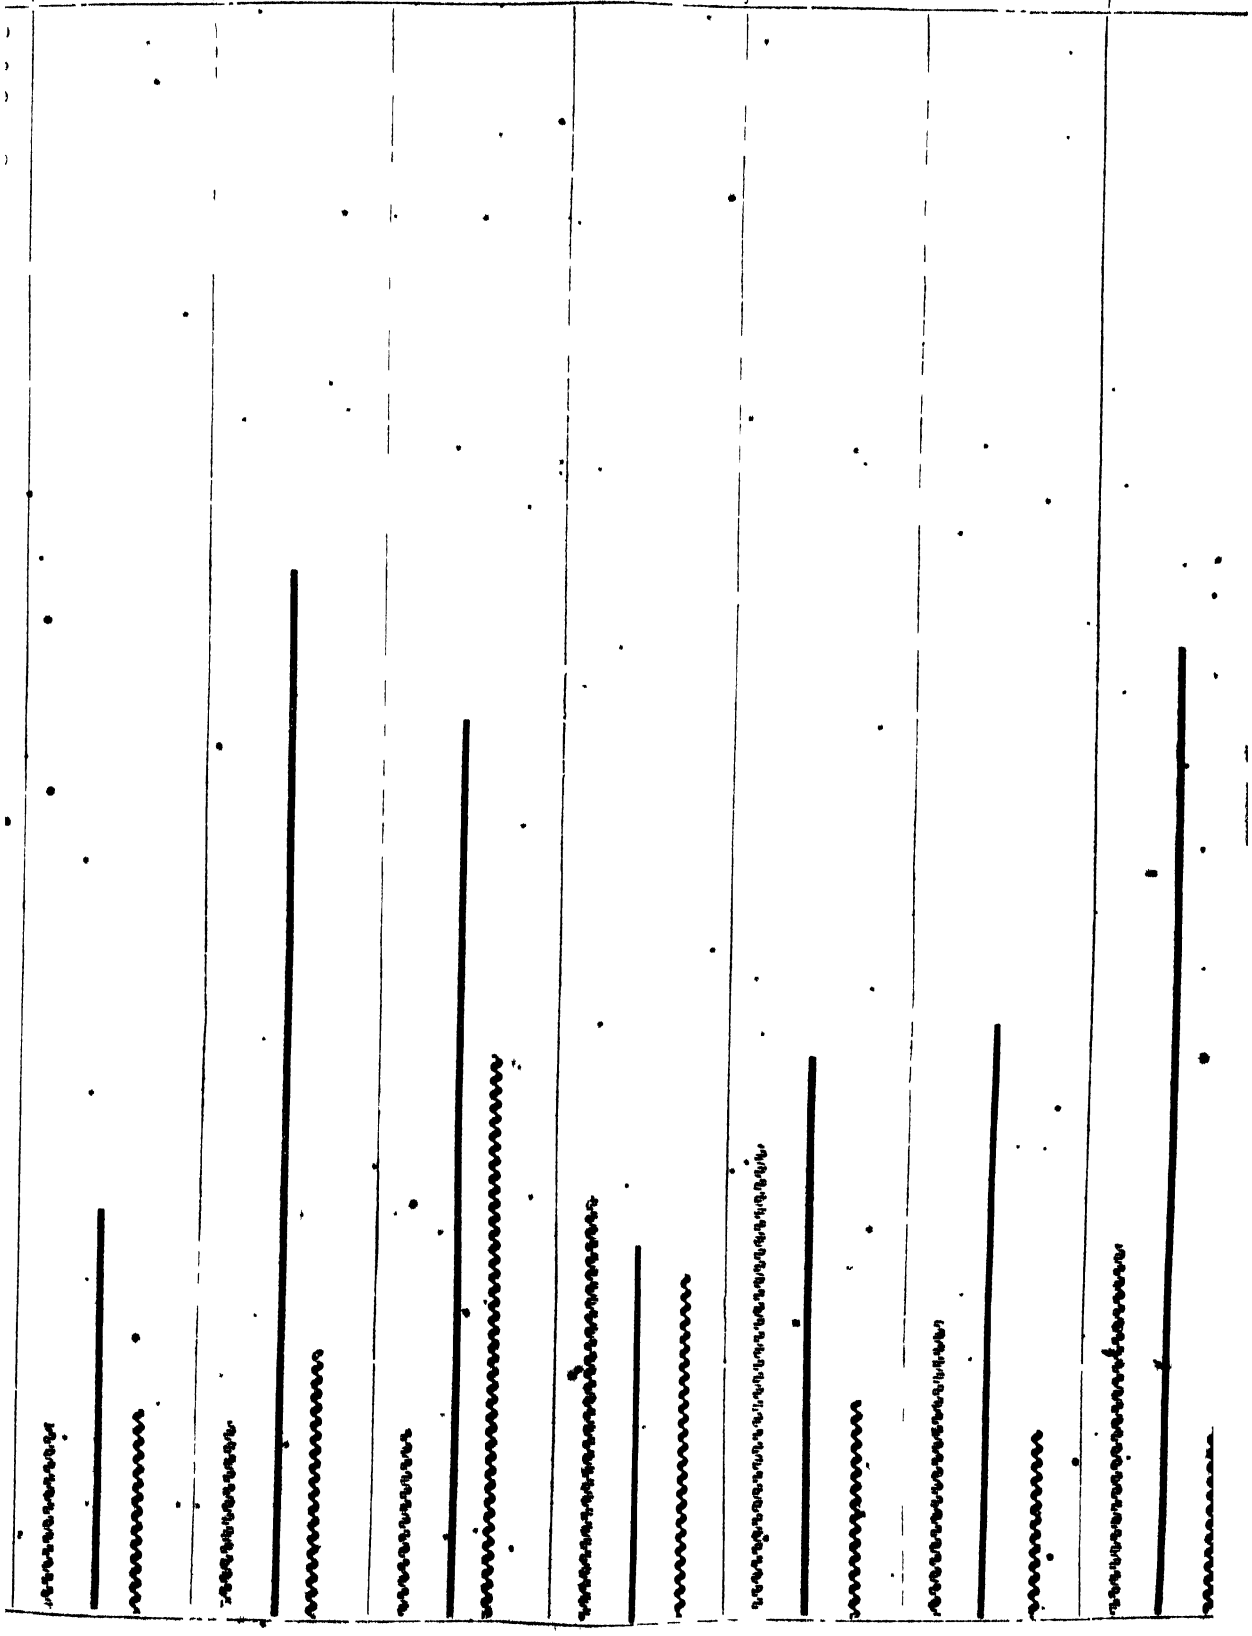
Rabi.—Little or no *tumni* is required, as bhadoi crops have already been grown on most of the rabi land. A small portion only of the rabi land is kept *chaumas* (viz. in furrows) during the rains, and in it wheat only is sown. The chief rabi crops are barley, wheat, khesari and arhar. Khesari is sown broadcast in paddy lands without any further preparation. Arhar is always sown with some bhadoi crops and requires no separate labour. Wheat and barley employ 20 labourers per acre for ploughing and sowing in October. The exact time depends on the rainfall. Rabi crops are reaped in March and April, requiring about ten labourers per acre.

To summarise.—The preparation and cultivation of bhadoi, aghani, and rabi crops afford almost continuous work to labourers from about the end of May until the end of October, and during this period they work in their own bhadoi fields when not required by their masters. From the beginning of November to the middle of March is the slack season for labour; during November-December labourers live on the produce of their own bhadoi fields and on their earnings from working in those of their masters. During the next 2½ months they live on their earnings from paddy-cutting, and even, though exchanging the paddy they receive for yams and cheap food of that sort, they often have difficulty in getting along. This year paddy has to a large extent failed, and the yam crop is very scanty, so the labouring classes will begin to feel the scarcity severely from about the beginning of January. If the rabi crops fail too, mahajans will stop advances, and from March to May labourers will be well nigh destitute. Then, if we get rain, they will begin to recover, but it will not be until they reap their marua in August that they will again be independent of help.

The cold-weather months are not altogether unproductive to the labouring classes. From October to the beginning of March they are largely employed in the preparation and sowing of indigo lands. The employment forms a valuable supplement to their scanty earnings, but their individual wages are small, and, in a year like the present, would be more valuable if paid in food-grain. The total number of labourers, however, who find employment in indigo factories throughout Bihar must be very large. *Tumni* in August to November employs 22 men per acre. Ploughing in October-November employs 3½ men per acre. *Ustani* (clod breaking) from end of October to November, 19 women and children. Ploughing in December employs 3½ men per acre. Second *ustani* requires 11 women and children in the same month.

Horrowing, August to January, employs 1 man per acre, and weeding in February 6 women and children. Hence an acre of indigo land gives employment to 30 men and 36 women and children. In Muzaffarpur and Champaran together there are nearly 5 lakhs of acres sown with indigo.

APPENDIX F.



A.—Calendar of agricultural operations in North and West Bihar.

Month.	Operations.
January ...	Cutting of sugarcane, indigo preparation, weeding of poppy.
February ...	Preparation of lands for early rice, indigo preparation, weeding of poppy.
March ...	Reaping of rabi crops, indigo preparations, weeding and lancing of the poppy.
April ...	Reaping of rabi crops including rahar, sowing of early rice.
May ...	Preparation for bhadoi, ploughing of early rice.
June ...	Preparation for bhadoi, ploughing and transplanting ditto, sowing of late rice, weeding of early rice, cutting and carting indigo.
July ...	Weeding of bhadoi, cutting and carting indigo.
August ...	Reaping of marua and of early rice, preparation of lands for late rice and transplanting ditto, indigo preparations, cutting and carting ditto.
September ...	Reaping of makai and other bhadoi crops, indigo preparations.
October ...	Ploughing and sowing of wheat and barley, indigo preparations.
November ...	Indigo preparations.
December ...	Reaping of late rice, indigo preparations.

GRAPHIC CHART TO ACCOMPANY APPENDIX C.

[The light curved rules represent *bhadoi*, the straight thick rules *kharif*, and the heavy curved rules *rabi*.]

1.	PATNA.	GAYA.	SHAHABAD.	SARAN.	CHAMPARAN.	MUZAFFARPUR.	DARBHANG.
	2	3	4	5	6	7	8

No 4567, dated Calcutta, the 12th November 1896.

From—E. M. KONSTAM, Esq., Under-Secy. to the Govt. of Bengal, Revenue Dept.,
To—The Commissioner of the Chota Nagpur Division.

I AM directed to acknowledge the receipt of your letter No. 666M R., dated the 12th November 1896, on the prospects of crops and the likelihood of distress in the Chota Nagpur Division, and in reply to say that the Lieutenant-Governor approves generally of the instructions issued by you. I am at the same time to convey the following remarks.

2. *Lohardaga.*—You should see that the wages to be offered on test relief works in Lohardaga, and wherever else it may be found desirable to open such works, are fixed strictly in accordance with the provisions of Chapter VII of the Famine Code.

3. *Hazaribagh.*—The outturn of the rice crop is reported to be not likely more than 5 to 6 annas; but the *bhadoi*, according to the returns furnished to the Director of the Department of Land Records and Agriculture, was a 16-anna harvest. Some funds for the purpose of providing charitable relief will, it is hoped, be supplied soon from those now in the hands of the Bengal Distress Relief Committee. Meanwhile the action ordered by you appears to the Lieutenant-Governor to be suitable and sufficient.

4. No immediate distress is apprehended in the other districts, but prices are high in all, and the situation requires careful watching. I am to invite your attention to the instructions given to the Commissioner of Patna in the letters noted on the margin, which were published in the *Calcutta Gazette*. The Forest Department is being addressed on the question of allowing the people to pick the *mahua* in the reserved forests. A further communication on the subject will be made to you at an early date.

(1) Government order No. 947-T.R., dated 15th October 1896.
(2) Government order No. 1010-T.R., dated 30th October 1896.

No. 666M.R., dated Ranchi, the 12th November 1896.

From—C. R. MARINDIN, Esq., C.S., Offg. Commissioner of the Chota Nagpur Division,
To—The Secretary to the Government of Bengal, Revenue Department.

I HAVE the honour to forward, for the information of Government, a review of the situation in this division in respect to the prospects of the crops and the likelihood of the occurrence of any distress among the people owing to scarcity and high prices calling for relief measures, which I have drawn up upon demi-official reports received from District Officers.

2. It will be seen that Hazaribagh is the only district which gives any cause for anxiety in the immediate future, and I trust that the instructions I have given to the Deputy Commissioner of Hazaribagh on the subject will be approved.

In Lohardaga and Singhbhum the prospects are best, and it may be hoped that the population will in these districts tide over till next season without the necessity of any relief measures, but it is too soon yet to prophesy this with certainty, especially with regard to Lohardaga.

In Manbhum and Palamau, and more particularly in the latter, it seems likely that relief measures will be wanted later on. I beg to bring the suggestion of the Deputy Commissioner of Palamau to allow the people to pick the mahua in the reserved forests to the special notice of Government, and to recommend that orders allowing this be issued to the Forest Department. The mahua in this district is an important addition to the food supply, and in a season of scarcity like the present the concession asked for would no doubt be of substantial assistance to the people who can avail themselves of it.

3. The situation in this division may be affected by an influx of people from the surrounding native states, where there has been failure of crops, and I shall be in possession of more accurate information of the condition of things there as soon as I receive the reports which I have called for from the Chiefs.

Memorandum on the state of the crops and prospects of distress from scarcity in the Chota Nagpur Division.

1. On the 26th October, I called upon all District Officers to report demi-officially on the state of crops and prices of grain and the prospect of any distress from scarcity in their respective districts.

The following is the substance of the reports received.

2. *Lohardaga.*—The outturn of the high land or *gora* paddy was 10 annas. The outturn of the winter or low land paddy is expected to be about 8 annas.

Prices were 6 seers the rupee for old rice and 9½ to 10 seers for new rice.

There is plenty of grain in the district, and most of the raiyats hold certain stocks and are expected to benefit rather than otherwise from the high prices.

The labouring classes will no doubt be pinched by the high prices and emigration to Assam will increase, but this class is not numerous.

The only indication of any scarcity so far is the increase to a certain extent of the number of beggars in the town of Ranchi.

The Deputy Commissioner does not at present anticipate any distress in his district requiring relief or action under the Famine Code. If any does occur it will be in the Panch Parganas which the Deputy Commissioner proposes to visit shortly, and where he will try and induce the zamindars to start embankment works which will serve as tests of the extent of the distress if any.

The Deputy Commissioner should fix the rates of wages on these works if he intends them to be test works.

There is evidently no immediate cause for anxiety in Lohardaga, but the situation should be watched and any change for the worse reported at once.

3. *From Hazaribagh, dated 30th October 1896.*—Regarding the outturn of the crops the Deputy Commissioner, who has just been over an area of about 700 square miles in the Sadar subdivision, reports that there will be in the worst villages in that division of the district an outturn of from 2 to 4 annas on the 12 months' crops of marua, makai and rice. These villages are destitute of any means of irrigation and depend entirely on the surface rainfall. They number about ⅛th to ⅙th of the total number of villages. In the next class where there are lowlying lands which get moisture from the higher lands by percolation by cutting bunds or lifting water, there will be a 4 to 6 annas' outturn. These villages amount to about ⅓rd of the whole. The Deputy Commissioner estimates that a 4 to 6 annas' yield will be enough for the people to live on, but not enough for next year's sowings.

In the third and best class of villages where there are *ahars* and a good deal of moisture from the high lands appearing on the surface of the low lands, the greater portion of the high land paddy will be lost, but there will be a good crop on the low lands. The outturn for these villages is estimated to be 6 to 10 annas; very much the same as last year.

The average outturn of the winter rice crop for the district would appear to be between 5 and 6 annas.

4. *Prices.*—The prices of rice have for some time been 8 to 10 seers per rupee and in the town and bazars have occasionally gone down for a day or two to 6 seers. There has been some "demonstrating" in the town of Hazaribagh during the last week in October, and the Deputy Commissioner was asked to fix prices, but he confined himself to making police arrangements to meet any emergency. Apparently there was no want of work but merely an agitation against the high price of rice. There is a large population in Hazaribagh town who will eat nothing but rice, although in the villages the same class will eat marua, makai and mahua in time of scarcity, and the Deputy Commissioner observes that until the coolie class in the town reach the stage of eating these coarser grains, they cannot be said to be in real distress.

The mahajans are said to be buying up all the local stocks available and to be holding them for a further rise in prices.

The last crop and weather reports from this district of the 9th November says that prices of rice range from 7 to 9 seers per rupee, and that public feeling is greater.

The Deputy Commissioner does not say what stocks there are in the district, but presumably most raiyats have some.

5. In the Giridih subdivision the situation is said to be more favourable than the above owing to the drainage which that part of the district receives from the higher plateau to the large area under poppy cultivation, and to the sources of employment for labour in the coal mines and the new railway close at hand in the Sonthal Parganas, and the Deputy Commissioner considers that the state of Giridih can hardly be called pressing at the present moment.

6. As to the necessity of relief measures, Mr. Herald thinks that it will be necessary to start some sources of relief in a month or six weeks in specially selected tracts. His road funds will have a probable surplus of Rs. 13,000 on the 31st March and Rs. 7,000 more could be saved by diversion from impending works, if the rule about keeping three months' funds in hand were suspended; and Rs. 20,000 thus available would be nearly sufficient, the Deputy Commissioner thinks, for the relief works likely to be required, though more might be wanted if food becomes dearer.

The most pressing want he considers is money for loans to small cultivators, and he asks for credit up to Rs. 10,000 to distribute on such loans in the Sadar. He also wishes Rs. 1,000

to be placed at his disposal for charitable relief as a fund for purchasing cotton to give employment to women, and he proposes to set private sources of charitable relief to work at once. A further grant may be wanted for loans to cultivators in Giridih, and the Subdivisional Officer proposes to start kitchens for the lame and blind, which the Deputy Commissioner considers premature.

7. The situation in Hazaribagh is worse than in other districts in the Division. There is apparently no immediate need for any relief measure by Government; and any relief that is wanted now should be obtained from sources of private charity which Mr. Herald proposes to organize. He is reque ted to report what action has been taken in this direction.

He is also requested to revise his District Road Committee budget at once, so as to save and keep as much money in hand as possible for the relief works which may hereafter be required. The revised budget should be forwarded along with an application to suspend the rule requiring a working balance of three months' income. He should also apply officially for a grant for loans to small cultivators explaining the terms on which he means to distribute it.

I hardly think it necessary to ask Government yet for an allotment of Rs. 1,000 for charitable relief. All that seems likely to be wanted in this direction either at the Sadar or Giridih at present should be done by private charity, and even to this extent I would caution Mr. Herald not to be too premature in the distribution of charitable relief and to control the action of any committees that may be started for the purpose carefully.

In the worst tracts where there are any signs of distress among the labouring classes test relief works should be opened to gauge to reality of the distress, and any action of this sort taken should be at once reported with a statement of the rates of wages fixed and the food which it will buy. The Deputy Commissioner. is requested to report weekly on the situation in his district.

8. *From Manbhum.*—This report is dated the 2nd November, but owing to a change of officers it was not received till the 8th. Mr. Morshead estimates the outturn of the rice crop at from 5 to 8 annas. Pulses and oil seeds 4 to 8 annas. Sugarcane 8-16 annas.

The price of common rice at the Sadar and Gobindpur was 10 seers to the rupee, and in the crop report of 9th November it was the same in the Sadar, but had fallen to 8½ seers in Gobindpur.

There are believed to be considerable stocks of rice in the district, but they are irregularly distributed.

Mr Morshead does not think any relief will be required till February, and possibly not then. The eastern portion of the district is likely to suffer most.

9. Mr. Luson, the present Deputy Commissioner, is requested to watch the situation carefully. There does not appear to be any immediate cause for anxiety, and the reaping of the rice harvest should give work for the present. Possibly the smaller cultivators may require loans to tide them over till next season, and if any sign of distress appear on any locality, test relief works should be started. The Deputy Commissioner should, in view of the possible necessity of relief measures in February, see at once what savings he can effect in his road fund budget. Charitable relief is not likely to be wanted for some time, and when any necessity for it arises, the sources of private charity should be first indented on. The rate at which emigration to Assam increases should afford a means of guaging the extent to which any distress is being left.

10. *From Singhbhum reports, dated 30th October.*—The *gora* or *aus* crop in September was a full average one, but the winter rice is not estimated to yield more than a six or seven annas' outturn.

Prices were low in August and the beginning of September about 20 seers for the rupee, but when scarcity declared itself elsewhere, the mahajans began to export, and they rose to 14 seers at Chaibassa; and along the railway the price is now as high as eight seers.

The crop report from this district of the 31st October gives the outturn of the *aman dhan* at 10 annas and the price of rice at 10 seers the rupee.

Mr. Bompas says that the agricultural classes are unwilling to part with their stocks, but otherwise seem free from anxiety about their prospects, and that with the work of supplying sleepers on the railway going on in the district, he does not expect to have to start any relief work, though the people may be pinched next summer and loans to cultivators may be wanted. Here, as in Lohardaga, it seems only necessary for the situation to be watched.

11. *Palamau, reports dated 31st October and 9th November.*—The September rice or aus dhan yielded a 12-anna crop. The prospects of the winter rice were excellent to begin with, but the yield is not expected now to be more than 6 annas. The rabi crop will entirely fail, except in the beds of the ahars, Mr. Cargill has lately been over a good portion of his district. and the above is the result of his enquiries.

The following prices are given in Mr. Cargill's subsequent report of the 9th :—

	Per rupee.
Wheat	9 seers.
Barley	10 „
Common rice	7 „
Best rice	6 „ 12 chittacks.
Marua	12 „ 6 „
Indian corn	12 „ 6 „

In the interior rice is selling somewhat cheaper at 9 and 10 seers, which is a favourable sign. The present very high prices seem to date from about the middle of October, and rose partly on account of the assured failure of the rice and bad prospects of the *rabi* and the sympathy with other districts.

12. As to the prospects of any distress calling for relief, Mr. Cargill thinks that there is no likelihood of anything of the sort happening till February or March next. The people have still some of the bhadoi rice in hand. The *lac* crop in November has been good and prices fair, and if there is a second good crop in April it will be a great help. The winter rice will yield 6 annas and there is the work of harvesting it. Part of the population are in the habit of living on jungly roots and fruits, and in the south of the district the jungle is heavy, cultivation scarce, the population sparse and cattle numerous. The mahua crop is also an important item in the food supply of the people, and Mr. Cargill suggests that Government might allow the mahua to be plucked this year by the people in the reserved forest. This suggestion will be recommended to Government. It is a hopeful sign in Palamau that the cultivators in the Government estate although, owing to the want of tahsil centres, they had to come long distances to Daltonganj to pay their rents, and though the management is in a transition state from a *ticadari* to a *khas* system, have already paid about 86 per cent. of the October kist.

No special action is required, I think, in this district, but it would be as well to see what savings can be effected in the District Road Committee budget, and the condition of the people should be carefully watched and any symptoms of distress reported as soon as they occur.

C. R. MARINDIN,
Offg. Commissioner, Chota Nagpur.

No. 1J.T., dated Camp Jajpur, the 5th November 1896.

From—R. C. DUTT, Esq., C.I.E., Officiating Commissioner of the Orissa Division,
To—The Secretary to the Government of Bengal, Revenue Department.

I HAVE the honour to bring to the notice of Government that the prospects of crops throughout this Division are considerably worse now than they were a month ago, and that the early cessation of rains has done more harm, and gives us more grounds for anxiety, than the floods of this year which were reported in September last.

CUTTACK.

2. The Collector of Cuttack, writing on the 26th ultimo, reports that the price of common rice had risen more than 20 per cent. over the normal price, as shown below:—

Marts.	Seers per rupee (last market day of July).			Seers per rupee (last market day of October).		
	Srs.	ch.		Srs.	ch.	
Cuttack ...	16	2	80 tolas to the seer.	12	8	80 tolas to the seer.
Kendrapara ...	17	3		12	0	
Jajpur ...	17	9		14	7	

The Collector adds that the high price is not due to depletion of the market, as the stocks in the district are still believed to be considerable, but to the general apprehension of failure of rice crop owing to the want of rain and the damage done by insects. If there be no rain very shortly, a serious failure of crops is anticipated, and scarcity is apprehended in many parts of the district.

3. Writing later, on the 30th October, from the interior of his district Mr. Growse says that the result of the early cessation of the rains is that the winter rice, which was replanted after the severe floods of July and August, and much of which promised a good outturn, is withering for want of moisture, and a great deal of it has already been spoilt. There is time yet, if there be rain within a week, to save some of the crops, but the sky shows no sign of rain. The *beali* crop in the area not protected by canals was destroyed by the floods of July and August, the *laghu saradh* or early winter rice in the same parts has been much damaged or destroyed by an insect-pest; and the regular winter rice too is likely to fail on account of want of the late rains. Some scarcity in these parts seems therefore to be inevitable.

4. On the other hand, the crops in the area under irrigation from canals are said to be in good condition. The Collector reports the irrigated area to be 148,187 acres, but it does not

appear if he has included the large area which has been brought under irrigation within the last fortnight. There is a rush for canal water, and the Canal Revenue Deputy Collector informs me that within the last half of October leases have been executed for irrigating something like 40,000 acres, over and above the area which was under irrigation before. But even if the total irrigated area comes up to one hundred and seventy or eighty thousand acres, that represents less than one-fifth of the whole area of the district under rice cultivation.

5. The Collector believes there are still considerable stocks of rice in the district, though the exportation since the last cold season has been continuous and almost phenomenal. But the mahajans and big zamindars are now chary in parting with it, and hence there is difficulty sometimes in getting rice in the market and the prices are high The prices of rice given by the Collector in his report of the $\frac{30\text{th October}}{2\text{nd November}}$ are these :—

	Seers per rupee. Srs. ch.	
Cuttack	11 3	80 tolas to the seer.
Kendrapara	15 2	
Jajpur	13 2	

There would seem some mistake in the figures for Kendrapara unless prices there have gone down since the previous week, which is unlikely. A further reference will be made to the Collector on this point.

6. I have also consulted Raja Baidya Nath Pandit, Babu Lakhi Narain Rai Chaudhri, Babu Juggo Mohun Lal and other intelligent zamindars of Cuttack district as to the prospect of the crops, and the information which they give me is in substance the same as is supplied by the Collector. The rice within the irrigated area is practically safe, and we may expect to get there a crop not very much below the average. Outside the irrigated area the outturn is expected to be 6 annas, or even 4 annas only, 16 annas representing the average crop. Raja Baidya Nath estimates it at 6 annas; Babu Lakhi Narain at even less. Babu Juggo Mohun Lal thinks there will be some scarcity in parts of the district, but not a regular famine.

7. With regard to stocks of rice, both Raja Baidya Nath and Babu Juggo Mohun Lal assure me that there are still considerable stocks of rice in the district, but it is not coming to the market. In the first place, the larger zamindars keep considerable stores of paddy for being advanced to their raiyats, and the Raja himself has paddy in store worth about Rs. 25,000. But this rice is not meant for sale in the market, and is therefore not brought to the market. In the second place, the mahajans too have large stores yet, but are holding back in view of the impending scarcity and in order to keep up the price, and hence the difficulty sometimes felt in getting a sufficient supply in markets.

8. Since coming to Jajpur subdivision, I have made enquiries from the Subdivisional Officer as well as from Mr. Webster employed on settlement work. A large part of this subdivision being under irrigation, the state of things here is considerably better than in the eastern subdivision of Kendrapara. The high prices of rice are a gain to those cultivators who have got rice. Rice sells here now at 9 seers (of 105 tolas the seer) per rupee, but Mr. Webster informs me that one benevolent mahajan persists in selling at 11 seers the rupee for the benefit of the common people, much to be disgust of his brother mahajans. The Subdivisional Officer thinks that in the irrigated tracts the outturn may be expected to be 12 annas, but that outside that area the crop can scarcely be over 4 or 6 annas. This may be taken to be generally correct for the whole of the Cuttack district, and scarcity is apprehended in those parts which have little or no lands under irrigation.

Balasore.

9. The Collector of Balasore, writing on the 27th October, reports that the prospects of crops in his district are extremely unsatisfactory and precarious. There was some local rainfall in a part of Bhadrak subdivision and in some parts of Baliapal thana, but elsewhere the crops on high lands are withering. They are being irrigated from tanks, *nalas* and water channels, wherever possible, but the area which can be so watered is very small compared with the total area under the rice crop. A kind of insect-pest has also made its appearance in some localities and has done much damage. Writing later, on the 31st October, Mr. Dé states that the crops on low lands are being irrigated from rivers, khals and tanks, but those on high lands are withering. Mr. Dé does not hope for more than a four-anna crop for the whole district.

10. The prospects in Bhadrak subdivision would seem to be somewhat better than in the rest of the Balasore district. Babu Sriram Chunder Bose, late Subdivisional Officer of Bhadrak, now employed on settlement duty, informs me that a six-anna crop may be expected for the whole of that subdivision. He apprehends some scarcity and distress, but not a general famine. The worst portions of the subdivision are parganas Bhera, Ankura, Byang and Kaima, and it is very likely that there will be some distress in those parganas. But people go in large numbers from these places to Calcutta for employment, and many will find employment in railway works in the district.

Babu Sriram Chunder Bose thinks that some relief operations may be necessary in February or March next for the support of those who are unable to work or fail to find work.

11. Rai Hari Ballabh Bose Bahadur has estates in Balasore district, and has lately visited portions of that district and of Cuttack. He informs me that many raiyats who were averse to taking canal water for irrigation so long are coming forward in large numbers and executing leases for five years to save their crops this year. He says the disinclination on on the part of cultivators to use canal water in ordinary years is due to the fact that the irrigation rate is comparatively high. In Burdwan district, where the rental of rice lands is about 5 or 6 rupees the acre, a sum of only 12 annas the acre used to be charged, if I remember rightly, for irrigation from the Eden Canal. In Orissa, where the rental of rice lands is about 2 or 3 rupees the acre, the irrigation rate is Re. 1-8 the acre. Rai Hari Ballabh rightly observes that in some places the irrigation rate equals or exceeds the rental. Considering the comparatively low rental in Orissa, the irrigation rate would seem to require revision, especially when it appears, as it does in the present year, that the area under irrigation can be considerably increased. The subject is one which requires some enquiry and careful consideration.

Puri.

12. The Collector of Puri, in his reports of the 26th and 28th October, writes that the prospects of winter rice are bad, that the crops on high lands are withering, and that the insect-pest has done considerable harm, but is now diminishing. Mr. Bell estimates a general outturn of 7 to 8 annas, and I shall be glad if he does not find reasons to reduce even this low estimate after further enquiry.

13. As in Cuttack, the Nakodas or Bombay merchants are still buying up rice for export, and this proceeding is looked upon with indignation and alarm by the people. Mr. Bell thinks that most of the rice exported by sea from Puri district at present goes to Ceylon.

14. As in Cuttack, the stores of rice are believed to be still large in Puri district. Mahajans and zamindars are in the habit of storing surplus paddy for years together, and they are holding back now in view of the impending scarcity. Prices are fluctuating, but Mr. Bell expects they will in a few week settle down at fairly steady though high rates.

15. Rai Hari Ballabh Bose Bahadur and Chowdhri Krittibas Das inform me that as in Cuttack there is sometimes difficulty in getting a sufficient supply of rice in the market in Puri. Chowdhri Krittibas takes a very gloomy view of things, specially with reference to Kotdesh pargana. Floods in that pargana and in some other parts of Puri are annual, and the stocks of grain are therefore poorer than elsewhere. The Chowdhri even expects a widespread famine as in 1866, but the information which I have detailed in the preceding paragraphs does not justify us in taking a view quite so gloomy.

Angul.

16. The Deputy Commissioner of Angul writes in his report dated 26th October that the *beali* and *laghu* (autumn rice and early winter rice) have yielded half the average outturn in spite of the damage done by the insect-pest. These crops are roughly estimated to grow on 30 per cent of the entire area under rice.

17. *Saradh* or regular winter rice grows on the remaining 70 per cent. of the rice area, and about one-half of this area which grows *saradh* is irrigable from tanks, reservoirs, &c. Mr. Wylly thinks that the rice in the irrigable area will be fully saved, while that in the other half, which is not irrigable, will utterly fail. It will seem therefore that the people of Angul have got a half yield of the early rice and expect a half yield of the winter rice; and they are better off therefore than the people in the regulation districts of Orissa.

18. With respect to miscellaneous crops Mr. Wylly reports that the *birhi* has been seriously damaged for want of rain and will not yield over 6 annas; the *rassi* is more seriously damaged and will not yield over 4 annas, but the sugarcane and *arhar* are doing well. The areas on which these last crops are grown are, however, small.

19. In the Khondmal subdivision there was some rainfall, and the Subdivisional Officer has no anxiety as to any serious failure in crops when he wrote last.

20 You will observe that I have not compiled this report under the Bengal Famine Code. There is no actual scarcity or distress in our midst yet, and I do not apprehend any serious distress for a few months yet. We are attempting in the meantime to obtain the most reliable information from all available sources and to find out exactly how we stand. The information which has been obtained so far is decidedly unfavourable. All over the Division outside the irrigated area the outturn of rice will be very poor, and some scarcity and distress may be expected. On the other hand, there are two circumstances in our favour, as I stated six weeks ago in my report on the floods of July and August last. There is yet some stock of rice in the country in the hands of mahajans and zamindars; and there is an exceptionally large field for labour in the railway works which are now under construction. My latest information, however, is that the distress in Bihar has driven large numbers of Bihar labourers to these works, and they are preferred to the Uriya labourers for their steady work.

No. 618Mct., dated Darjeeling, the 18th September 1896.

From—P. NOLAN, Esq., C.S., Commissioner of the Rajshahi Division,
To—The Secretary to the Government of Bengal, Revenue Department.

THE Lieutenant-Governor will have observed that there has been in this Division a deficiency in the rainfall of the present monsoon season, followed by a remarkable rise in the price of rice.

The following table brings together the relevant facts:—

District.	Rainfall from 16th May to 15th September.			Price of common rice on 31st August, seers per rupee.	Proportion borne by *bhadoi* to total rice crop of district.	Estimated outturn of *bhadoi* in annas.	Remarks.
	Actual.	Average.	Deficiency.				
1	2	3	4	5	6	7	8
				S. CH.			
Rajshahi	31·30	41·06	—9·76	9 0	13·6	8	
Dinajpur	30·07	53·76	—22·79	9 10	8·9	8	
Jalpaiguri	55·89	100·92	—45·03	11 0	28·3	6	
Darjeeling	92·33	96·32	—3·99	11 0	82·3	6 in the hills. 4 in the Terai.	
Rangpur	46·03	61·11	—15·08	9 0	22·0	12·5	Kurigram ... 16 Nilphamari ... 10 Gaibanda ... 12 Sadar ... 12
Bogra	37·26	49·56	—12·30	9 12	33·3	12	
Pabna	38·62	43·28	—4·66	10 8	16·2	10	

2. The following remarks by the District Officers in answering enquiries made by me on the subject are of interest:—

Rajshahi.—"The yield of the *aus* paddy is not expected to be more than 8 annas of an average crop. The prospects of the *aman* paddy are becoming less and less certain. The Padma has risen, and the flood water is entering the *bils*. This will save the crops in the low lands, but unless we get good rain soon, the *aman* crop in the Barind will be jeopardized. The price of rice has risen, but the prospects are not such as to cause very great anxiety, although they require to be keenly watched."

Dinajpur.—"In Thakurgaon and the west of the district jute and sugarcane are the principal crops. The outturn is distinctly better than last year. The only circumstances which will prevent the outturn from reaching the estimate will be want of water to steep the jute. Thakurgaon, however, has had over 8 inches of rain last week, and prospects in that subdivision are distinctly better. In the extreme south and east of the district the crop consists chiefly of rice, both *bhadoi* and *aman*. There was heavy rain in the beginning of July, and no complaints have reached about the *aman*. In the immediate neighbourhood of Dinajpur itself, that is, a radius of 10 miles, prospects are bad There is no water to steep the jute, and the winter rice seedlings after having been transplanted have dried up. If there is any distress, it will be in this tract."

On September 3rd Mr. Mullick reported that "there has been over 3 inches of rain since Monday, and prospects have greatly improved."

Jalpaiguri.—"The present price of rice in Jalpaiguri is 10 seers, Alipore 10 seers, Falakata 8 seers, Mynaguri 9 seers, and Boda 9 seers per rupee. If there are favourable rains for the *aman* crop, I do not anticipate that the prices will rise much higher."

Darjeeling—"In the hills the Manager of Government Estates reports the outturn of *aus dhan* cultivated by the Lepchas and Bhutias to be 6 annas, owing to want of timely rains. He estimates the outturn of *aman dhan* at 8 annas, owing to a similar cause. The Deputy Collector of Siliguri reports that the actual outturn of *aus* crop has fallen considerably short of expectations, owing to the insufficiency of rain. The expected outturn in the Terai is quoted at 4 annas."

Bogra.—"Excepting in a few isolated localities in the northern and western parts of the district we had plenty of rain in June and July to enable the cultivators to finish the transplanting of *aman* seedlings over the greatest portion of their lands. Taking the whole area on which winter rice is grown to be 16 annas, transplanting has been finished in about 14 annas of the land. But for the cessation of the rains in August the winter rice by this

time would have been in the most flourishing condition. As it is some lands on higher levels are still remaining to be cultivated, and although no injury to the standing crops has been done yet, rain is very urgently wanted, and if we do not get a copious shower of rain within the next fortnight, prospects of the *aman* crop will be gloomy."

Pabna.—"The *aus* crop has to a great extent suffered, owing to the insufficient and irregular rainfall during the sowing and flowering time. In February and March last there was ·25 and ·45 inches of rainfall respectively, consequently the sowing could not be carried on at the proper time. Again, the excessive and incessant fall of rain in June last retarded the progress of harrowing and weeding operations. In July 1896 the want of flood-water has seriously injured the crop on the high land, during its flowering time, the plants having withered away to a great extent. About one-half of the cropped area is high land, and as such is more affected by the low flood and deficient rainfall. The outturn, as far as I have ascertained on local enquiry, has been 10 annas on the average."

"*Aman dhan* is extensively cultivated in the district. The *aman* crop is in a critical condition. The floods are the lowest known within living memory, and rainfall has been very scanty. If we get heavy rainfall now, the *aman* crop may be a 6 anna crop; if we get no rain, it may be only a 2 to 4 anna crop."

3. The adequacy of the food-supply for the year will depend on the result of the *aman* rice harvest, and its prospects are still uncertain. The only precautionary measure I have thought it expedient to take is the revision of the programmes of famine works, with a view to obtain professional sanction to the larger projects.

NOTE.

FROM a return received to-day, I learn that on the 5th instant common rice sold in Sirajganj at the rate of seven seers the rupee. This is the highest price on record; I find nothing in the tables, published with Sir Antony Macdonnell's volume on the Bihar famine, beyond eight seers a rupee, the figure attained at Muzaffarpur, and there only in May 1874. In October 1873 the price at Sirajganj was 17 seers the rupee; its highest range during the following season was 11 seers. Last *Calcutta Gazette* showed 8 seers as the limit; this was attained in four districts, Rangpur, Mymensingh, Tippera and Hooghly. I have information later than the Gazette only as to Bogra (8½) and the Darjeeling Terai (8 to 10). There is a report in the bazar here, I do not know whether it has any prevalence, that the price this season is to reach four seers the rupee. Wheat has risen in proportion, and barley where it is much sold.

2. These extraordinary rates lead me to refer to the estimate of the outturn of the *aus* harvest, and the prospect in regard to the *aman* crop. Combining the information given, I find that the whole yield of rice in the Division is calculated for the year as follows:—Jalpaiguri, 6 annas; Darjeeling, 7 annas; Rajshahi, 9 annas; Dinajpur, 10 annas, Pabna, 10 annas; Bogra and Rangpur, 12 annas. The degree of failure represented by these figures, though large in itself, is small when compared with that experienced by the worst districts in 1873. Referring to the returns for a few districts, I find that in Shahabad the *aus* was half an average crop, the *aman* a fourth; in Saran the *aus* two-thirds, the *aman* one-tenth; in Dinajpur, where the *aus* is insignificant, the winter harvest was in places three-eights, in others a quarter, and in some localities nothing was obtained The Collector of Bogra attributes the high prices to failure elsewhere, and in this I agree, so far as his district is concerned, and Sirajganj In Jalpaiguri and the Terai the local failure will account for the state of the market. The drain is not to Calcutta for Bihar and the north-west, but to Mymensingh and the east. A very moderate demand for export will produce a great effect, as there is no surplus. The failure has been general throughout India, and when one district, in the course of trade, relieves greater necessities of another, it is out of stocks which in ordinary years would be consumed at home. Thus Bogra requires, to feed its own population properly, more than the three-quarter crop it is likely to get, and prices there must rise high indeed before they can attract away what can be dispensed with only by a reduction in consumption.

3. At this stage there is not much to be done by way of preparation. I have impressed on Collectors the importance of accuracy in the price returns, and of judgment in the estimate of crop outturns, particularly in regard to *aman*. I went over the estimates for relief works on the spot during the rains in all districts, except Dinajpur and Bogra, which are the first I will visit in the winter, and in regard to these two last, I am in correspondence with the local officers. They understand the importance of getting the "large" works, as defined in the Famine Code "sanctioned" in time, and of being ready to start the small works as a test. There has been no complaint as yet, nor do I anticipate any until February; the jute has been a tolerable crop, and the high prices it has fetched have put a great part of the population in funds. But we must remember that the abundance of money in some quarters only tends to raise prices, and if this rise does not attract imports, as this year it will not, the effect is rather to concentrate than to relieve the suffering incident to an insufficient supply of food.

P. NOLAN.

10th October 1896.

No. 618Mct., dated Darjeeling, the 18th September 1896.

From—P. NOLAN, Esq., C.S., Commissioner of the Rajshahi Division,
To—The Secretary to the Government of Bengal, Revenue Department.

THE Lieutenant-Governor will have observed that there has been in this Division a deficiency in the rainfall of the present monsoon season, followed by a remarkable rise in the price of rice.

The following table brings together the relevant facts:—

DISTRICT.	RAINFALL FROM 16TH MAY TO 15TH SEPTEMBER.			Price of common rice on 31st August, seers per rupee.	Proportion borne by *bhadoi* to total rice crop of district.	Estimated outturn of *bhadoi* in annas.	REMARKS.
	Actual.	Average.	Deficiency.				
1	2	3	4	5	6	7	8
				S. CH.			
Rajshahi	31·30	41·06	—9·76	9 0	13·6	8	
Dinajpur	30·97	53·76	—22·79	9 10	8·9	8	
Jalpaiguri	55·89	100·92	—45·03	11 0	28·3	6	
Darjeeling	92·33	96·32	—3·99	11 0	32·3	6 in the hills. 4 in the Terai.	
Rangpur	46·03	61·11	—15·08	9 0	22·0	12·5	Kurigram ... 16 Nilphamari ... 10 Gaibanda ... 12 Sadar ... 12
Bogra	37·26	49·56	—12·30	9 12	33·3	12	
Pabna	38·62	43·28	—4·66	10 8	16·2	10	

2. The following remarks by the District Officers in answering enquiries made by me on the subject are of interest:—

Rajshahi.—"The yield of the *aus* paddy is not expected to be more than 8 annas of an average crop. The prospects of the *aman* paddy are becoming less and less certain. The Padma has risen, and the flood water is entering the *bils*. This will save the crops in the low lands, but unless we get good rain soon, the *aman* crop in the Barind will be jeopardized. The price of rice has risen, but the prospects are not such as to cause very great anxiety, although they require to be keenly watched."

Dinajpur.—"In Thakurgaon and the west of the district jute and sugarcane are the principal crops. The outturn is distinctly better than last year. The only circumstances which will prevent the outturn from reaching the estimate will be want of water to steep the jute. Thakurgaon, however, has had over 8 inches of rain last week, and prospects in that subdivision are distinctly better. In the extreme south and east of the district the crop consists chiefly of rice, both *bhadoi* and *aman*. There was heavy rain in the beginning of July, and no complaints have reached about the *aman*. In the immediate neighbourhood of Dinajpur itself, that is, a radius of 10 miles, prospects are bad. There is no water to steep the jute, and the winter rice seedlings after having been transplanted have dried up. If there is any distress, it will be in this tract."

On September 3rd Mr. Mullick reported that "there has been over 3 inches of rain since Monday, and prospects have greatly improved."

Jalpaiguri.—"The present price of rice in Jalpaiguri is 10 seers, Alipore 10 seers, Falakata 8 seers, Mynaguri 9 seers, and Boda 9 seers per rupee. If there are favourable rains for the *aman* crop, I do not anticipate that the prices will rise much higher."

Darjeeling.—"In the hills the Manager of Government Estates reports the outturn of *aus dhan* cultivated by the Lepchas and Bhutias to be 6 annas, owing to want of timely rains. He estimates the outturn of *aman dhan* at 8 annas, owing to a similar cause. The Deputy Collector of Siliguri reports that the actual outturn of *aus* crop has fallen considerably short of expectations, owing to the insufficiency of rain. The expected outturn in the Terai is quoted at 4 annas."

Bogra.—"Excepting in a few isolated localities in the northern and western parts of the district we had plenty of rain in June and July to enable the cultivators to finish the transplanting of *aman* seedlings over the greatest portion of their lands. Taking the whole area on which winter rice is grown to be 16 annas, transplanting has been finished in about 14 annas of the land. But for the cessation of the rains in August the winter rice by this

time would have been in the most flourishing condition. As it is some lands on higher levels are still remaining to be cultivated, and although no injury to the standing crops has been done yet, rain is very urgently wanted, and if we do not get a copious shower of rain within the next fortnight, prospects of the *aman* crop will be gloomy."

Pabna.—"The *aus* crop has to a great extent suffered, owing to the insufficient and irregular rainfall during the sowing and flowering time. In February and March last there was ·25 and ·45 inches of rainfall respectively, consequently the sowing could not be carried on at the proper time. Again, the excessive and incessant fall of rain in June last retarded the progress of harrowing and weeding operations. In July 1896 the want of flood-water has seriously injured the crop on the high land, during its flowering time, the plants having withered away to a great extent. About one-half of the cropped area is high land, and as such is more affected by the low flood and deficient rainfall. The outturn, as far as I have ascertained on local enquiry, has been 10 annas on the average."

"*Aman dhan* is extensively cultivated in the district. The *aman* crop is in a critical condition. The floods are the lowest known within living memory, and rainfall has been very scanty. If we get heavy rainfall now, the *aman* crop may be a 6 anna crop; if we get no rain, it may be only a 2 to 4 anna crop."

3. The adequacy of the food-supply for the year will depend on the result of the *aman* rice harvest, and its prospects are still uncertain. The only precautionary measure I have thought it expedient to take is the revision of the programmes of famine works, with a view to obtain professional sanction to the larger projects.

NOTE.

P. NOLAN.

10th October 1896.

STATISTICS OF THE SEA-BORNE TRAFFIC OF CALCUTTA IN FOOD-GRAINS FROM JANUARY TO OCTOBER 1896, COMPARED WITH THE FIGURES FOR THE CORRESPONDING PERIOD IN 1895.

THE following memorandum and statements are published for general information.

STATISTICAL DEPT., M. FINUCANE,

The 23rd November 1896. *Offg. Secy. to the Govt. of Bengal.*

THE only articles under food-grains on which export duties are charged are—rice, paddy, and rice flour (cheera). The rate is 3 annas per Indian maund (82⅔ lbs.). There is no import duty on food-grains of any sort.

The imports of food-grains into Calcutta from foreign ports are small. During the first 10 months of the years 1895 and 1896, the total imports were as follows:—

		Cwts.
January to October ...	1895	789
	1896	138

Hong-Kong supplied only 72 cwts. in the 10 months of 1895, against 120 cwts. during the same period in 1896.

From the coast ports the only imports are rice and paddy, the quantities received in Calcutta from January to October 1895 and 1896, being—

	1895.	1896.
	Cwts.	Cwts.
*Rice ...	651,331	1,100,604
Paddy ...	27,715	501,345
Total ...	679,046	1,601,949

These figures show a remarkable increase of 922,903 cwts., or 135·91 per cent. Compared with these, the imports of rice from Burma are inconsiderable, as shown below:—

		1895.	1896.
		Cwts.	Cwts.
From	Rangoon ...	10,635	2,382
„	Moulmein ...	3,152	6
„	Akyab ...	...	305
	Total ...	13,787	2,693

Burma rice goes for the most part to foreign countries, the chief importers being the United Kingdom, Egypt, the Straits Settlements, and South America. The total quantities of rice and paddy exported from Burma during 1894-95 and 1895-96 were as follows—

	1894-95.	1895-96.
	Tons.	Tons.
Husked rice—		
To Foreign ports ...	1,139,028	1,230,609
„ Indian „ ...	274,181	137,560
Total ...	1,413,209	1,368,169
Paddy—		
To Foreign ports ...	5,964	1,140
„ Indian „ ...	.....	.....
Total ...	5,964	1,140

* Out of the above supply, only 1,182 tons of rice were sent to Bengal during 1895-96, against 38,057 tons in 1894-95.

Balasore and Chandbali are the ports which ship the largest quantities of food-stuffs to Calcutta, as the following figures will show :—

		Rice.	Paddy.	Total.
		Cwts.	Cwts.	Cwts.
Balasore ...	Jan. to Oct. 1895	156,453	7,516	163,969
	Ditto 1896	229,149	100,196	329,345
Chandbali...	Jan. to Oct. 1895	474,259	20,199	494,458
	Ditto 1896	855,887	385,471	1,241,358

In the case of Balasore, the increase in the trade of the current year is 100·86 per cent., and in that of Chandbali 151·05 per cent.

The following figures show the total exports of food-grains from January to October 1895 and 1896, both months inclusive—

	1895.	1896.
	Cwts.	Cwts.
To Foreign ports ...	8,213,733	5,315,786
„ Indian „ ...	2,421,727	1,438,269
Total ...	10,635,460	6,754,055

The total decrease during the past 10 months amounts to 36·49 per cent. The falling off in the exports to Foreign ports is 35·28 per cent., and to Indian ports, 40·61 per cent.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below.

M. FINUCANE,
Offg. Secy. to the Govt. of Bengal.

Statement No. 1, showing the quantities of Rice and Paddy imported into Calcutta from Foreign and Indian Ports during each of the ten months from January to October 1895 and 1896.

COMPARATIVE STATEMENTS OF THE PRICES OF FOOD-GRAINS.

RETAIL prices of common rice and other food-grains in the several districts of Bengal and in the neighbouring districts of the North-Western Provinces during the first and second fortnights of October and the first fortnight of November 1896, as compared with the corresponding periods of 1895, are published for general information.

From the above figures it will be seen that the price of common rice is between 80 and 100 per cent. higher, and in some districts, especially in those of Orissa, more than 100 per cent. higher than at the corresponding time of last year. This is due to a great extent to exports from Orissa, which have increased very considerably this year.

RAINFALL AND MOISTURE IN THE SURFACE-SOIL.

Memorandum by the Meteorological Reporter to the Government of Bengal on the rainfall in Bengal for the present year to the end of October, and a somewhat more extended consideration of the prevailing lack of moisture in the surface soil.

THE following tables, giving the average rainfall for the larger divisions of Bengal month by month, show an almost entire absence of rain during the first three months. Such small amounts of rain as fell have produced little permanent improvement, being usually a few tenths of an inch, sufficient to moisten the surface only. The drought continued till the middle of April, from which time thunderstorms with rainfall became more frequent in Bengal; and afterwards, that is, towards the end of April, in Bihar, Chota Nagpur and Orissa. From the middle of April till the commencement of the monsoon, rainfall was more frequent and copious in North and East Bengal than in normal years, about normal in South-West Bengal and Bihar, and considerably below the normal in Orissa and Chota Nagpur, especially the latter. This rainfall being due to thunderstorms was irregular in its occurrence, but never very heavy in amount.

With the setting in of the monsoon a marked change appeared. A low pressure area formed over the north of the Bay, and within this one cyclonic storm after another developed. They followed almost the same track westward across Orissa and part of Chota Nagpur, and caused much heavier rainfall in the southern districts than in the north of the province.

In June South-West Bengal, Orissa and Chota Nagpur received from 28 to 62 per cent., and in July Orissa and Chota Nagpur from 12 to 31 per cent. in excess of the normal. During these weeks from the middle of June to the end of July the northern districts received less than usual. North Bengal had only 49 per cent. of the normal in June, with practically the usual amount in July, and Bihar rather over 80 per cent. throughout. The effect therefore of the continued low presure in the north of the Bay was to deprive North Bengal and Bihar of a considerable portion of the rainfall in perhaps the most important part of the monsoon season.

From the beginning of August there was a decided weakness in the moonsoon current, except in Orissa, where the average rainfall was 28 per cent. in excess. The total fall in North Bengal was only 39 per cent., in East Bengal 46 per cent., and in South-West Bengal and Bihar from 70 to 75 per cent. of the normal. The rainfall occurred during the passage of shallow depressions, and it was not well distributed, especially in Bihar, where a large proportion of the rain was received in heavy falls on the 21st, 22nd and 23rd. Thunderstorms were more frequent than usual, and being followed by brighter sunshine, an appreciable part of the rainfall was probably soon lost in vapour.

There would have been very little rain in September but for a shallow depression which formed in the north of the Bay about the middle of the month, and followed zig-zag path, first north into the Sundarbans, then west across Lower Bengal into Chota Nagpur, and afterwards north-east into North Bengal, where it filled up. This irregular course brought every part of the province under its influence, except the extreme west of Bihar, where very little rain fell throughout the month. There were several days of general rain, moderate in amount in Lower Bengal, Orissa and Chota Nagpur, but excessive in the east of Bihar and north of Bengal during the two last days of the existence of the depression. The average fall during these two days must have been about 8 inches, a large portion of which must have been carried away by surface drainage. From the middle of the month rainfall became more scattered, and in Bihar almost entirely ceased. The greater part of the rainfall in the last week was in East and North Bengal, but at times it spread westwards, though in no great quantity, to South-West Bengal and Orissa. In consequence of the heavy fall in the middle of September in North Bengal and the continued showery weather throughout in East Bengal, these were the only divisions that received excess falls. In the west and centre of the province amounts were from 12 to 35 per cent. in defect—the latter in Chota Nagpur.

From the beginning of October rainfall all but entirely ceased, except in North Bengal, where light showers fell at the beginning and towards the end of the month. The average fall was practically nil, except in East Bengal, were it was 9 per cent., and North Bengal, where it was 26 per cent. of the normal fall. In addition to the absence of rainfall, day temperatures were steadily several degrees above the normal, and the hot dry westerly winds which blew across a great part of the province must have quickly dried up whatever moisture was near the surface.

In discussing the connection of rainfall with crops whose roots may be assumed to pass only a few inches below the surface of the ground, a consideration of great importance, I think, is the depth of the sub-soil water. My reason for attaching importance to this is that moisture at a considerable depth below the surface may be raised through the pores of the soil by capillary action, and in ordinary years, when the sub-soil water is at its normal depth or higher, this action gives an adequate supply of moisture even if there should be scanty rainfall. If the sub-soil water be taken into account, a consideration of the rainfall during 1896 is not sufficient to account for the present condition of the soil, and it is doubtful if even that of 1895 will satisfactorily explain the present want of moisture. Starting, however, with the assumption that the depth of the sub-soil water was normal at the beginning of 1895, the rainfall of that year was so unsatisfactory that there must have been a greater loss than usual, partly by drainage and partly by evaporation.

The following tables give the rainfall during 1895 month by month for the various divisions, the second as percentages of the normal, the first in inches, and they both show the difference from the amounts usually received during the respective months. In the early part of the year there was unusually little rain, except during April, when every division received more than the normal amount. On the whole it may be taken that there was during the first six months a greater loss of moisture than usual in the soil, not only near the surface, but at greater depths, and that the surface of the subsoil water was depressed below its normal level.

During the monsoon months from July to October rainfall was considerably in excess in parts of the province, but those divisions which show more than the usual amount one month had less the following month; for example, in July excess rainfall was confined to North Bengal and the east of Bihar, and in August to Orissa and the west of Bihar. At other times all divisions received less than the usual amount, and the average fall for the monsoon season was below the normal over the whole province. The loss of moisture which had been going on from the beginning of the year must therefore have continued till the end of September. The crops in that year would undoubtedly have suffered from the shrinkage of the subsoil water if timely rain had not fallen at the beginning and towards the end of October. During November and December there was very little rain except in East Bengal, where more than an inch fell during the passage of a depression unusually late in the season. Taking the average for the whole year, the rainfall in every division of the province except Orissa received from 11 to 29 per cent. less than the usual amount of rain in 1895, and on the assumption that the soil had an average amount of moisture at the beginning of the year, there must have been considerably less than the average at the end.

This condition was probably intensified by the character of the rainfall during the monsoon season of that year, the peculiarity being even more marked in 1896. This was the comparative absence of cyclonic storms, which cause cloudy weather with moderate general rainfall over a wide area, and the more frequent occurrence of local disturbances or thunderstorms attended by a short but heavy downpour, a large portion of which would fail to penetrate the surface, being carried off by surface drainage. Whether the surface were drained or not, the period of rainfall being shorter than usual, and the sunshine greater, there would under these circumstances be greater evaporation and a further loss of moisture. This loss would, no doubt, be of importance when withdrawn from a soil already deprived of a portion of its normal amount of moisture.

Without referring to the depth of water in tanks, which I have no doubt would support my conclusion in most parts of the province and certainly in the neighbourhood of Calcutta, I think it safe to assume that the sub-soil water was much lower than usual at the beginning of 1896, and that the upper layers of the soil were in consequence drier, though it might not have been to a very marked degree.

The information regarding the rainfall of 1896 given in the early part of this memorandum, shows that the deficiency of moisture with which the year began has never been made up, but has at times greatly increased. In the early part, that is, up to the middle of April, there was not only unusually scanty rainfall, but temperature was month by month several degrees above the normal and occasionally higher than has been recorded at corresponding dates since the present system of meteorological observation began. The double loss of moisture in the soil must, therefore, have continued, owing to the scanty rainfall and the evaporation of such water as reached the surface from below.

Rainfall became more general from the middle of April, and more than the usual amount fell till the early part of the monsoon season was over, that is, till the end of July. From that time till now not a single cyclonic storm formed in the Bay, but one or two shallow depression passed over the province in August and one in the middle of September. Except during the existence of these shallow depressions, much of the rain that fell was caused by local thunderstorms and was less efficacious than the same amount would have been if it had been allowed time to penetrate to a distance below the surface. The monsoon rainfall of the present year has not, therefore, added much to the supply of subsoil water, and the disastrous effects on the crops which have followed the almost entire absence of rainfall since the middle of September must be partly due to that fact.

The absence of reserve moisture below the surface must remain for months to come a serious danger to all crops, as they will require more than usually favourable rainfall for their support. There is no immediate prospect that rainfall will be either more plentiful or more frequent, and the next chance will come with the season for cold weather rainfall in January.

I have attempted to show that—

(1) the subsoil water has been falling more rapidly than usual during the past two years in the drier months.

(2) the monsoon rainfall in both 1895 and 1896 was not sufficient to supply even what is lost in ordinary years, so that when the rain ceased in the middle of September, the subsoil was inadequately charged with moisture.

(3) the hot westerly winds during October rapidly dried the surface layers of the soil, and the moisture necessary for the support of the crops was restored neither by occasional rainfall nor by capillary action from the subsoil.

C. LITTLE,

Meteorological Reporter to the Govt. of Bengal.

Famine and Scarcity.

1874.

Cause.—The winter rice crop of 1872 was only half an average crop. The rainfall of 1873 was very unseasonable as in other districts. The *aus* rice crop, however, escaped injury except in places where it was damaged by floods, and the winter rice crop, though seriously injured, was well over half an average crop. The prevalence of epidemic fever for the past ten years had materially added to the troubles of this district.

Private trade.—Private trade in food-grains was reported to have been active in this district throughout the period of distress, but from a consideration of the returns of trade during the year, Mr. MacDonnell did not believe that the district derived much help from outside. Prices were throughout cheaper in Burdwan than in many other districts, and consequently exportation from the district never ceased.

Relief given.—The expenditure of cash and grain in relief was as follows:—

	Grain. Tons.	Cash. Rs.
Charitable relief	6,812	5,46,723
Wages of labour	1,495	62,277
Loans	3,002	70,559
Grain sold for cash	4	.....
Total ...	11,313	6,79,559

The number of persons charitably relieved averaged in each fortnight as follows:—

In fortnight ending	9th	March	1874	...	...	115
Ditto	23rd	„	„	...	...	142
Ditto	6th	April	„	...	...	6,987
Ditto	20th	„	„	...	...	13,870
Ditto	4th	May	„	...	...	10,625
Ditto	18th	„	„	...	...	10,939
Ditto	18th	June	„	...	...	11,351
Ditto	15th	„	„	...	...	12,182
Ditto	29th	„	„	...	...	26,000
Ditto	13th	July	„	...	...	55,046
Ditto	27th	„	„	...	...	58,932
Ditto	10th	August	„	...	...	69,551
Ditto	24th	„	„	...	...	61,196
Ditto	7th	September	„	...	...	67,369
Ditto	21st	„	„	...	...	60,828
Ditto	5th	October	„	...	...	58,492
Ditto	18th	„	„	...	...	5,660
Ditto	2nd	November	„	...	...	5,663
Ditto	16th	„	„	...	...	4,761
Ditto	30th	„	„	...	...	3,475

The numbers so relieved were equivalent to 250,989 individuals relieved for the period of one month. It will be noticed that gratuitous relief was given in this district up to a much later period than was found necessary in other districts.

The average daily attendance on the relief works in each month was as follows:—

January	1874	...	1,168	June	1874	... 11,574
February	„	...	3,513	July	„	... 7,571
March	„	...	3,359	August	„	... 5,252
April	„	...	6,430	September	„	... 2,206
May	„	...	9,613			

This was equivalent to 50,686 persons relieved by wages for the period of one month.

Since 1874, the district has been free from scarcity and famine.

FAMINE AND SCARCITY.

1874.

Cause.—The winter rice crop of 1872 was a short one, except towards the east. The rainfall of 1873 was very irregularly distributed. It was scanty in May and June, excessive in July and August, and quite insufficient in September and October. The outturn of *aus* rice was estimated at 9 annas, and that of winter rice at only 6 annas, the failure of the crops being greatest in the central parts of the district. The distress of the people consequent on the short harvest was further aggravated by epidemic fever of a virulent type which had been prevailing for some time, and by a serious outbreak of cholera in March and April, 1874, which spread over the entire district and caused much mortality.

Private trade.—It was a noteworthy fact that the exports of food-grains from the district during the 12 months ending with September 1874 exceeded the imports by nearly 1,400 tons, the import including some 3,900 tons despatched by Government for purposes of relief.

Relief given.—The actual expenditure of cash and grain incurred by Government in relief was as follows:—

	Grain.	Cash.
	Tons.	Rs.
Charitable relief	1,725	49,456
Wages of labour	1,004	64,809
Loans	800	61,615
Total ...	3,529	1,75,880

The average number of persons charitably relieved was as follows:—

In fortnight ending	9th	March	1874	149
Ditto	23rd	„	„	680
Ditto	4th	April	„	6·3
Ditto	18th	„	„	1,796
Ditto	2nd	May	„	3,600
Ditto	16th	„	„	5,475
Ditto	30th	„	„	9,801
Ditto	13th	June	„	10,913
Ditto	27th	„	„	18,014
Ditto	11th	July	„	20,254
Ditto	25th	„	„	24,615
Ditto	8th	August	„	31,395
Ditto	22nd	„	„	38,321
Ditto	5th	September	„	37,439
Ditto	19th	„	„	31,243
Ditto	3rd	October	„	21,957

These were equivalent to 120,157 individuals charitably relieved for a period of one month.

The average number employed on relief works was as follows:—

February	1874	...	652	June	1874	... 10,352
March	„	...	2,107	July	„	... 6,655
April	„	...	3,846	August	„	... 7,826
May	„	...	8,054	September	„	... 5,194

These were equivalent to 44,486 persons relieved by wages for one month.

† The Collector estimated the outturn of *bhadoi* rice as 14 annas, and that of winter rice at 6 annas. The figure given is taken from Mr. MacDonnell's "Food-grain Supply," and includes *bhadoi* and winter rice both.

* Separate subdivisional figures are not available.

AMINE AND SCARCITY.

1874.

Cause.—The year 1873 was ushered in by a short winter rice crop in 1872, estimated at only one-half of the average. The rainfall of 1873 was unseasonably distributed, as in Birbhum, with the result that the rice crop (including both *aus* and *aghani*), which is practically the only source of food-grains in the district, gave a little over seven-sixteenths of the average outturn.

Private trade.—Importation of food-grains seem to have been steadily carried on, but up to March 1874, they were nearly balanced by the exports *vid* Raniganj. Since March, however, there was very little export, but food-grains continued to be imported from Midnapore and Chota Nagpur, though in an intermittent manner.

Relief given.—The expenditure of cash and grain is exhibited below:—

	Grain.	Cash.
	Tons.	Rs.
Charitable relief	930	1,02,659
Wages of labour	797	96,850
Loans	1,290	56,005
Grain sold for cash	87	.....
Total ...	3,104	2,55,514

The number of persons charitably relieved was as follows:—

In fortnight ending	23nd March	1874	489
Ditto	6th April	„	1,432
Ditto	20th „	„	3,513
Ditto	4th May	„	6,852
Ditto	18th „	„	8,130
Ditto	1st June	„	10,909
Ditto	15th „	„	14,446
Ditto	29th „	„	24,635
Ditto	13th July	„	36,899
Ditto	27th „	„	39,398
Ditto	10th August	„	32,802
Ditto	24th „	„	17,645
Ditto	7th September	„	15,354
Ditto	21st „	„	11,240
Ditto	5th October	„	7,319

These were equivalent to 107,828 individuals gratuiously relieved for a period of one month.

The average attendance in the relief work was as follows:—

March	1874	2,291
April	„	1,890
May	„	2,639
June	„	3,492
July	„	3,651
August	„	4,103
September	„	3,302

These were equivalent to 21,368 persons relieved by wages for a period of one month.

Since 1874 the district has been free from scarcity and famine.

FAMINE AND SCARCITY.

1874.

In 1874 the district of Midnapore was entirely free from any suffering arising out of scarcity or failure of the crops, although, in consequence of the prevalence of the epidemic fever in the north-east part of the district, some relief was found to be necessary.

1888 AND 1889.

Some relief was given in the Contai subdivision of Midnapore in 1888 and 1889, but the distress was solely due to the heavy floods of 1888, and not to failure of the rains.

There was no distress in 1892.
